STATISTICAL DEPARTMENT,
The 6th March, 1893.

H. H. RISLEY,
Offg. Secy. to the Govt. of Bengal.

Abstract of the results of Meteorological Observations taken at the Alipore Observatory in the month of February 1893.

	Inches.	Date.	Hour.
The mean pressure of the month	29·997		
The average pressure of February from 24 years' registers ...	29·945		
The highest pressure in the month	30·157	16th	10
The lowest pressure in the month	29·850	17th	16
The range of pressure	0·307		
	Hours.		
The total number of hours of bright sunshine during the month	180·8		
The maximum possible number of hours of sunshine ...	318·0		
	ϴ		
The mean temperature of the month	65·0		
The average temperature of February from 24 years' registers	73·0		
The highest temperature in the month	80·7	17th.	
The lowest temperature in the month	46·9	2nd.	
The range of temperature during the month	33·8		
The mean daily range of temperature	17·4		
The greatest range of temperature in one day	27·2	4th.	
	Per cent.		
The mean humidity of the month	76		
The average humidity of February from 24 years' registers ...	67		
	Inches.		
The mean vapour tension of the month	0·468		
The average vapour tension of February from 9 years' registers	0·538		
The mean cloud proportion of the month	3·93		
The average cloud proportion of February from 16 years' registers	1·92		
The total rainfall of the month	4·30		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	4·21		
The average fall of February from 48 years' registers ...	0·87		
The greatest fall in 24 hours	1·41	20th.	
	Days.		
The number of rainy days in the month	7		
The average number of rainy days in February from 24 years' registers			
	ϴ		
The mean maximum equilibrium temperature of solar radiation during the month	126·1		
The mean difference of sun and air temperatures	51·9		
The greatest sun temperature	139·0	17th.	
The greatest excess of sun over air temperature	62·5	26th.	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	51·8		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	5·4		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	9·9	3rd.	
	Miles.		
The mean movement of the wind per day	53·3		
The greatest movement of the wind in one day	115·0	23rd.	
The greatest movement of the wind in one hour	15·0	22nd, 11 to noon.	

The number of hours with winds from each of the 8 points—

N. 172, N.E. 78, E. 51, S.E. 23, S. 31, S.W. 26, W. 26, N.W. 54, Calm 211.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park Street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore ·003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 2·1 lower; and, finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0·6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

C. LITTLE,

For Meteorological Reporter to the Govt. of India.

* Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 01 rainfall the normal mean are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station district, *i.e.*, from total rainfall at the subdivisional stations in the district sending in returns divided by the number of stations. A rainy day is one or

for the week ending Saturday, the 4th of March 1893.

					DISTRICT OBSERVATIONS.										
					OF WEEK.				RAINFALL.						DISTRICT.

for the last ten years. The variations are *negative* when the mean for the week is less than the corresponding normal mean, and *positive* when greater. The numbers denoting cloud amount represents the part of the sky covered the whole sky being denoted by 10. Under the head District observations of for the period in question during the past ten years. The means of the district are the numerical average of the rainfall returned received in the which at least a tenth of an inch fell.

Statement of Rainfall in Bengal for the week ending Saturday (8 a.m.), the 4th of March 1893.

Meteorological Division.	District.	Station.	Rainfall. Sunday, 26th February.	Monday, 27th February.	Tuesday, 28th February.	Wednesday, 1st.	Thursday, 2nd.	Friday, 3rd.	Saturday, 4th. Explanation.—... indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the 7th March* 1893.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 4TH OF MARCH 1893.

AT the close of the previous week a barometric depression had passed through Orissa travelling in an easterly direction, and conditions in Bengal on the 25th of February, or the last day of that week, were unusually disturbed over practically the whole province. Skies were heavily clouded, and abnormal north-easterly winds prevailed over a considerable part of the province, but on the other hand pressure was in excess of the normal by amounts ranging up to about a tenth of an inch. On the 26th, or the first day of the present week, the pressure changes were decidedly irregular, while temperature had fallen rapidly, and fairly general rain had been received from the 25th to the 26th, the falls being as a rule not heavy. The effects of the depression had, however, to a great extent disappeared, and the sky was clearing rapidly on the 26th in all districts. On the 27th pressure had risen moderately and by nearly equal amounts in all districts, and temperature had also risen rather briskly. A steady north-westerly wind current had set in over the whole province except at one or two stations in Orissa, the sky was only lightly clouded, weather had become fine and settled, and rainfall was practically entirely absent. From this date up till the end of the week, the changes of meteorological conditions have been of comparatively little importance except as regards temperature, and fine and fairly settled weather has prevailed, while there has been a steady increase in the temperature. Thus for the 24 hours from the 27th to the 28th of February, the mean temperature of a large part of the province was from 10° to 12° below the normal, and this defect has been steadily reduced till on March 4th it only equalled from 4° to 6°. Pressure, on the other hand, fell slowly on February 28th and on March 1st and 2nd, but on the 3rd and 4th it commenced to increase again, and on the 4th it was in excess of the normal by amounts ranging generally from 0·12″ to 0·16″. Throughout the whole of the last five days of the week a steady westerly and north-westerly wind has been blowing over the greater part of the province, through towards the close of the week there was a distinct tendency for south-westerly winds to set in at the southern stations. Skies have also been generally only lightly clouded, and from the 26th of February up till March the 4th practically no rain whatever was reported over the whole of Bengal.

Pressure.—The variations of pressure during the week have been small, and the average pressure for the week has been in excess of the normal by amounts ranging from about 0·11″ at the eastern stations up to 0 15″ in the west of the province.

Temperature—As stated previously, has been rising steadily almost throughout the week, and the very abnormal conditions of temperature which obtained during the second half of February have partially disappeared, though even at the close of the week under review the mean temperature of the province was from 4° to 6° lower than usual. The mean temperature of the whole province for the week averaged 7·7° below the normal for the period, while in South-West Bengal and Chota Nagpur the defect has equalled nearly 10°.

The distribution of temperature during the week and its variation from the normal value are best seen in the table below, where the average maximum, minimum and mean temperatures for the week at nine typical stations in different districts of the province are compared with the normal values for the period. The defect, it will be seen, has been most marked in the maximum or day temperatures, which at such stations as Cuttack, Calcutta, Burdwan, Patna, Gaya and Hazaribagh have been from 10° to 13° in defect of the normal:—

Table showing the excess or defect of the actual mean temperature from the normal for the week ending 4th March 1893.

	Normal mean maximum temperature for the week ending 4th March.	Actual mean maximum temperature for the week ending 4th March 1893.	Variation of actual mean from the normal.	Normal mean minimum temperature for the week ending 4th March.	Actual mean minimum temperature for the week ending 4th March 1893.	Variation of actual mean from the normal.	Normal mean daily temperature for the week ending 4th March.	Actual mean daily temperature for the week ending 4th March 1893.	Variation of actual mean from the normal.
Cuttack	94·9	81·7	−13·2	69·8	66·0	−3·8	82 3	73 9	−8 4

Hazaribagh	83 6	72 3	−11·3	59·1	52 4	−6 7	71 3	62·4	−8 9
Darjeeling	51 0	47·5	−3 5	40 3	35·4	−4·9	45 7	41 5	−4 2

Rainfall.—The rainfall during the week has been small, the heaviest falls having occurred in Orissa, where they have averaged 0 63 inch. In the other divisions the falls have generally averaged about a tenth of an inch and less. Hence the only division in which the fall has been above or even equal to the normal has been Orissa, where it has been about twice as much as usual.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 4th of March 1893:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th Oct. 1892.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week	Variation.	Average.	Normal average.	Average.	Normal average.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h, 10h, 16h and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

CONTENTS.

Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal, assembled for the purpose of making Laws and Regulations under the provisions of the Act of Parliament, 24 and 25 Vic., Cap. 67.

The Council met at the Council Chamber on Saturday, the 25th February, 1893.

Present:

The HON'BLE SIR CHARLES ALFRED ELLIOTT, K.C.S.I., Lieutenant-Governor of Bengal, *presiding.*
The HON'BLE J. T. WOODROFFE, *Offg. Advocate-General.*
The HON'BLE T. T. ALLEN.
The HON'BLE H. J. S. COTTON, C.S.I,
The HON'BLE H. H. RISLEY, C.I.E.
The HON'BLE J. LAMBERT, C.I.E.
The HON'BLE H. LEE.
THE HON'BLE DR. MAHENDRA LAL SIRCAR, C.I.E.
The HON'BLE A. H. WALLIS.
The HON'BLE GONESH CHUNDER CHUNDER.
The HON'BLE P. PLAYFAIR.
The HON'BLE MAHARAJAH RAVANESHWAR PROSAD SING BAHADUR.

NEW MEMBER.

The Hon'ble Maharajah Ravaneshwar Prosad Sing Bahadur took his seat in Council.

LICENSED WAREHOUSE AND FIRE-BRIGADE BILL.

The Hon'ble Mr. Cotton moved that the clauses of the Bill for the regulation of Warehouses and the maintenance of a Fire-brigade be considered for settlement in the form recommended by the Select Committee.

The Motion was put and agreed to.

The Hon'ble Mr. Woodroffe moved that, in clause (*9*) of section 3, the word "coir" be omitted.

He said:—"It is right that I should explain how, notwithstanding that the Bill as settled by the Select Committee, of which I was a member, deals with 'coir' as an inflammable substance, this amendment comes to be moved by me. At the time when the Bill was before the Select Committee, a memorial was placed before us from the Secretary to the Calcutta Trades' Association, in which it was urged that 'coir' was not inflammable; that if thrown on a live fire, it would not blaze but only smoulder; that seventy-five per cent. of the rope made in Bengal is made of imported coir yarn, and that during the eighty years these roperies had been in existence, no fire had occurred in them.

"I believe the Select Committee were much impressed by this memorial, and they would not have included 'coir' amongst the highly inflammable substances, were it not for a fire having occurred in which a considerable amount of coir had been destroyed. Under these circumstances, 'coir' was put into the clauses of the Bill when it was passing through the Select Committee. Since then a further representation has been made on the subject, not only to myself, but also, I believe, to other members of the Council, with the result that we are satisfied that the article, though inflammable, is not of that extremely inflammable character which would justify its retention in this clause. It can, however, hereafter be dealt with under section 26, clause (*a*), of the Bill, which provides that the Commissioners may, for the purpose of further providing the cost of the fire-brigade, levy a rate not exceeding two and-a-half per cent. on buildings employed for the storage of any other inflammable substance or thing not specifically mentioned in clause (*9*) of section 3. With these explanations and observations, I move this amendment."

The Hon'ble Mr. Lambert said:—"As far as I am aware, there has been only one fire in a godown in which coir and cocoanut fibre is stored, and that occurred on the 11th of January last. It was not a very important fire; and there are not many store-houses which would contribute to this tax, if coir were included amongst the inflammable articles. On these grounds, I support the amendment."

The Hon'ble Mr. Wallis said:—"Since this question was considered by the Select Committee, it has been represented to me by one or two firms interested in the coir industry that 'coir' should not be included amongst goods of a highly inflammable nature, as coir yarn of itself will not burn. I am glad to hear the Hon'ble Mr. Lambert say that he has no knowledge of any other case of fire in a coir godown. I may mention that the fire which recently took place in Ezra Street was in a very small godown about 50 feet long by 10 feet by 8 feet in measurement, which contained 3,500 bundles of coir of 30℔ each, and 50 bales of coir fibre. Out of this, 2,100 bundles coir yarn and the 50 bales of coir fibre were untouched by fire; the remaining 1,400 bundles were damaged, but half the yarn was picked out the next day and sold: not a single bundle was wholly burnt, and the damage was chiefly confined to four inches of the ends of the bundles. The fire was caused by the mats in which the fibre was

packed catching fire, and when these were burnt, the fire was deprived of fuel, and did not spread. The godown adjoining which was only separated by a wooden door was burnt through, and yet the coir yarn in that godown, though resting against the door, did not communicate the fire to the contents. The fire broke out at 7 P.M., and for two hours after the brigade arrived there was no water available, yet the fire was put out about midnight. This shows that a coir godown is not so dangerous as to justify it being classed under the definition of 'warehouse.'"

The Hon'ble MR. PLAYFAIR said:—"I support the amendment proposed by the learned Advocate-General. Coir, I understand, is not inflammable, neither is ship-chandlery as distinguished from the articles separately mentioned under section 3, nor is linseed oil; and when the vendors of these articles realize, as their more alert neighbours have done, that their godowns and yards are about to be specially taxed for the support of the fire-brigade, it is fully to be expected that they, too, will raise a protest. I would suggest, with your Honour's approval, that 'ship-chandlery' and 'linseed oil' be also omitted from clause (*9*) of section 3 of the Bill. And if your Honour will permit this amendment to be put to the Council without formal notice, I beg leave to submit it."

The Hon'ble MR. WOODROFFE's motion was put and agreed to.

The Hon'ble MR. PLAYFAIR's motions that, in clause (*5*) of section 3, the words "nor linseed oil" be inserted after the figures "1886," and that in clause (*9*) of the same section, the word "ship-chandlery" be omitted, were also put and agreed to.

The Hon'ble BABU GONESH CHUNDER CHUNDER said:—"As the amendments Nos. 2 to 6 in the List of Business standing against my name relate to the same matter, I ask permission to refer to them together as one amendment. The matters involved in these amendments relate to the power of the Commissioners to grant or refuse licenses. The Select Committee have introduced an alteration in section 6 of the original Bill, the effect of which is to withdraw the power of granting or refusing licenses from the Commissioners and to put that power in the hands of the Chairman. The system of granting licenses to warehouses was first introduced by Act IV of 1866, which provided that licenses should be obtained from the Justices. Then Act II of 1872 repealed so much of Act IV of 1866 as related to the granting and refusing of licenses to jute warehouses, and that Act provided that it should be within the discretion of the Justices at a special meeting to grant or refuse licenses; and Act V of 1879 conferred those powers on the Commissioners at a special meeting. Act IV of 1883, which repealed Act V of 1879, also retained these powers in the Commissioners at a special meeting.

"The Committee which was appointed in 1891 under the presidency of Sir Henry Harrison recommended, amongst other things, that the power of granting licenses should remain with the Municipality, and the Bill, which was introduced into this Council by the late Sir Henry Harrison, than whom I may say, without fear of contradiction, few persons can claim greater experience in these matters, left the power of the Commissioners in this behalf untouched; but the Select Committee have thought fit to withdraw this power from the Commissioners. They, however, did not assign any reason in their Report why this power has been withdrawn from the Commissioners. They merely say that this power has been reserved to the Chairman, but why it has been taken from the Commissioners and given to the Chairman does not appear. Nor do I find anything in the statement made by the Hon'ble Member in charge of the Bill when presenting the Report of the Select Committee showing why it is that the Select Committee thought fit to take away this power from the Commissioners.

"It seems to me, Sir, that this proposal of the Select Committee is opposed to the spirit of Local Self-Government, which, I take it, it is the intention of the

Government of this Province to encourage, develop and extend as far as practicable. With reference to this provision of the amended Bill, I find that the Commissioners have sent in a report in support of my amendment, in which they say:—

'Section 8 of the Bill modifying section 6 of the present Fire-Brigade Act (Act IV of 1883, B.C.)—The Commissioners must beg leave to protest against this section, which deprives them of the power which they now possess to grant licenses to jute warehouses, and vests this power in the Chairman or in a Committee appointed with the consent of the Chairman. This provision is in conflict with the principle which runs through the whole of the present Municipal Act, by which the Commissioners in meeting direct and control the proceedings of the Chairman in all matters. Nor, indeed, has any case been made out for this change in the law. For in the only instance where there has been some hesitation on the part of the Commissioners to grant a license to a jute warehouse, *viz.*, in respect of premises No. 15, Kassi Mitter's Ghat Street, belonging to Messrs. Finlay, Muir & Co., such license was eventually granted on the conditions suggested by the Commissioners being accepted by Messrs. Finlay, Muir & Co. And even if it were admitted that the Commissioners made a mistake in this case, they submit that one isolated instance like this is not sufficient ground to justify the withdrawal from them of this power, which they claim that they have on the whole satisfactorily exercised.'

"I find that the Hon'ble Mr. Lee, the Chairman of the Corporation, was a member of the Select Committee of the Council on this Bill; but whether in agreeing with the Committee he referred the matter to the Commissioners and obtained their assent to this provision or not, does not appear. We find, however, that the Commissioners themselves protest against this alteration, and ask that the power of granting licenses be restored to them. As no reason has been assigned why this power has been taken away from the Commissioners, I submit that it ought not to be taken away; and if this view is accepted by the Council, section 9 of the Bill will be unnecessary. I therefore move that in section 5, the words 'Chairman of the' be omitted, the effect of which will be to restore the power which the Commissioners have exercised for over twenty-six years."

The Hon'ble MR. PLAYFAIR said:—"The views of the mercantile community, including the Hydraulic Press Association, upon the amendment proposed by the hon'ble member, may be found in the letter addressed by the Chamber of Commerce, dated the 22nd of September last, to the Government of Bengal, and are couched in these words which I ask permission to read:—

'In dealing with the general question of the grant of a license, the Committee of the Chamber of Commerce would point out that, under the existing Act, the machinery employed is as cumbrous and unbusiness-like as it is possible to conceive. By section 6 of Act IV (B.C.) of 1883, the granting of a license rests *within the discretion of the Commissioners at a special meeting*. It is impossible that such a system should work smoothly or well. The Committee would therefore suggest that, however the questions dealt with in this letter may be settled, there should be a provision of law confining the granting, refusing, cancelling or re-granting of licenses, if licenses are to be resorted to, to a small working committee, composed of, say, the Chairman of a municipality and three or four Commissioners holding office for a given time.'

"I believe I am correct in saying that, out of respect to these views, the Select Committee drafted sections 6, 7, 8 and 9 of the Bill now before Council, conferring power upon the Chairman of the Commissioners to grant licenses. If the procedure in the granting of licenses has been 'unbusiness-like' and 'cumbrous' in the past, when only a limited number of licenses have been required in connection with jute and cotton warehouses, the inconvenience to the public under the same system is likely to be much enhanced by the additional number of licenses made compulsory on trades specified in clause (*9*) of section 3 of the Bill. It has become all the more necessary, therefore, that the routine observed in the consideration and granting of licenses should be altered. It is a general experience that large Committees impede and protract the despatch of business; and, in public estimation, the Commissioners in general meeting have not escaped from this fault. I hold that a license should be obtainable by any person whose premises are constructed in conformity with the requirements of the Act and are situated in a locality recognized as suitable for the trade. Such license should be forthcoming promptly after inspection, and the inspection should be made on application. To protect traders from inconvenience

"The principles that have hitherto guided the Legislature in respect of the imposition of taxes and the granting of licenses under the Jute Warehouses and Fire-brigade acts are now being attacked in more ways than one. The sums concerned are comparatively small; but the principles involved are important. The first principle that has been attacked has been that the sanitary funds of the Municipal Commissioners should not be whittled away. That attack was repelled last Saturday. It will have to be met again to-day. The next principle that is attacked is, that the Municipal Commissioners of Calcutta should continue to have the control of the location of the objectionable trades in the city—objectionable from whatever cause. At present the Municipal Commissioners have the power, and exercise it, of locating hide godowns, mills for the pressing of oil, for the crushing of bones, offensive and dangerous trades of all kinds; and it is suggested that they should not have that power as regards the location of jute warehouses. There is only this difference between their powers in respect of hide godowns and the like and jute warehouses that a special safeguard is added to the public as regards jute warehouses. That, I understand, was the cause of the introduction of the words 'at a Special Meeting' in the last law; that only at a special meeting can the Commissioners give sanction to the licensing of new jute warehouses. In respect of all other objectionable and offensive trades and dangerous trades, applications for licenses come to the Secretary to the Corporation. The responsible officers of the Corporation, the Health Officer and the Engineer, report, and the Chairman, as a rule, grants or refuses the licenses without any further ado. In doubtful cases, he refers the papers to the General Committee; and the proceedings of the General Committee are then confirmed or rejected in general meeting. Now, Sir, it is proposed to make jute warehouses an exception to this general rule; and not only to take away this special safeguard, that is supposed to be added to the public by means of which the fact becomes publicly known when it is proposed to open a jute warehouse in a particular spot, so that the owners of adjacent properties might protest if need be, but it is proposed to take away altogether the controlling voice of the Commissioners as a body in respect of licenses for jute warehouses.

"The general principle, as I have shown, is, that the Chairman acts in executive matters on his own responsibility, but subject to the control, in special cases, of the Commissioners. In matters of this kind, really small matters but matters of sentiment, no wise Council, and I am sure not this Council, will interfere, unless a strong case is made out to necessitate the interference. What case has been made out? I have taken the trouble to go through the instances in which the Chairman and the Commissioners have for a time differed as to whether licenses should be granted or should not be granted to jute warehouses. I find that since the 3rd of March, 1887, there have been but four such cases; and in the end, in each of those cases, a satisfactory solution has been come to and the Chairman and the Commissioners have come in accord, the Chairman's view always prevailing. I believe that the real cause for this suggested change has been the delay regarding one particular license. In that case, a license has been granted. It was a doubtful case. I myself thought that the license should have been granted from the first; Sir Henry Harrison thought the same; the voting was very close; but it was a doubtful case; there was no cart space, and frequently it has been required that there should be cart space. It was not the licensing of a new warehouse, but simply the licensing for a particular purpose, of a shed, which had already been used for the purposes of a warehouse. It was simply that a license should be granted for sorting jute in a shed where warehouse work was being conducted. So that really it was not an extremely important matter, though much has been made of it. In regard to the Report from the Municipal Commissioners, which has already been referred to twice, I must inform the learned Advocate-General that I did not sign that Report. I did not sit as a member of the Committee when it framed the report, and I have only made two marginal notes in the report. Unfortunately, the letter with which I forwarded this Report, in my capacity of Chairman, to the Secretary of the Legislative Department, has not been put before the Council, because of an accident. The letter went to the wrong Secretary; but I explained in that letter that I did not form a member

of that Special Committee. However, the remarks of that Committee, on this particular point at all events, have my entire concurrence, where they say:—

'Even if it were admitted that the Commissioners made a mistake in this case, they submit that one isolated instance like this is not sufficient ground to justify the withdrawal from them of this power, which they claim they have on the whole satisfactorily exercised.'

"Since the year 1887, there have been refused altogether 13 applications for licenses; and four were pending when the statement, I hold in my hand, was prepared. In one case the reasons given for refusing a license were that the site was unsuitable, and no passage was left convenient for the fire-brigade. That was the one case which was refused in 1887. Five cases were refused in 1888-89; two cases because no plans were supplied; two for want of cart space, and one, because the site was both unsuitable and the cart space was insufficient. In 1889-90 one application was refused for want of cart space; in 1890-91, two were refused, one because no plan was submitted, and one for want of cart space; and last year four were refused, one for want of cart space, and three because no plans were submitted. On the other hand, the number of applications sanctioned was 24.

"Without pressing on the Council in this case the wisdom of Paschal's aphorism that 'much of the mischief of this world would be avoided if men would be but content to sit quiet in their parlours,' I trust that the Council will see that it would be discreet to let well alone. I have had to listen to a certain amount of raillery aimed at the Commissioners, of whom I am Chairman. The consideration whether it is possible or impossible to inflict physical hurt on a Corporation; whether it is possible or impossible that in the hereafter the seventy-five Commissioners can be found congregated around the throne of 'imperial Satan,' is no argument. As Chairman, I recognise the compliment offered in this proposal, but I would beg respectfully to decline it, when it involves a slur on the co-adjutors with whom I have worked daily, almost hourly, in harmony for the last three years. I support the amendment of the Hon'ble Babu Gonesh Chunder Chunder if, as I understand, he accepts the suggestion of the Hon'ble Member in charge of the Bill."

The Hon'ble Mr. Allen said:—"I am at a considerable disadvantage in dealing with the amendment before us, having very partially and indistinctly heard what has fallen from the hon'ble members who last addressed the Council, the Hon'ble Mr. Lee and the Hon'ble Mr. Cotton; and therefore I must ask to be excused if, in any way, I blunder over their explanations of the subject under discussion. The case seems to me a very simple one. The Bill, having been introduced into this Council, was referred to a chosen number of its members, in order that they might examine it closely and make their report to this Council. It is to be presumed that, in selecting the members of that Committee, the Hon'ble Member in charge of the Bill selected those whom he thought most likely to be conversant with the matters which would come before them, and most competent to offer an opinion which this Council would be wise to accept. Well, Sir, this Bill was made over to those members, and after repeated meetings, discussions and consideration of the papers placed before them, and collecting all the information that could be obtained, they have submitted a Report to this Council, and they have recommended that the granting of licenses should rest with the Chairman of the Commissioners, subject to that modification which section 9 provides. The hon'ble member opposite has, however, brought forward an amendment which, as far as I can understand his reasons, has no other foundation than the fact that, in former times, the grant of licenses was not in the Chairman but in the Commissioners. That fact, no doubt, had considerable influence with the Select Committee, and was given full weight to before they recommended any departure from the previous practice; and I think it would be singularly unwise for this Council to revert to that old discredited practice, simply because it was the old practice. I do not very well understand what the suggestion of the Hon'ble Member in charge of the Bill has been. Apparently, he is going half-way to meet the amendment, and I do not see how, if that is his intention, he can at this stage propose any change. The amendment before the Council is either to be accepted or to be negatived. When a decision has been

and possible loss, it is necessary that it should be so. It has been a great hardship to jute merchants to have to wait weeks, and in some instances many months, before a license is granted, and while the Municipal Commissioners in general meeting assembled hold an academic discussion over the application. I cannot, therefore, support the amendment proposed by the hon'ble member."

The Hon'ble MR. WOODROFFE said:—"I feel bound to oppose this motion. By grouping all these motions together, the hon'ble member has not, I venture to think, a little obscured the real question at issue. As regards the proposed amendment to section 5, for instance, it is obviously unnecessary for an applicant for a license to do more than to apply in writing to the Chairman of the Commissioners. The case is the same as regards the proposed amendment of section 6. The real question is in respect of sections 7 and 8, and the suggested omission of section 9, which provides that the Commissioners can have, and in all probability will almost invariably have, in the form of a Special Committee therein provided for, the power to exercise the functions of the Chairman under this Act with his consent. It appears to me that it is not only on the ground of the delays which have taken place in the granting of licenses, as explained to us in Select Committee, but also that there has been not unfrequently something which is described on the other side of the Atlantic as 'lobbying'—various persons putting pressure on the Commissioners to vote for the grant or refusal of licenses—that it is eminently desirable that the power of granting or refusing licenses should be vested in the Chairman, and, with his consent, in a Special Committee of the Commissioners. The Select Committee in framing this section of the Bill had in view the selection of Commissioners who, from their position, knowledge and experience, would be able to exercise proper and due control in the matter of granting or refusing licenses.

"I cannot, however, sit down without referring to the observation of the hon'ble mover of these amendments that he did not know whether Mr. Lee, who was the Chairman of the Corporation and a member of the Select Committee, had the consent of the Commissioners to vote in the manner in which he did. It seems to me that there is involved in that observation a suggestion which is not tolerable. I venture to assert that hon'ble members of this Council, whether in Council or in Select Committee, do not stand in the position of delegates, and are not and cannot for one moment be supposed to be bound by any orders or any directions emanating from any source whatever."

The Hon'ble MR. COTTON said:—"I think it possible to suggest an arrangement which may meet the suggestion of the hon'ble mover of these amendments, and also, perhaps, be accepted by the gentlemen opposite who have opposed it. I do think there is considerable force in the contention of the Hon'ble Babu Gonesh Chunder Chunder that the innovation introduced in the Bill is an encroahment on the powers which have been exercised for a great many years by the Municipal Commissioners of Calcutta; and I would be exceedingly reluctant to identify myself with any such encroachment. But this is due, I think, mainly to the fact that, as the law now stands, licenses can only be granted by the Municipal Commissioners at a special meeting convened for the purpose. This means, in effect, that the whole of the Commissioners in a body deliberate on the question, and there can be no doubt whatever that, when an executive matter of this kind is entrusted to a representative body of men like the Commissioners, it is apt to be badly handled; it is apt to be greatly delayed; and, as the learned Advocate-General has pointed out, there is great risk of what he has described as 'lobbying' or backstairs influence. I certainly think that it is very undesirable that questions of this nature should be taken up at a special meeting of the Commissioners. At the same time, I do not think sufficient cause has been made out for withdrawing the power of granting these licenses from the Commissioners altogether; and I conceive that this question of granting or refusing licenses to jute warehouses is eminently a power which should be dealt with by a Select Committee of the Commissioners appointed by the Commissioners for the purpose.

"This suggestion will, I believe, meet with the Hon'ble Babu Gonesh Chunder Chunder's acceptance, and I hope that hon'ble members opposite will not object to it. It will come to this that, instead of the power resting in the Chairman and the Chairman approving of the appointment of a Select Committee for the purpose, the power will rest in the Commissioners and the Commissioners will appoint a Committee. In this way the rights of the Municipal Commissioners will not be in any way interfered with, while the matter may expect to receive as prompt and fair treatment as it would do under the present provisions of the Bill. I may add, with regard to the question of despatch in dealing with these applications, that it is dealt with by a separate section of the Bill (section 7), to which I see no objection has been taken; and if that section becomes law, I do not think there can be any reasonable grounds for apprehending unnecessary delay in the disposal of applications for the licensing of warehouses.

"If this suggestion of mine meets with the approval of the Council, the necessary verbal alterations needed in the Bill will be drafted without difficulty by the Secretary. I do not wish to commit myself to them while addressing the Council."

The Hon'ble Mr. Wallis said:—"I think the hon'ble mover of the amendment has rather overrated the danger to municipal authority and privilege from the adoption of the recommendations of the Select Committee. The object, as I understood it in Select Committee, was to appoint a Special Committee to consider these questions of granting licenses where applications are submitted; but I cannot agree with the Hon'ble Member in charge of the Bill that a Special Committee should be appointed on each occasion. [The Hon'ble Mr. Cotton said:—'My idea was that a Standing Committee should be appointed, not a Special Committee in each case.'] Then I fail to see the difference between the proposal made by the Hon'ble Mr. Cotton and the provision contained in the Bill. As I take it, the effect of the amendment proposed by the Hon'ble Babu Gonesh Chunder Chunder would be that the existing Act shall remain in its present form. It has been shown by the Hon'ble Mr. Playfair that the working of this portion of the Act has proved unsatisfactory; that it has caused endless delays, and consequent inconvenience and loss to those applying for licenses. The object, and I think the effect, of section 9 of the Bill will be the appointment, with the sanction of the Chairman of the Commissioners, of a Special Committee which would always consider all applications for jute licenses, or the licensing for places coming under the definition of warehouses; and I think such a Committee would be better able to do the work than a Committee which may be appointed from time to time. I see that the Committee of 1891 recommended that this power should be left in the hands of the several municipalities concerned; and the proposal in the Bill provides that the granting or refusal of licenses will be in the hands of a certain number of the Commissioners specially appointed by their colleagues on that behalf."

The Hon'ble Mr. Lee said:—"At the first meeting of this Council this Session, Your Honour observed, in explaining why the Fire-brigade Bill should be proceeded with while other measures should be for the present dropped, that—

'The Fire-brigade Bill is one of purely local interest, and the interests concerned in it are interests which, I understand, will be represented in much the same way in the revised Council as they are now. I believe, for instance, that it is intended that the Calcutta Municipality shall be represented in the enlarged Council; and for that reason I obtained sanction to the appointment to the Council of the Chairman of the Calcutta Corporation to represent the Municipality while the present Bill is under discussion, in order that the Municipality may not be worse of, but may be as fully represented now as hereafter.'

"Sir, an executive officer who, during the eighteen years that he has had the honour of serving Her Majesty, has steadily set his face against the manufacture of speeches, as calculated rather to hinder than to advance work, must be but an inefficient spokesman of the Municipal Commissioners. But the duty has been thrown upon me, and I must endeavour to meet it.

passed upon that amendment, it will then be open to the Hon'ble Member in charge of the Bill to consider what modification he thinks proper. But, as far as I understand his amendment, it is, I believe, nothing more than what is already provided for in section 9. He proposes that the Commissioners shall elect a few of their number as a Special Committee to deal with the matter. That is exactly what is laid down in section 9. The section runs thus:—

'With the consent of the Chairman of the Commissioners, any Special Committee of the Commissioners, not less than three or more than five in number, whom the Commissioners in meeting shall in that behalf appoint, may exercise the powers and discretion under this Act vested in the Chairman of the Commissioners.'

"That is what I understand the Hon'ble Mr. Cotton proposes, with this exception that possibly he does not require the consent of the Chairman as a preliminary. In no way is that suggestion before the Council. The question is, whether we should accept or reject the amendment of the Hon'ble Babu Gonesh Chunder Chunder.

"Frequent reference has been made to the late Sir Henry Harrison; his sayings and opinions have been dragged into this discussion, and he has been appealed to as if he were a sort of veiled prophet whose opinions are to be accepted, simply because they were his. When the Municipal Consolidation Bill was passing through this Council, I had the opportunity of sitting day after day at that table with Sir Henry Harrison; when in Select Committee we were discussing the clauses one by one, it was his repeated remark, and a point he strongly insisted upon, that such cases as these, the making of appointments, the granting of license, executive matters of that kind, were exactly the business which Municipal Commissioners are totally unfit to be entrusted with. For whenever the case of individuals came before them, they were solicited out of doors by the parties interested.

"The learned Advocate-General has also alluded to the practice of 'lobbying,' as a possible danger. I certainly consider that the people of this country have nothing to learn from those across the Atlantic, and that the art of outdoor nobbling members is as well understood here as it ever will be in America. It is urged that, if this function be left with the Municipal Commissioners of Calcutta, the trade of Calcutta will be exposed to certain inconveniences. *A priori* it would seem to anybody that an executive matter like this is not a proper thing to be discussed by some 70 or 80 men, and carried 'yea' or 'nay' simply by a majority; yet I have no doubt that those who are interested in procuring licenses, if they go about it in the right way, would never fail to obtain a majority or be refused a license. But I cannot understand how any person, who really values the principle of Local Self-Government, can desire that such temptations to divert the Commissioners from a straightforward mode of discharging public functions should be put before them. It is not wise to trust little children in sweet shops; and certainly those who value Local Self-Government should desire to keep the Commissioners to their proper functions of advising, discussing general measures, passing general resolutions and controlling their Chairman; but not of dealing in detail with matters of this nature, where private interests are so much involved.

"The hon'ble member who last sat down has spoken as if he had been singled out, and a personal compliment was paid to him by this provision in the Bill. Has the hon'ble member a life-estate in the Chairmanship of the Calcutta Corporation? But I was not aware, Sir, that when a clause of this kind is put into a law, declaring that certain duties shall be discharged by a Chairman or other public officer, that any compliment whatever is meant to the individual who for the moment happens to be Chairman or fills the office designated. I protest against such an idea. In passing Bills here, we are supposed to make provision for something more than one or two years ahead. I am aware that the Acts of this Council have a very limited life, and there is hardly one of them which has lasted above five years without amendment. But we must not assume that this will be the fate of this Bill; and even if it exists for only five years, what probability is there of the hon'ble member opposite being the Chairman of the Municipality for that period?

"But putting all these considerations aside, I will give one reason why, in my opinion, the Chairman of the Commissioners is the proper person to be trusted with this function, and not the Commissioners. When a function of this nature is thrown upon a large body of some 70 or 80 persons, it is impossible to attach the responsibility, when that function is dishonorably, or arbitrarily, or vexatiously, performed. But when we throw the duty upon the Chairman of the Commissioners, if he acts arbitrarily, the responsibility can easily be fixed; and the fact that he is acting under this sense of responsibility is no small guarantee and security for the public. I quite believe that the Chairman of the Calcutta Corporation may be as weak, as arbitrary, and as oppressive in the discharge of his functions as the Commissioners themselves; but if he is, it is perfectly plain to see where the fault lies, and the indignation aroused by such behaviour will probably lead to a change.

"For this reason, therefore, that by throwing the responsibility upon the Chairman, we know to whom to attribute any misconduct: I say that this alone is a good ground why the Report, which has been made to this Council by the Select Committee, should be accepted and the Bill should not be altered in the sense of this amendment."

The Hon'ble MR. LAMBERT said:—"I must take leave to doubt whether the amendment put forward by the hon'ble mover represents the unanimous views of the Commissioners. The Council will notice that the question has never been brought before the members of the Corporation in meeting, nor has the Report of the Special Committee been presented to the general body of Commissioners. I believe that many Commissioners agree with me in thinking that the section of the Bill, as it now stands, is a wise one. In the first place it is of great importance that applications for licenses to store jute should be dealt with promptly, but there were many instances in which this had not been the case. It was this consideration which led to the framing of the clause which it was sought to amend. Then, again, it is desirable that licenses should be granted with due regard to the convenience of the general public, and this was what the framers of the Act had in view when cart space was required. Over and over again have applications been referred to me for my opinion by the Chairman of the Corporation, and over and over again have I urged that, in the interests of the general community, licenses should not be granted when there is no cart space and when obstruction to the ordinary traffic in the streets would ensue. These remonstrances on my part have almost invariably been disregarded.

"The jute industry is a very important interest, but in dealing with applications to store jute, other considerations come in, and persons not engaged in that trades strongly object to be shut out of the use of the streets which lead to their shops and houses for hours together by a string of jute carts. The case of Messrs. Finlay, Muir and Company has been referred to. In this case, application to assort jute in a warehouse in the native part of the town was brought forward on the 18th of April, 1890; and, strange as it might seem, it was nevertheless absolutely the case, that the license was not granted until the 23rd of February, 1893, exactly two days ago. This application was frequently before the Commissioners, and was every now and then referred backwards and forwards from the General Committee to the Special Committee, and from one Sub-Committee to another, without any result, until two days before the Council met. In July, 1890, Sir Henry Harrison, when he was the Chairman, used all his eloquence at a general meeting of the Commissioners to implore the Commissioners, in the general interests of the town, to lay aside all private feelings when dealing with matters of this kind; but a very large and influential section of the Corporation voted on that application, and it was refused It was notorious that, when such applications came up, there was much canvassing and much private influence was brought to bear; and I have reason to know that a considerable number of the Commissioners are now willing to rid themselves of all responsibility in this matter, because they find that the best interests of the town will be secured by leaving the matter in the hands of their Chairman and possibly a Special Committee."

The Hon'ble BABU GONESH CHUNDER CHUNDER said in reply:—"As I understand the suggestion made by the Hon'ble Member in charge of the Bill to be, that while the power, which I ask to be restored to the Commissioners, should not be restored to them but to a Special Committee to be appointed by them for the purpose. If that is the suggestion of the hon'ble member, then I have no hesitation in accepting that suggestion."

The Hon'ble MR. ALLEN rose to order:—"The hon'ble member, who has just spoken, has an amendment on the agenda paper which he should either leave or ask leave to withdraw."

The Hon'ble THE PRESIDENT said:—"I think we are in danger of getting somewhat out of order in the course of this discussion; but considering how far things have gone, I think it will be best in the hon'ble mover of the amendment to state the form of the amendment which he wishes to be put to the Council, and on his making his statement, I shall be prepared to decide whether that amendment should be put to the Council on the present occasion; whether the original amendment should be adhered to, or whether the discussion should be deferred to the next meeting of the Council."

The Hon'ble BABU GONESH CHUNDER CHUNDER said:—"My present proposal is this, that in section 5, after the words 'application in writing,' the words 'to a Special Committee of the Commissioners to be appointed by them' be substituted for the words 'Chairman of the Commissioners.'"

The Hon'ble MR. COTTON said:—"I should like to make a brief suggestion to the Council. If we now involve ourselves in matters of detailed drafting, we shall get into difficulties. It would be a simpler plan to decide on the principle whether the Commissioners should be directed under the Act to appoint a Special Committee to grant or to refuse licenses, or whether the power should be left as drafted in the Bill to the Chairman. The exact drafting can be determined after due deliberation."

The Hon'ble THE PRESIDENT said:—"I wish to make one remark on a collateral subject, before proceeding to the particular amendment before the Council. I wish to refer to what I venture to call the weighty and statesmanlike remarks of the Advocate-General on the subject of delegation. We are now on the eve of an important reconstruction of this Council, the details of which are at present unknown. But we are aware that there will be a considerable extension and expansion of the principle of representation, and I think it very important that it should be understood to what extent and of what character the representation ought to be. I do not venture to forecast what orders we may receive from the Secretary of State or from the Government of India on this subject. But I wish most emphatically to record my agreement with what has fallen from the Advocate-General that, however much a member of this Council may be a representative of any Corporation, or of any interest, or of any body or association existing in these provinces, he will, on his appointment as a member of this Council, act according to his lights and according to his conscience. His position ought not to be that of a delegate, and he ought not to be called upon to record his vote in accordance with the views of his constituents whom he represents, unless he heartily and personally agrees with them. His position will then be that, if he disagrees with those who sent him, he will have the power either of resigning or of persisting in retaining his appointment in opposition to those whom he represents, in the belief that they will, in the course of time, come to change their minds; and their only control over him will be, unless they change their minds, that they will not re-elect him on the next occasion. I trust we shall never be in a position in this Council in which any member can be called upon to confess, or in which any insinuation can be made that he did or did not consult his constituency, or that he is or is not acting in accordance with the votes passed in the preliminary discussions in this Council.

"Now, turning to the immediate subject before us, I think what has fallen from the Legal Remembrancer is a matter well worthy of our consideration. A Council of this kind is in some danger of falling into habits of an irresponsible debating society. It is extremely important that honorary members should realize the onerous and public position in which they are placed, and that they should come to this Council thoroughly prepared to state the views they have formed, and to put them in a form in which they can be submitted for the opinion of their colleagues. The President has, under the Rules, power to receive amendments of which notice has not been previously given, and that power I have thought it right to exercise to-day in a matter which involved a very small point of detail; and even then, I felt some doubt whether it was right to have recourse to it. But I am quite sure that it is not right that any important amendment or change of any kind should be placed before the Council which may be the subject of debate and discussion and voting in this Council without having a full and sufficient opportunity of considering it beforehand. And I feel sure that what my hon'ble friend was driving at, but did not give full expression to in his speech, is worthy of our consideration; and that is the responsibility of the position occupied by a member of the Select Committee of this Council. The Select Committee sat to discuss the Bill which was drafted for submission to the Council, and to alter and amend it at their pleasure and with all the information before them. They have power to record their views in any form they liked, and any member of the minority may dissent separately or collectively from the opinion of the majority. But I do hold that, we shall find it very difficult to carry on the business of this Council if any members of the Select Committee feel themselves individually or in a body at liberty to depart from the views to which they put their signatures, unless some important new facts are brought to their notice of which they were not aware before, and which would justify them in altering their opinion, just as much as a judge may alter in review his decisions upon facts not brought to his notice at the time of trial.

"Upon this occasion, we have a definite proposal put before us by the Hon'ble Gonesh Chunder Chunder, which involves an important principle, and it is quite possible for us to vote upon it; but a subsequent amendment which was brought forward by the Hon'ble Member in charge of the Bill, and which the hon'ble mover of the first amendment is willing to accept, is one which has not been formulated and which it will be difficult to formulate, and which it will be impossible for the Council to discuss or vote upon on the present occasion. I think, therefore, that the best plan to pursue is to put the amendments of the hon'ble member separately and not collectively; it will follow, if it is determined to retain the word 'Chairman' in the manner in which the Select Committee places it in the Bill, that the principle, which is under discussion, will have been settled, and there will remain no further opportunity for proposing that a Select Committee should be appointed on behalf of the Commissioners to exercise their powers. But if the Council decides to cut out the word 'Chairman,' not perhaps in section 5, where it naturally occurs independently of the principle before us, but in sections 6, 7 and 8, then it will be open to us to alter section 9, so as to provide that the power which the preceding sections have given to the Commissioners to grant or refuse licenses shall be exercised by a Special Committee to be appointed by the Commissioners either in each case or as a standing body for that purpose. But that amendment it will be impossible to put to the vote until it has been formally and properly drawn out."

The Hon'ble BABU GONESH CHUNDER CHUNDER'S Motion that in section 5, the words "Chairman of the" be omitted, was put and negatived.

The Hon'ble Babu Gonesh Chunder Chunder's Motions that—

(1) in section 6, the words "Chairman of the" and "of the Chairman" be omitted; also that in line 20 of the same section, the words "at a special meeting" be inserted after the word "Commissioners," and that in line 21, the words "from the Commissioners" be omitted:

(2) in line 4 of section 7, the words "Chairman of the" be omitted, and that the words "by an order in writing under the hand of the Chairman of the Commissioners setting forth the grounds for such refusal" be also omitted:

(3) in section 8, the words "Chairman of the" be omitted:

being put, the Council divided:—

Ayes 4.	*Noes* 7.
The Hon'ble Babu Gonesh Chunder Chunder.	The Hon'ble Maharajah Ravaneshwar Prosad Sing Bahadur.
The Hon'ble Dr. Mahendra Lal Sircar.	The Hon'ble Mr. Playfair.
The Hon'ble Mr. Lee.	The Hon'ble Mr. Wallis.
The Hon'ble Mr. Cotton.	The Hon'ble Mr. Lambert.
	The Hon'ble Mr. Risley.
	The Hon'ble Mr. Allen.
	The Hon'ble Mr. Woodroffe.

So the Motions were negatived.

The Hon'ble Babu Gonesh Chunder Chunder's Motion that section 9 be omit tedwas also put and negatived.

The Hon'ble Mr. Woodroffe, by leave, withdrew the Motion of which he had given notice that, for the first paragraph and the first proviso of section 10, the following be substituted:—

'The annual fee payable in respect of any license shall not exceed one hundred rupees.'

The Hon'ble BABU GONESH CHUNDER CHUNDER moved that, in line 5 of section 10, the words "five per cent. on" be inserted after the word "less."

He said:—"I thought that the wording of the section, as it now stood, was perhaps an oversight on the part of the Select Committee; for I cannot conceive that the Select Committee could have seriously meant to lay down that the whole cost of the appliances for extinguishing fires should be deducted from the annual value of the warehouse. I could well understand their proposing to deduct the whole cost of these appliances against the whole value of the warehouse; but the result of the provision, as it stands in the Bill, will be, as I take it, to deduct the capital outlay on account of appliances from the income of the property, which appears to me to be absurd. Let us take a concrete case. If the annual value of a warehouse be Rs. 3,000, the capital value would perhaps be sixteen times that amount, or Rs. 48,000; and if the owner laid out, say, Rs. 3,000 in fire-extinguishing appliances, that is to say, one year's income of the warehouse, he would be exempted entirely from paying any annual fee in respect of the warehouse, because the fee would have to be fixed on the annual value of the warehouse, minus the cost of the outlay for appliances for extinguishing fires; and there would be nothing upon which to fix the annual fee to be paid by the warehouse. I do not think that that could have been intended by the Select Committee. To allow 5 per cent. on the amount of the outlay for extinguishing fires from the annual value would, I submit, be reasonable, and therefore I propose to insert the words 'five per cent. on' after the word 'less.'"

The Hon'ble MR. WOODROFFE said:—"The principle, Sir, if I may take upon myself to be in some measure the spokesman of the Select Committee which prevailed in our minds when the Bill was going through Committee, found expression in section 10. Subject to the matter which was discussed and decided at the last meeting as to the advisability of defraying the cost of the fire-brigade by a general rate, we considered that it was above all things desirable, in the language of the letter of the Government, dated the 3rd of February, 1892, to which reference has already been made in the course of the debate on this Bill, that comparatively innocent storage godowns should not have to pay the same license fee as dangerously unprotected warehouses.

"There has already been placed before the Council very full details of the important preventive measures which have been taken by various jute warehouse owners for the protection of their premises and the prevention of the

spread of fire from them to those of their neighbours. In cases of this kind, it is not possible to protect one's self without protecting one's immediate and even more remote neighbours. It was therefore thought just that, in determining the amount on which the annual license fee should be collected, there should be taken on the one hand the annual value of the warehouse as it is assessed to the payment of municipal taxes, and on the other the capitalised value of the outlay incurred in the rendering of those premises, as far as possible, free from risk of fire.

"It is obvious that, if in any warehouse there has been an outlay incurred which renders it wholely free from the risk of fire, there is no reason why it should be subject to special taxation. Such instances, however, are probably rare. But to the extent to which immunity has been secured, justice demands that the assessable value should be obtained by deducting from the rateable value of the warehouse the outlay incurred in respect of the means and appliances therein and appertaining thereto for preventing or extinguishing fires. That result will not be obtained by merely deducting 5 per cent. per annum on such outlay from the annual value. It may happen that one owner expends many thousand rupees in fire-proof floors, fire-proof divisions, increased lengths of hose, and appliances of all sorts and descriptions for preventing and extinguishing fires; while alongside there may be another jute warehouse equally large, without any fire-preventing appliances whatever. The owner of the latter has taken no means to protect himself, and in so doing, exposes his neighbour to great risk. His position is that he has protected his jute or cotton or anything else which comes within the scope of the Bill from the effects of the weather, and that he either takes the risk of fire upon himself or insures himself against it. But that leaves out of consideration the danger to which the neighbouring property is exposed by the continuance of such a state of things. And if I understand aright the views expressed by the Council, it is proposed to impose a special duty on hazardous trades even in respect of matters of general public convenience, because there is a certain special danger appertaining to them which renders them liable to be taxed for that purpose. The hon'ble mover of the amendment has, I venture to think, failed to appreciate the reasons which led the Committee to arrive at the conclusion they did, and erroneously supposes that it would be fair merely to take from the annual value 5 per cent. on the outlay for such appliances. The section deals with two matters; first, the annual value for municipal taxes, and secondly, the outlay incurred in respect of means and appliances for preventing and extinguishing fires: 10 per cent., and subject to certain limitations, makes an assessment on the differences of these two sums. That, I submit, is a fair and just mode of dealing with the annual fee payable for a license, on the supposition accepted by this Council that there shall be a special taxation on commercial industries to meet the cost of the fire-brigade. For those reasons, I am unable to assent to the proposition of the hon'ble mover of the amendment in this matter, and will record my vote against it."

The Hon'ble Mr. Cotton said:—"I am bound to say that, in my opinion, the Hon'ble Babu Gonesh Chunder Chunder has indicated a blot in this measure. I have understood the section as drafted to convey the meaning that the license fee up to 10 per cent. per annum might be levied on the annual value of a warehouse, less the annual value of the outlay incurred in respect of protecting it. But on closely examining the section, I see that that is not the meaning the words convey; and, as the learned Advocate-General has explained, the section as it stands undoubtedly means that the total outlay incurred in providing means and appliances for preventing or extinguishing fires has to be deducted from the annual value of the warehouse on which the license fee has to be calculated. If this provision is passed into law, it will, in my opinion, stultify itself. The annual value of a warehouse, as it is assessed to the payment of municipal taxes, is 5 per cent. of the total capitalised value of the warehouse; that is to say, if a warehouse is constructed at a cost or an estimated cost of one lakh of rupees, the annual value to which it is assessed by the Municipality is Rs. 5,000. Now, Sir, it may well be that in such a warehouse the proprietors have incurred an expense

of Rs. 5,000 for its protection from fire; it may be that they have incurred an expense of Rs. 10,000. In such a case the warehouse would, if this section were to become law, be entirely exempted from taxation. Now that certainly was not the meaning of the Select Committee.

"The suggestion that a deduction should be made from the annual value on account of costs incurred for the protection of warehouses from fire was made by my friend the learned Advocate-General, and it commended itself to the unanimous sense of the Committee on the ground that it was only fair and reasonable that a deduction should be made on account of expenditure so incurred; but I, for one, and I believe I speak on behalf of other hon'ble members of the Committee, never understood that the whole value should be deducted from the annual value of the warehouse. If the section of the Bill, as it now stands, be passed, it will mean this, that wherever an expense of 5 or 10 per cent. on the total value of the warehouse is incurred for fire-preventing appliances, there the warehouse will be entirely exempted from the payment of any special license-fee. The hon'ble mover of the amendment has conveyed the meaning I had in my mind when I assented to the provision of the Bill by inserting the words 'less 5 per cent. of the outlay.' We might have more correctly said less the annual value of the outlay, which I thought the words meant. But I see that the words in the section do not convey that meaning, and therefore I accept the amendment of the Hon'ble Babu Gonesh Chunder Chunder."

The Hon'ble Mr. Playfair said:—"I do not agree with the Hon'ble Member in charge of the Bill. I understood that the cost of private fire-engines and other appliances was to be deducted from the annual value of the warehouse. If these amendments were carried, it would be a departure from the principle on which the Bill is drafted. I do not think a building would be entirely free from taxation. It will come in for taxation under clause (*a*) of section 26; so that it will not be entirely exempt."

The Hon'ble Mr. Wallis said:—"As a member of the Select Committee, Sir, I understood that if the cost of a warehouse is shown to be a lakh of rupees, and the cost of appliances provided for extinguishing and preventing fire was put down at a cost of Rs. 5,000, the value of the property for the purposes of assessment would be Rs. 95,000, and upon that value the fees under the Act would be levied."

The Hon'ble Mr. Lee said:—"My understanding of the intention of the Select Committee is the same as that of the Hon'ble Mr. Wallis."

The Hon'ble Mr. Lambert said:—"I also understood the intention of the Select Committee to be the same as explained by the Hon'ble Mr. Wallis."

The Hon'ble Mr. Allen said:—"It appears to me that the mistake has arisen from the use of the words 'annual value' instead of 'capitalised value' by the members of the Select Committee. On the other hand, it is necessary to notice that some of the outlay for the prevention and extinguishing of fire may be of a recurring character, as, for instance, the expenditure on the employment of chaukidars and the establishment for working fire-engines, while the outlay on the engines and other appliances themselves will be incurred once for all. The principle of the amendment would be fair if 10 per cent. of the capitalised value of the appliances were taken, but the recurring items would form an annual charge."

The Hon'ble Babu Gonesh Chunder Chunder in reply said:—"The learned Advocate-General's amendment to my amendment amounts to this: that if all the warehouses in Calcutta and the Suburbs only spent a sum equivalent to the annual value of the warehouses, they would all be exempted from the payment of taxation on this account; and the provision of the Bill that 50 per cent. of the expenditure on the fire-brigade should be contributed by certain trades

would be nullified. I do not think it was ever intended that a house in which a hazardous trade is to be carried on would be exempted from the payment of any license fee, if a certain amount of money were expended in providing certain appliances."

"The Hon'ble Mr. Allen's objection amounts to this: he says that, instead of the 5 per cent. being taken from the annual value, the same should be taken from the capitalised value of the warehouse. [The Hon'ble Mr. Allen said:—'I take no objection to the principle of your amendment.'] As the Hon'ble Mr. Cotton has told you, the principle upon which the warehouse is assessed is by taking 5 per cent. of the cost of the building. If that be so, it is only fair that, on the outlay for appliances, the same rate should be taken. When you have to deduct the outlay for the expenditure on account of certain appliances of a warehouse, it is only fair to deduct 5 per cent. upon the outlay for those appliances. If the assessment were to be fixed upon the whole value of the warehouse, then, no doubt, the whole expense of the outlay for appliances would be deducted. But when you are dealing with the income of the property, which the annual value represents, you can set against that only the annual value of the outlay for appliances. On no principle can you deduct the capital value of the outlay for appliances from the income of the property. Therefore, I submit that 5 per cent. on the annual value is a reasonable sum to allow for such outlay."

The Hon'ble THE PRESIDENT said:—"It appears that the majority of the Select Committee meant to apply to the words a different meaning from what the Advocate-General understood them to mean; and as we are dealing with a matter which is a question of words, it behoves us to be extremely careful in drawing up an amendment. It is suggested by the Hon'ble the Legal Remembrancer that the sum to be deducted should be not only a proportion of the capital outlay, but also the recurring cost of the establishment kept up for working the appliances and for keeping watch; and in order that this may be properly considered and the necessary amendments be formulated, the consideration of the question will be postponed to the next meeting of the Council."

The further consideration of the Motion was postponed.

The Hon'ble BABU GONESH CHUNDER CHUNDER also moved that, in the first proviso to section 10, the words "that the annual fee payable by any owner or occupier in respect of any license shall not exceed seven hundred and fifty rupees and" be omitted.

He said:—"Under this Act we have to raise a specified amount by imposing a percentage rate on the annual value of warehouses. That being so, the provision which I am seeking to amend is opposed to one of the fundamental principles of political economy, namely, equality of taxation. The effect would be to make warehouses of larger value bear a less share of the burden to the loss and detriment of less valuable property. I think I shall best express my meaning by putting certain figures before the Council. Let us say that there are 100 warehouses to be assessed of the total annual value of 5 lakhs, and that the sum required to be raised for the purposes of this Act is Rs. 30,000 a year; that five of these houses are of the annual value of Rs. 15,000. If we assess these 100 houses, which I have already stated to be of the total annual value of 5 lakhs at a uniform rate of 6 per cent., we will get Rs. 30,000, the amount required for the purposes of the fire-brigade. But if five of these houses are of the annual value of Rs. 15,000, the tax on each of these houses, taking it at 6 per cent., will be Rs. 900, and if a maximum limit of Rs. 750 is prescribed in the Bill, these five warehouses will pay Rs. 150 a year, less than what a rate of 6 per cent. will produce. Therefore, the less amount of Rs. 750, which these five warehouses will pay under that limit must be borne and paid by the other 95 houses. Because all the warehouses together will have to pay Rs. 30,000 towards the fund, and the amount which these five warehouses will not pay, calculating the rate at 6 per cent., will have to be levied from the other 95 warehouses; that is to say, they will have to pay 3 annas per cent. more than 6 per cent.; so that these 95 warehouses will have to pay Rs. 6-3 per cent., whereas the

other five warehouses of the assessments of Rs. 15,000 each will get off by paying merely at the rate of 5 per cent. Therefore, it will be unreasonable and inequitable to assess the more valuable warehouses at a less rate than the less valuable warehouses, and this will surely be the result if this maximum limit were allowed. I therefore move that the words indicated in my amendment be omitted from section 10."

The Hon'ble MR. WOODROFFE said:—"I think it desirable that there should be no misunderstanding in this matter. When the Bill was in Committee, detailed statements were laid before us—statements showing the deficiency which would arise from making Rs. 500 the maximum, the limit which was first suggested. After consideration, we adopted the limit of Rs. 750. There must in some instances be some inequality in the incidence of this tax; but that is only one of the many difficulties which must be encountered in any attempt to impose differential taxation. From the figured statement in which the Rs. 750 limit was adopted and upon which this section was based, the sum required for the maintenance of the fire-brigade would be met if the rates therein mentioned were imposed to the extent therein allowed. We were assured by the Commissioner of Police, who from his intimate acquaintance of the matter could speak with authority, that the expenses of the fire-brigade are now ascertained, and that there is no room for any great alteration. The Select Committee was assured that, with a maximum limit of Rs. 750 on warehouses, and the levy of a quarter per cent. on bastis and one-and-a-half anna per cent. on pucca buildings, the expenses of the fire-brigade would be met. If the statements which had been submitted were correct, there will be a surplus over the expenses of the fire-brigade, and there will be no necessity of taxing these industries to the uttermost."

The Hon'ble MR. LEE said:—"As a member of the Select Committee, I was opposed to any limit, and if I had correctly understood the responsibility attaching to a member who signed the Report, I would have recorded a dissent on this and other matters. It was as representing the views of the majority, and because I did not wish to obtrude in a separate note of dissent my opinions in every point on which I disagreed with that majority that I refrained from writing a note of dissent. I thought that Rs. 750 was a very much better limit than Rs 500; but I could not but say, and say to the end, that, in my opinion, it is hardly fair to relieve the rich at the expense of the poor. The calculation which I have now heard from the hon'ble mover of the amendment seems to be quite clear that the owners of small warehouses, whether of jute, hide, wood or coal, would pay; under the present drafting of the Bill, over 6 per cent. on the annual value, whilst the owners of exceptionally valuable warehouses, would pay less than 5 per cent. on the annual value. The maximum that can be levied on warehouses is to be at the rate of 10 per cent. on the annual value, and it is not to exceed altogether one-half of the cost of the fire-brigade. As it is, we find that jute warehouses yielding 10 per cent. on the valuation are in themselves able to meet the whole cost of the fire-brigade. Here, as has been observed, they are not to pay more than half the cost, and it results that nobody could pay more than 5 per cent. unless you bring some other controlling influence, such as that which is brought in here. If the proposal of the learned Advocate-General, which was the first suggested, that no one should pay more than Rs. 100, then the poorer class of warehouses would have been, as the hon'ble member (Mr. Playfair) pointed out at the last meeting, most grossly and unfairly assessed in comparison with the rich. This limit of Rs. 750 would only lessen the unfairness, but will not remove it. I therefore hope I may be considered to have the liberty of voting with the hon'ble mover of the amendment."

The Hon'ble MR. PLAYFAIR said:—"I endorse the views expressed by the learned Advocate-General. I think the speech of the hon'ble member, the Chairman of the Corporation, is somewhat in accord with the views expressed by the minority at the meeting of this Council a week ago. We have already got a differential tax, and, as I said at the last meeting, we shall be taxing the owners of small warehouses more than the rich."

The Hon'ble MR. ALLEN said:—"The mover of this amendment has appealed to political economy and principles of taxation in support of his proposal; but the Chairman of the Corporation endorses this amendment on a new principle. It is this: that having got the jute industry, which hitherto has provided all the funds required for the fire-brigade, under their thumb, it should be kept there. But, Sir, the measure is in no sense one of taxation, and the only reason why I voted against the Advocate-General at the last meeting was that the principle underlying this Bill is that men who introduce a special danger into a community are bound to contribute towards neutralising that danger. The measure of contribution should be determined by the extent of the danger. So far from large jute warehouses and mills causing danger in proportion to their size and value, probably the exact opposite takes place, because the more valuable are better provided with means against the danger more or less incident to all jute warehouses. Therefore, it is not fair that the more valuable properties should pay an unlimited rate to the full extent of their value. The value of a property should not enter into consideration, except to a limited extent. It is perfectly fair that the more dangerous class of warehouses, from which there is greater probability of fires, should pay as much. What has taken place in some municipalities where jute mills and factories are located is possibly known to more than one member of the Council present. If the 10 per cent. rate be allowed to run up according to the value without any limit, the effect will be simply to throw the whole charge on a few valuable warehouses and to exempt small ones."

The Hon'ble BABU GONESH CHUNDER CHUNDER in reply said: "It seems to me that the argument of the learned Advocate-General in opposing the present amendment would apply very well if the question were one between inflammable trades on the one hand and other trades on the other which would have to pay the tax. But these arguments cannot apply as between inflammable trades themselves. The question involved in this amendment is whether or not there should be equality of taxation between those persons. If all the most valuable warehouses were provided with appliances for the prevention of fires, it would no doubt be a good ground for asking that they should not be taxed more than a certain amount; but as the Council understood from the learned Advocate-General, when the last amendment was under consideration, that it so happens that one warehouse provides itself with all kinds of appliances against fire while the adjoining warehouse has nothing of the kind. It would therefore be inequitable not to tax small and large warehouses on the same scale, or to limit the tax on large warehouses to a certain amount only. The Hon'ble Mr. Allen seems to think that an unlimited rate of taxation would be imposed on the large warehouses, but it was not so because the rate would be uniform. What is wanted is that the same rate should be put upon all warehouses irrespective of its value or condition. But to impose a less rate of taxation on warehouses of large value and a higher rate on smaller warehouses would be wrong principle."

The Motion being put, the Council divided:—

Ayes 5.	*Noes* 6.
The Hon'ble Maharajah Ravaneshwar Prosad Sing Bahadur.	The Hon'ble Mr. Playfair.
The Hon'ble Babu Gonesh Chunder Chunder.	The Hon'ble Mr. Wallis.
The Hon'ble Dr. Mahendra Lal Sircar.	The Hon'ble Mr. Lambert.
The Hon'ble Mr. Lee.	The Hon'ble Mr. Risley.
The Hon'ble Mr. Cotton.	The Hon'ble Mr. Allen.
	The Hon'ble Mr. Woodroffe.

So the Motion was negatived.

The Hon'ble BABU GONESH CHUNDER CHUNDER also moved that, in line 5 of section 10, the word "seventy-five" be substituted for "fifty."

He said:—"As this amendment of mine is based upon the figures furnished to me by the Hon'ble Mr. Lee, I shall expect him to explain to the

Council in detail those figures. I shall only content myself by pointing out to the Council that the Committee of 1891 recommended that the whole of the expense of the fire-brigade should be met in this way, namely, 40 per cent. by jute warehouses; 20 per cent. by other inflammable articles, except hay, straw, wood and coal; 10 per cent. by hay, straw, wood and coal, and 30 per cent by the Municipality. That was the recommendation of the Committee. The original Bill, which was based on those recommendations, provided that 60 per cent. should be paid by jute, cotton and other inflammable articles, not including hay, straw, wood and coal, and that the remaining 40 per cent. be paid by the Municipality; the Municipality being entitled to recoup itself to the extent of 10 per cent. from hay, straw, wood and coal. The Select Committee, by their amended Bill, have taken away hay, straw, wood and coal from the Municipality, and included them within the hazardous articles coming under the Act; and they have fixed the liability upon those articles at 50 per cent., leaving the other 50 per cent. to be recovered from the Municipality; so that, in lieu of 70 per cent., the trade in hazardous goods will have to pay only 50 per cent.

"According to the figures in the Hon'ble Mr. Lee's statement, if jute and other hazardous articles enumerated in the Bill were made to pay 70 per cent. instead of 50 per cent., jute alone would pay Rs. 30,000 instead of Rs. 68,900, which they are now paying. I submit, therefore, that it would not be unreasonable to raise the rate from 50 per cent. to 75 per cent. to the relief of persons who are owners of other properties."

The Hon'ble MR. LEE said:—"None of us who had the pleasure of listening to the lucid speech with which the Hon'ble Member in charge of the Bill opened the proceedings last Saturday week but must have been struck by the great discrepancy between his speech and the figured statement that accompanied it. The speech represented the views of the Select Committee. The figures, as I shall presently show, are at variance with the prevailing note that runs through the speech. Mr. Cotton says:—

'It appeared to us that, in imposing a tax for the maintenance of a particular object, the fair and reasonable principle would be to apportion that tax on different members of the community in proportion to the advantages which it is estimated they will gain from that object.'

"And later on, after explaining that the fire-brigade at its present strength is entirely due to that industry, he observed:—

'In the Report which I now have the honour to lay on the table, we have stated that we think that it is unfair to levy the whole rate on any one industry. At the same time I must distinctly affirm that the fire-brigade was established in Calcutta in order to meet the requirements of the jute trade; and that the great majority of important fires occur, and always have occurred, in jute warehouses. If it were not for these jute warehouses, I do not hesitate to say that the maintenance of the fire-brigade on anything like its present scale would be unnecessary. I do not know whether I am justified in saying that this city would be in a position to go back to the state of things which existed twenty years ago; but certain it is that the brigade, in its present state of efficiency and completeness, would not be required. It is on account of the jute warehouses that the brigade is maintained in its present organisation. For these reasons, the majority of the Committee considered that the jute industry should still continue to pay a large proportion of the funds required for the maintenance of the fire-brigade.'

"And then, in dealing with the contributions from other persons assessed to the fund, he observed:—

'The individual risk which any individual house-owner may run in this city may be infinitesimal. Residential house-owners in Calcutta do not insure their houses, either in the north of the town, where the permanent residents of Calcutta mostly dwell, or in the south, where European residents live; and I believe I am well within the truth in saying that the insurance of houses and furniture in this city is practically unknown.'

"After a few more remarks, he observed:—

'The circumstances are amply sufficient to justify the Legislature in imposing a very low rate on the rate-payers at large to assist in meeting any deficit which the other means of taxation placed in the hands of the Municipality may fail to supply. The protection which

ordinary householders derive from fires not being allowed to spread may be inappreciable in any particular case. but it is obvious that such a general risk exists, and that it is at all times within possibility that fires may break out in residential houses.'

"Now, with such a statement as this, why is it that the demand made from the general fund to the account of the brigade is so heavy? If a considerable proportion is to be borne by the jute industry, it is of the same value as the water in the Irishman's peg—a thimbleful of the Rs. 41,600 to be levied in Calcutta: the jute trade is to pay but Rs. 8,600! Taxes on other property are to pay Rs. 25,000, and Rs. 8,000 are to be drawn from warehouses of hay, straw, wood and coal.

"These latter now pay the Commissioners annually about Rs. 13,000, and we are to lose the odd Rs. 5,000—for what reason, I know not. Nobody asks for the reduction. Thus it will be seen that the Commissioners suffer a loss of Rs. 38,000, for the general ratepayer, whether basti-owner or the owner of other property, is to pay Rs. 25,000, and the Rs. 13,000 now realised from hay, wood, straw, &c., depôts is to be withdrawn from the Commissioners; Rs. 8,000 of it being paid to the fire-brigade fund, and the remainder dropped altogether. I say, therefore, that the speech of the hon'ble member is not in accord with his figures. Therefore, I feel myself entitled to oppose this provision of the Bill, though my name is to be found affixed to the Report which accompanied it.

"There is another reason why I am entitled to press the amendment of the Hon'ble Babu Gonesh Chunder Chunder. I was under the impression, which impression turns out to be wrong, that the sum levied now from jute warehouses was pressing so hardly on them that it had the effect of driving them from the city. That, I thought, would be an important fact. I should be extremely sorry to see any portion of the industry put out of an area which it otherwise would have chosen for itself. But I find that since the year 1872 there were in Calcutta 114 warehouses, and in the Suburbs 52. They did diminish up to a certain point, but since the year 1888-89, I find that the numbers have been these:—In Calcutta proper in 1888, there were 69 licensed warehouses; at the present moment there are 80 in the town proper. In the suburban area in 1888, there were 112 warehouses. There came 25 of them to Calcutta at the time of the amalgamation. They have increased to 31. There were 73 of the 112 at Cossipur-Chitpur, and these have increased to 85; the balance (except one) are at Manicktollah; so that the pressure on the jute industry of the existing taxation has not been oppressive to any perceptible degree, and it has not repressed the natural expansion of trade in Calcutta.

"As regards the figures which have been quoted by the hon'ble mover of the amendment, I would say that the sum of Rs. 68,900, levied from jute under the existing law, is perhaps comparable with Rs. 30,000 which his amendment would produce from jute. But I would prefer to compare the Rs. 30,000 with Rs. 66,550, which is the amount of the direct license fees now levied. There are other extra assets of the jute fund, which go to make up the Rs. 68,900, which is leviable and is being paid by jute. This will show that if the Hon'ble Babu Gonesh Chunder Chunder's amendment be carried, the relief to the jute trade will be over 50 per cent. of the tax they are now paying; and that, I think, will be sufficient.

"But there is a further fact to bear in mind in connection with other warehouses. The fees shown, as leviable from these warehouses are now over Rs. 14,000. The amount actually collected—and here I would draw the attention of the Hon'ble Mr. Playfair to the fact that you must not confuse the amount leviable, whether by taxation on the general rate or from special industries, with the amount which actually comes into the coffers of the Corporation—is about Rs. 13,000; and if these rates now recommended be fixed, it will bring in from them about Rs. 12,000. The remainder will be a relief to those industries. But I know of no necessity for affording them any greater relief at the expense of the general rate-payer.

"I have claimed the support of the majority of the Select Committee to the present amendment on the ground of true consistency with their views. The mere fact that the Bill, as it has been amended, will result in certain figures which

the Hon'ble Member in charge of the Bill has laid before the Council, does not compel them to sanction those figures. We have seen, in respect of the last motion but one, that the Bill did not express the views of the majority of the Select Committee; and, similarly—I can speak of only one member of the majority—I venture to urge that the Bill as now drafted does not really represent the views of the majority."

The Hon'ble MR. COTTON said:—"I am not surprised at the speech of my hon'ble friend the Chairman of the Corporation. I am not surprised that he should support the amendment moved by the Hon'ble Babu Gonesh Chunder Chunder. But I am somewhat surprised that he considers that the opinion of the majority of the Select Committee coincide with his view on this subject. There was no question more discussed, more disputed in Select Committee than the proportion, the maximum proportion of the expenses of the fire-brigade, which should be leviable on account of licenses for warehouses; and, as I thought, it was unanimously agreed that the amount should not exceed half, or as the Bill puts it, 50 per cent. of the total amount. The Hon'ble Mr. Lee and the Hon'ble Babu Gonesh Chunder Chunder represent, as in my humble judgment they are entitled if not bound to do, the opinions of the Calcutta Municipality. That Municipality is very largely interested in the discussions now going on in this Council, as well as the mercantile community so ably represented by the Hon'ble Mr. Playfair and the learned Advocate-General.

"I was obliged, as it appeared to me in the interests of fairness, to oppose the hon'ble members who represent the mercantile community in the proposal which was brought forward last week that the whole burden of the fire-brigade should be borne by the general rate-payers; and to-day I feel myself equally bound to oppose the motion brought forward on behalf of the general rate-payers, that is to say, that an unduly large proportion of the cost of the fire-brigade should be borne by certain special industries. When I find myself as it were between two fires—when I find that the line I have endeavoured to take up is attacked by the mercantile community on the one hand and by the Corporation on the other—I am more and more confirmed in the belief that the middle course I have endeavoured to steer throughout these discussions is the safe and fair one. Certain it is that one of the main objects we have always had before us in our deliberations is to relieve the jute industry from the undue burden which has been cast upon it in the past. The more I reflect over it the more I feel that the jute trade has been unfairly taxed by the burden which it has borne for so many years, by not only maintaining the whole of the fire-brigade but the cost of the establishment maintained by the Municipality, of which a very considerable share has gone into the coffers of the Municipality; and also by the appropriation of considerable surplus funds paid by the the jute industry, which have been devoted to local improvements in the town. Something like Rs. 1,26,000 has, as you have been told, been diverted from the Fire-brigade Fund in this way; and I do think the mercantile community have some cause for complaint; and this being so, I understand that the unanimous opinion of the Select Committee, which considered very carefully how far we could readjust and alleviate the burden now borne by the jute industry, was that fees from warehouses should not exceed 50 per cent. of the funds required.

"We thought, and I hope you will by a decisive majority confirm our recommendation, that the license fees from warehouses, not only jute and cotton, but also all those specially inflammable materials mentioned in clause (9) of section 3 of the Bill taken together, should not contribute more than one-half the amount required for the maintenance of the fire-brigade. This is one of the most important principles in the Bill. If that is abrogated and set aside, and it is decided that such fees should be maintained at the larger proportion of 75 per cent., then I hope the community, which have been so long agitating in this matter, will justly renew the complaints so often made. They are not, I am aware, satisfied with the particular proposals made in this Bill. No one, as I said before, will ever be satisfied when he is called upon to pay a rate, or tax, or fee, or whatever it may be called. It devolves on the Legislature to impose these rates and fees with the greatest possible amount of fairness, and that is what we have endeavoured to do. The best proof of our

success is that both sides object. I attach very great importance to that fact. It is not at this stage of the Bill that I deem it necessary to detain you to show how largely the fire-brigade is used in extinguishing other fires than those from jute warehouses. My remarks under this head may be postponed until we discuss the rates proposed to be levied on bastis and on the general community. I confine my remarks now to what I consider to be the injustice of raising the proposed fees to be levied on account of licenses from warehouses."

The Hon'ble MR. WOODROFFE said: "Sir, it is with great pleasure I find myself at one with the Hon'ble Member in charge of the Bill on this occasion. The only point I take exception to is that I do not claim the honour of representing the mercantile community. I was hitherto under the impression that I occupied an entirely different position. But I would desire to add my voice to the observation which has fallen from the Hon'ble Mr. Cotton as to the suggestion that the adoption of 75 per cent. would be in accordance with the principle which guided the Select Committee is without the slightest foundation. The matter was long and carefully discussed, and we arrived at the conclusion, which is enunciated in the Bill, subject to the principle which was raised by the dissentient minority of the Select Committee. But once that principle was negatived in the Select Committee as it was negatived here, we proceeded on the principle which the Hon'ble Mr. Cotton has affirmed that a contribution not exceeding 50 per cent. from warehouses would be fair. In this particular instance the mercantile community has adopted that middle course which so commends itself to the Hon'ble Member in charge of the Bill. The Hon'ble Mr. Playfair has not, I observe, moved any amendment to reduce the rate from 50 per cent. The principle once being accepted, I think it would be well, in any case in which the Select Committee has come to a unanimous conclusion, that we should, as far as possible, avoid accepting any principle of a different character.

"The hon'ble mover of the amendment has referred to certain figures which he says were laid before us by the Hon'ble Mr. Lee. I can only say that I have not seen them. Those figures have not been, so far as I am aware, placed before the Council. I therefore support the Hon'ble Mr. Cotton in the view he has taken. The Hon'ble Mr. Lee spoke as if there had been a deprivation of the income the Corporation was entitled to in the shape of fees from hay, straw, wood and coal depôts. It has been conceded that these trades are not noxious trades. The only ground upon which fees upon them were levied was the inflammable nature of those materials; and yet these fees which were imposed year after year by the Corporation were not devoted to the fire-brigade. For these reasons I shall vote against the amendment."

The Motion was also put and negatived.

The Hon'ble BABU GONESH CHUNDER CHUNDER also moved that section 20 be omitted.

He said:—"It seems to me that the provisions of this section will be very hard and oppressive on the owners and occupiers of warehouses. Before I put forward any argument of my own, I would lay before the Council the Memorial of the National Chamber of Commerce. They said:—

'*Section* 20.—This is altogether new. It will be a fearful instrument of oppression in the hands of subordinate police officers and constables, and lead to frivolous prosecutions. It is an admitted fact that the whole length of the Strand Road, from the Bonded Warehouse to Hatkholla, the whole of Burra Bazar, Jorabagan and Hatkholla, Komertolly, Chitpore and Belliaghatta, and other busy centres of trade and commerce, and all thorougfares near godowns are more or less blocked up with carts, and the right of public traffic is thereby obstructed. This is a necessary evil incidental to a large place of business like Calcutta; but no one has ever complained of such obstruction or ever entertained the idea of prosecuting any member of the mercantile community for such an offence.'

"We all know that most of the existing jute warehouses have no separate places for loading and unloading carts, and that notwithstanding this licenses are given, and the result will be that they will be subject to daily prosecutions because they will not be able to help themselves; and furthermore

I say that the provisions of this law will clash against the provisions of the Calcutta Police Act IV of 1866, section 66, clause 7, which provides that 'whoever causes any cart or truck, with or without horses or cattle, to remain or stand longer than may be necessary for loading or unloading, except at places lawfully appointed for the purpose, shall be liable, on summary conviction, to punishment.' So that, under the provisions of this Act, people are allowed to keep their carts in public thoroughfares for the purpose of loading and unloading. It appears to me that the provisions of section 20 of this Bill clash with the provisions of the Police Act; for the Police Act allows carts to be on the streets for the purpose of loading and unloading, whereas the present Bill would prohibit it. I therefore submit that, having regard to the fact that the Merchants represented by the National Chamber of Commerce raise the objection, this section ought to be omitted."

The Hon'ble Mr. Lambert said:—"That the Council has heard from the Hon'ble Babu Gonesh Chunder Chunder that he brings this motion forward chiefly on behalf of the Bengal National Chamber of Commerce, but I cannot ascertain that any other public body has objected to this section. The letter of the Honorary Secretary of that Association says that the section is altogether new. This is hardly a correct way of putting it. Clause 3, section 6, of Act IV of 1883, requires that space be reserved for carts, and by section 14 of the Act, whoever breaks any conditions of the license renders himself liable to prosecution and fine up to Rs. 50. In the present Bill also, obstruction of a thoroughfare is made punishable, but the penalty is reduced to Rs. 10.

"Next it is said that 'it will be a fearful instrument of oppression in the hands of subordinate police officers and lead to frivolous prosecutions.' But this is not so. All that the subordinate police will be able to do will be to report whether obstruction has been caused. Enquiry will follow, and no summons will be asked for unless, in the opinion of the Commissioner or Deputy Commissioner, a case is established. The section confers no power of summary arrest. At present the unfortunate cartman, and not the man for whose benefit the obstruction is caused, is punishable.

"Further, the letter says that no one has complained of the want of any such provision. That is a mistake. Complaints are frequent, and have been so for many years past. They come in from various sources, generally from the residents of the locality and from tradesmen, and in some cases from the Municipality. I have in my hand a list of cases of obstruction during the last six months from the Koomartolee Section. It shews from August 1892 to January 1893 that 103 cartmen have been prosecuted, and six owners of jute warehouses were also successfully prosecuted for the same offence. Further, in his letter the Honorary Secretary says that in all the busy parts of the town, streets are congested by traffic. This is true, but it is only in the locality of jute warehouses that one or two owners appropriate a whole street for hours together by a long string of carts. The persons who are responsible for these obstructions ought to be easily reached, and that is the aim of section 20 of the Bill. If this section becomes law, rules will be provided for each locality, by which the owners or occupiers of jute warehouses will know how to conduct their business without interference from the police; and the convenience of the public will also be recognized.

"It has been suggested that this section of the Bill will clash with the Police Act; but it merely cannot be the intention of the Police Act that whole strings of carts shall be allowed to stand on a street for hours together while loading and unloading. I apprehend it refers to one or two carts and not to a long line of carts. I think that this section is wanted to show the owners of jute warehouses that they have a special liability, and that they should conform to such regulations as are required for each locality. As I said before, if this section becomes law, special regulations will be drawn up for each locality, and no punishment will be awarded so long as they comply with those regulations."

The Hon'ble Mr. Woodroffe said:—"The question which is involved in this amendment commends itself to me. The words used in this section are

'whoever impairs or causes to be impaired the right of public traffic.' I do not read those words in the sense in which the hon'ble member the Commissioner of Police, does. I take it that roads are made for the public; nor am I aware that any person who has occasion to use carts on the roads in Calcutta is restricted to the use of one cart at a time. All members of the public have a right to use any public road, subject to the use thereof by all other members of the public.

"The Bill provides that space shall be reserved for the loading and unloading of carts on land appertaining to warehouses. That does not mean that the public roads shall not be used by more than one cart at a time. Section 66, sub-section 7, of Act IV of 1866, imposes a fine upon any person who causes any cart to remain or stand longer than is necessary for loading or unloading, except in a place lawfully appointed for the purpose so as to cause obstruction in a thoroughfare. From the difference in opinion between the hon'ble mover of the amendment and the hon'ble member, the Commissioner of Police, it is evident that this clause (section 20) is read in a different light from what I understood in Committee. But seeing that the section is capable of the construction which the Commissioner of Police puts upon it, I shall support the hon'ble mover of the amendment. It was never understood that the business of a warehouse should be stopped after each cart was unloaded and another cart fetched."

The Hon'ble Mr. Cotton said:—"I think this question is by no means free from difficulty, and for my own part I am much influenced by the opinion expressed in the letter of the National Chamber of Commerce. It is true that the Municipal Commissioners were, in the early days of the Municipality, in the habit of granting licenses very freely for jute warehouses; and that in a very large number of cases no provision whatever was made for cart space, that is to say, there was no space whatever within the premises where carts could enter and turn round. I conceive that the Municipal Commissioners erred in their discretion in the interests of jute and commerce, and granted licenses more freely than was prudent. I have inspected some of these warehouses, and have found the bulk of the carts loaded with jute waiting outside. That is a serious matter. I confess that the representation of the National Chamber of Commerce has influenced me very much on this point. I had not realised until I read their memorial and received a deputation of their members how keenly this question would be felt; and I do think that the power of prosecuting the owners or occupiers of warehouses, under such an exceptional provision as this, should not be conferred without further deliberation. I can understand that a carriage or cart which blocks the way, and will not move on when ordered by the police, may be run in; but I do not know whether it will be wise or whether it could be justifiable to prosecute the owner or occupier of a warehouse under a penal provision of this kind.

"The section found its place in the Bill in this way. Under the old law it was a condition of granting a license that there should be sufficient space for the loading and unloading of carts. We have struck that out, and this penalty clause was put in, under which the owner or occupier of a warehouse may be fined if his carts block the way. I doubt whether it was wise to omit the provision about cart space and provide this penalty clause instead. On a full consideration of the objections taken by the National Chamber of Commerce, I think this Council would do well to accept the amendment of the Hon'ble Babu Gonesh Chunder Chunder and omit this provision, leaving all necessary action to clear away and maintain the thoroughfares to the police under the existing law."

The Hon'ble Mr. Woodroffe explained, in reference to what had fallen from the Hon'ble Mr. Cotton, that in section 6 a sub-section *(c)* was inserted, which required to be set forth in the application license "the space, if any, which has been reserved for the loading and unloading of carts," in order to show what space was left in the premises for carts to be brought in.

The Hon'ble Mr. Allen said:—"I think that as this section has been inserted in the Bill, it will be much wiser to let it stand. The learned Advocate-General's principle seems to be that any one who has a large business is at liberty to monopolise the streets. But there are individuals who have no business, and they are just as well entitled to pass through the streets. It is not the fact that a continuous string of carts is allowed in a street, for there is a bye-law in Calcutta, which requires an open space to be left after a certain number of carts. The only persons who disregard this bye-law are the Government carts, and they apparently pay no respect to it. I understand, however, this section has rather reference to carts leaving the line and blocking the traffic while unloading. It will be for the Magistrate to construe its true meaning, and it may be as well to let it remain in the Bill."

The Hon'ble Mr. Playfair said:—"This is a section in regard to which there was considerable discussion in the Select Committee. The traffic which is referred to is principally jute, and I think it will operate with hardship to the native jute merchants whose warehouses abut on the streets, and therefore I would support the amendment."

The Hon'ble the President said:—"So far as the main principles of the Bill are concerned, that is, as regards the incidence and distribution of the taxation which is to supply the funds for keeping up the fire-brigade, I have declared my intention of not intervening in the debate or attempting to influence the decisions of the Council, and I adhere to that view. This, however, is a different question relating to the administration of the Police regulations of the town; and although I desire fully to recognise what the Hon'ble Mr. Allen has said that, as a rule, the views of the Select Committee ought to be supported, yet as the matter had not been fully considered in the light put forward by the National Chamber of Commerce, the members of which would be chiefly affected by this provision, it comes under the category of a case upon which new light has been thrown since the redrafting of the Bill by the Select Committee; and as it is now pointed out that police power already exists to maintain the proper regulation of the traffic in streets, it seems to me unnecessary that any special clause should be included in this Bill, with the view of giving special powers for the regulation of any particular class of traffic. Therefore, I should advise the Council to support the amendment of the Hon'ble Babu Gonesh Chunder Chunder."

The Motion was put and agreed to.

The Council adjourned to Saturday, the 4th March, 1893.

Calcutta; } C. H. REILY,

The 11*th March,* 1893. } *Assistant Secretary to the Govt. of Bengal,*

Legislative Department.

Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal, assembled for the purpose of making Laws and Regulations under the provisions of the Act of Parliament, 24 and 25 Vic., Cap. 67.

THE Council met at the Council Chamber on Saturday, the 4th March, 1893.

Present:

The HON'BLE SIR CHARLES ALFRED ELLIOTT, K.C.S.I., Lieutenant-Governor of Bengal, *presiding.*

THE HON'BLE J. T. WOODROFFE, *Offg. Advocate-General.*

The HON'BLE T. T. ALLEN.

The HON'BLE H. J. S. COTTON, C.S.I.

The HON'BLE H. H. RISLEY, C.I.E.

The HON'BLE J. LAMBERT, C.I.E.

The HON'BLE H. LEE.

THE HON'BLE DR. MAHENDRA LAL SIRCAR, C.I.E.

The HON'BLE A. H. WALLIS.

The HON'BLE GONESH CHUNDER CHUNDER.

The HON'BLE P. PLAYFAIR.

The HON'BLE MAULVI SYED FAZL IMAM, KHAN BAHADUR.

The HON'BLE MAHARAJAH RAVANESHWAR PROSAD SING, BAHADUR.

LICENSED WAREHOUSE AND FIRE-BRIGADE BILL.

The Hon'ble MR. COTTON moved that the clauses of the Bill for the regulation of Warehouses and the maintenance of a Fire-brigade be further considered for settlement in the form recommended by the Select Committee.

The Motion was put and agreed to.

The Hon'ble BABU GONESH CHUNDER CHUNDER said:—"As section 3 of the Bill was passed at the last meeting of the Council, I ask for special leave to move the following amendment:—

'That in clause (5) of section 3, the words *or mustard* be inserted after the word *linseed.*'

The Hon'ble the President said:—"As this is an amendment to remedy an oversight in a section already passed, sanction is given."

The Hon'ble BABU GONESH CHUNDER CHUNDER continued:—"At the last meeting it was unanimously agreed that linseed-oil should be taken out of the operation of this Act. I move that mustard-oil be also taken out of it on the ground that mustard-oil is less inflammable than linseed-oil. The Hon'ble Dr. Mahendra Lal Sircar will, I am confident, support the ground I have ventured to urge, and I do not think there are many places in this City in which mustard-oil is stored in large quantities. There is not much of an export trade in it, and the quantity of oil imported and made here is substantially less than the quantity of other oils brought here for the purposes of the export trade. Furthermore, mustard oil is very largely used, especially by the poorer classes in these Provinces, in the preparation of their food, and an additional tax upon it will enhance its value and will ultimately have to be borne by its consumers."

The Hon'ble DR. MAHENDRA LAL SIRCAR said:—"I have no hesitation in stating that mustard-oil is no more inflammable than linseed-oil, and I go further and say that neither is castor-oil nor cocoanut-oil more inflammable than linseed-oil. They are, if at all, less inflammable than linseed-oil. It will require a very little amount of consideration to say that their character is not inflammable.

For these reasons I do not see why the word 'oil' should be retained in the Bill, and I ask the permission of the President to move that clause (*5*) of section 3 be omitted, and that in clause (*9*) of the same section, the word 'oil' be also omitted."

The Hon'ble MR. COTTON said:—"I concur in the proposal to add the word 'mustard-oil' to linseed-oil, as being an article exempted from the operation of this Bill. But when cocoanut-oil and castor-oil are mentioned as being non-inflammable materials, I can only express my surprise. I was always under the impression that cocoanut-oil was largely used in the whole of this country in lighting *cherags* and *buttees*, which form the universal means of illumination in houses over the greater part of this country. It was certainly universal until petroleum was, in a great measure, substituted for cocoanut-oil. I should say that cocoanut-oil is, strictly speaking, inflammable and should be included among the substances to be kept in warehouses under the Bill, but I do not desire to oppose the Hon'ble Babu Gonesh Chunder Chunder's motion that 'mustard-oil' should be excluded."

The Hon'ble MR. LAMBERT said:—"I know of no large godown in the city which is used exclusively for the storage of mustard-oil, nor in my recollection has there been any fire in which the storing of mustard-oil in small quantities has caused any serious difficulty. No doubt, whenever fire breaks out in premises where oil of any kind is stored, the fire burns more fiercely and is much more difficult to extinguish. But as regards mustard-oil, I see no special reason why it should not be excluded from the operation of the Bill."

The Hon'ble Maulvi SYED FAZL IMAM, KHAN BAHADUR, said:—"In my capacity of Vice-Chairman of the Patna Municipality, I have had long personal experience of places in which the oils which have been referred to are manufactured and stored in large quantities. There is no doubt, as has been observed by the Hon'ble Mr. Lee, that oils when once ignited prove a source of great danger, and that the flames do not admit of prompt extinguishing. Yet oils cannot possibly be compared to jute, cotton, straw, wood, &c., in the matter of inflammability; and when the Council has agreed to exempt linseed-oil from the operation of the Bill, I think there can be no objection to place mustard-oil on the same footing. For these reasons I will support the amendment of the Hon'ble Babu Gonesh Chunder Chunder."

The Hon'ble THE PRESIDENT said:—"The Hon'ble Dr. Mahendra Lal Sircar has asked permission to move as an amendment that the whole of clause (*5*) of section 3, the definition of 'oil,' be omitted, and that the word 'oil' be omitted from clause (*9*). As we have already admitted a cognate amendment which was not strictly in order, I see no objection to this further amendment being put."

The Hon'ble DR. MAHENDRA LAL SIRCAR said:—"My reason for proposing this amendment is, that in simple fairness we cannot retain castor-oil and cocoanut-oil among the articles which are to be subject to the operation of this Bill, if we exclude mustard-oil and linseed-oil. They are on the same footing as far as the risk of fire is concerned, and if we exclude the latter, why should not we exclude the former also?"

The Hon'ble MR. LEE said:—"I believe, Sir, that the Commissioner of Police will be able to support me in saying that it makes very little difference what the oil stored be once the building catches fire. I think that if linseed-oil and mustard-oil are left out of the Bill, all oils should be left out—not only on the general principle which has been suggested, but also because it would be very inconvenient in working to have exceptions. It would be most inconvenient to have the different classes of oil divided, some as taxable and some as not taxable under this Act. An oil vendor has all kinds of oil. We are to exclude small quantities of assessable articles, and it would therefore be

necessary for the officer appointed by the Commissioner of Police to inspect these warehouses, and see what is taxable and what is not taxable; that he should make out a list showing so many canisters of linseed-oil, so much of mustard-oil, and so much of cocoanut-oil, and unless he counts up the number of canisters of each kind of oil he would be unable to say whether it was taxable or not. The quantities of each kind of oil would vary from day to day, and it would be very difficult to say in each case whether it was a warehouse under the Act or it was not. I think it should be laid down in a manner clear and understandable. I therefore agree with the Hon'ble Dr. Mahendra Lal Sircar that oil should be altogether omitted from clauses 5 and 9 of section 3."

The Hon'ble MR. LAMBERT said:—"It is very difficult to make out a stronger case against castor-oil and cocoanut-oil than as regards mustard-oil and linseed-oil; and, as far as I am aware, there are no large warehouses in this City used exclusively for the storage of any of these oils. Therefore, I agree to the proposed amendment."

The Motions were put and agreed to.

The Hon'ble MR. LEE said:—"Before the business next on the list is proceeded with I wish, with the permission of the President, to ask whether the amendment left undecided in the first part of section 10, which was moved by the Hon'ble Babu Gonesh Chunder Chunder at the last meeting of the Council, has been withdrawn."

The Hon'ble THE PRESIDENT said:—"The Council has not yet reached the amendment to which the hon'ble member has referred. The Hon'ble Mr. Woodroffe has asked leave to introduce an amendment to section 9, by the addition of the words 'the proceedings of such Committee shall not be submitted to the Commissioners in meeting, or be subject to revision by them.' This is an amendment of which notice has not been given. But considering that it appears that, by an oversight, the section as it stands may have an effect which the Select Committee had not foreseen, and possibly the Council may not have foreseen, I will allow the amendment proposed by the Hon'ble Mr. Woodroffe to be brought on now."

The Hon'ble MR. WOODROFFE said:—"When section 9 was before them, the majority of the Council was in favour of vesting in a Special Committee, to be appointed by the Commissioners in meeting with the consent of the Chairman the powers and discretion vested in the Chairman in regard to granting or withholding licenses for warehouses under this Act; that is to say, the Council considered it desirable that this matter should be placed in the hands of a small body of persons and should not be brought up for debate before a large unwieldy tribunal, such as the whole body of the Commissioners. Since that discussion, my attention has been called to the wording of section 66 of Act II of 1888, the Calcutta Municipal Consolidation Act, and it has been suggested that the proceedings of this Special Committee might thereunder be subject to revision by the Commissioners in meeting. For my own part, I do not think so, nor do I consider that the Committee appointed under this Act would be bound by any Resolution passed by the Commissioners in the matter. But however the decisions of the Special Committee appointed under section 9 of this Act, with the consent of the Chairman, be thought to be subject to revision, and to be brought up for discussion and debate, prolonged it may be for a very considerable period of time, it is desirable so to amend this section that there shall be no room for a contention which, if successful, would, in some cases at least, render the investigations which might be made and the decision which might be arrived at by the Special Committee, simply labour lost. I therefore move that section 9 be amended by the addition of the words 'the proceedings of such Committee shall not be submitted to the Commissioners in meeting, or be subject to revision by them.'"

The Hon'ble Mr. Cotton said :—"I think this is emphatically a proposal of which notice should have been given. It appears to me to be a matter of very great importance that a proposal should be sprung upon us at the eleventh hour, setting aside a principle which has been definitely established by an Act of the Legislature. By section 56 of Act II of 1888, it is laid down that the action of Committees is subject to confirmation by a general meeting of the Commissioners. This is emphatically one of those principles which establishes the principle of Local Self-Government, dealing with local affairs in this Metropolis. The proposal of the learned Advocate-General entirely sets aside this important principle, and if it is to be adequately discussed at a meeting of this Council, I think we should have received notice of it beforehand. The Bill, as it is before the Council, places the grant of licenses in the hands of the Chairman of the Commissioners. It removes this power from the Commissioners in whose hands the power was formerly vested; but it authorises the Commissioners with the consent of the Chairman to appoint a small Committee to consider applications for licenses. The law, as it now stands in the Bill before you, whittles away the power of the Commissioners to the very smallest possible extent—to a far larger extent than I think is wise or proper. The learned Advocate-General informs you that by a large majority this revision in the law was carried. I think myself that it was a comparatively small majority. But be that as it may, there is no doubt that the Bill, as drafted, deprives the Municipal Commissioners of Calcutta of a very valuable privilege. The proposal led to a very unmerited and unjust attack upon the Commissioners by a member of this Council. [The President said :—"I must ask the hon'ble member to withdraw the word 'unjust.' It appears to me to be a term which should not be applied by one member of this Council to another."] In deference to the President, I withdraw the word "unjust," although it expresses no more than my own personal feelings on the subject. The Hon'ble Mr. Allen is a Master of flouts and gibes, and loses no opportunity of girding at one time at the High Court; at another time at the Calcutta Commissioners, and at another time at this Hon'ble Council itself. [The President said:—"I must ask the hon'ble member to confine himself to what is before the Council. I think it very undesirable and a very unfortunate thing if occasion is taken in proceedings like these to bring forward occurrences which took place two years ago, and which we all wish to forget. We are not here for personal debate; we are deciding the question whether an amendment should be agreed to or not, and I must again ask the hon'ble member to confine himself to the question before us."] The Hon'ble Mr. Allen indulged in a long diatribe upon the conduct of the Municipal Commissioners of Calcutta. [The President said:—"I must again point out to the hon'ble member that we are not discussing what the Hon'ble Mr. Allen said, but we are discussing a particular question, whether a particular amendment should be made in a particular section of the Bill before the House."] If this provision is added to the Bill, it will materially impair the powers of the Commissioners. I think that time should be allowed to the Council to consider the effect of the proposal."

The Hon'ble the President said :—"The President has, under the Rules, the power of admitting amendments of which notice has not been given, and I have admitted this amendment under the impression that it corrects a mistake which had occurred, and will set things practically in the position in which they were supposed to be placed when the Select Committee passed the draft of the Bill which we are now considering. If it is a fact that the Select Committee had, before them, when this section was considered and agreed to by them, the possibility that the decision of the Special Committee under section 9 might be subject to the general consideration of the Commissioners in meeting and to revision by them, and if it was their intention that it should be so subject, then it is obvious that what has fallen from my hon'ble friend, Mr. Cotton, is a matter of very considerable importance, and therefore time should be allowed for the consideration of an amendment which would alter the intention of the Select Committee. But if the Select Committee did not anticipate or intend such a result, then the amendment merely carries out their objects and involves no change in principle. I think, therefore, under such

circumstances, that it will be better to put the question to the House. The Council knows how far they understood that the Special Committee were to be authorised under section 9 to give a final decision, and how far they were under the impression that the decision of the Special Committee would be subject to revision under section 66 of the Municipal Act by the Commissioners at large. Those who understood the ninth section to imply a final decision on the part of the Special Committee would perhaps consider that we might proceed at once to the consideration of the amendment, which only clears away any doubt as to that intention. Those who consider that a new principle has been introduced will probably desire that it should be deferred for the next meeting of the Council. I therefore ask the Council whether they will consider this amendment to-day or postpone it to the next meeting of the Council."

The Hon'ble Mr. Lee said:—"I had two reasons for voting that the consideration of this matter had better stand over till next Saturday. One was that there seems to be some heat in the atmosphere, and the other that I had a proposal which I hoped would have met the wishes of all, and that therefore this particular amendment might have been withdrawn in favour of another. The Bill if passed now would have an effect that was not wanted by those who advocated the passing of section 9 in its present form. It is more or less by an accident, I consider, that it was passed. It was rather, I think, in opposition to the amendment which was moved by the Hon'ble Babu Gonesh Chunder Chunder, and in disapproval of my remarks thereon, than by way of expression of their own views, that the votes were recorded by a small majority last Saturday. I am sure it was not the wish of that majority that licenses for hay, wood, straw, and coal should form the subjects of debate before a Standing Committee, that in all these cases opinions should be recorded in shorthand and the proceedings reported to the Commissioners as they would have to be and published. There are no less than 343 woodyards in Calcutta, and every one of these has to take out a license. The power of licensing wood godowns is vested in the Commissioners; and as I tried to explain last Saturday, but failed to convey to hon'ble members, the result is that the licensing of these warehouses for wood, hay, straw, coal, rags, bamboos, tallow, and wax is dealt with as routine work by the Chairman. There is a section of the Act, which I thought would have been present in the minds of hon'ble members, that vests in the Chairman the powers of the Commissioners subject to control in meeting; therefore the business is done with expedition when routine matters are left to the "Commissioners." But if such routine matters are to be made over to the Standing Committee, I say surely that you will waste a great deal of time. The fact was remarked upon by Your Honour in the Resolution on last year's Administration Report of the Calcutta Municipality that there are no less than 280 meetings of the Commissioners either in Committee or in general or special meeting last year—more meetings than there are working days or as many. It is now proposed to add another Committee, which would have to deal with the licenses of 343 wood warehouses, 86 straw warehouses, 20 bamboo warehouses, 26 coal warehouses and 10 tallow and wax warehouses, and 111 jute warehouses. Therefore, I regret, Sir, that this motion, which has been somewhat suddenly brought forward, could not have been postponed until next Saturday. I venture to hope that, if this motion be lost now, it will not be a bar to a proposal being brought forward next Saturday which will restore the work to a reasonable groove. For these reasons I must record my opinion against the amendment."

The Hon'ble Mr. Allen said:—"It appears to me that there is some misapprehension about the learned Advocate-General's amendment, and that it is absolutely unnecessary. It is perfectly true that the Commissioners, acting under the powers conferred upon them by Act II of 1888, have the right of controlling in meeting all special Committees, and also their Chairman, when they deal with matters provided for in that Act; but surely this Bill is quite outside anything covered by Act II of 1888. It provides for a special service for a special purpose, and it throws the responsibility of granting certain licenses on the Chairman of the Commissioners of Calcutta. I cannot conceive that under those general powers of Act II of 1888, the Commissioners would have any power to interfere with their Chairman when he acts under the authority of this Bill on a business totally outside anything

dealt with in Act II of 1888. Then we have a section, No. 9, allowing the Commissioners, with the consent of the Chairman, to appoint a Special Committee to exercise the powers which by this Bill are given to the Chairman. Suppose that an Act for the prevention of contagious diseases throws on the Chairman the functions of visitor to a lock hospital, could it be pretended that the Commissioners in meeting were entitled to control their Chairman in the discharge of his duty as visitor? Just as little right have they to control him in the discharge of his functions under this Act. Such being the case, the proceedings of the Special Committee appointed with the consent of the Chairman, and called into existence to discharge the functions thrown upon him, are just as much beyond the control of the Commissioners as the Chairman himself would be in the exercise of those powers. The Special Committee merely takes the place of the Chairman. Therefore, it appears to me, and I understand that the learned Advocate-General is disposed to hold the same opinion, that the amendment which he has now brought forward in no way alters the law, and that it is merely brought forward for the sake of obviating a baseless claim which might otherwise be made."

The Hon'ble MR. WOODROFFE in reply said:—"Sir, the Hon'ble Mr. Allen has correctly appreciated the motives which led me to propose this amendment, and I regret to find myself in this matter not in accord with the Hon'ble Member in charge of the Bill. I think he has not correctly appreciated the position. As far as I understand the Bill now before the Council, there are special duties imposed on the Chairman of the Commissioners under sections 5, 6, 7, and 8. These are, as it appears to me, outside the powers which the Chairman of the Commissioners exercises under the Calcutta Municipal Consolidation Act. But coming to know that there is a contention, which has now been emphasized in this Council, that these powers are to be taken to be subject to the general provisions of the Municipal Act, it occurred to me that it is desirable to place before the Council such an amendment as should prevent such a question being raised. In my opinion there will not be taken away by my amendment any of the powers which the Municipal Commissioners now possess. It does not appear to me that they could contend, regard being had to the language of the Municipal Act, that by exercising the powers vested in him by this Bill for the granting or refusal of licenses, the Chairman would be exercising the powers of the Commissioners as defined in the Municipal Act; or that the Special Committee appointed under section 9, with the consent of the Chairman, to exercise the powers and the discretion of the Chairman under this Act, would be a Committee within the meaning of the Municipal Act. But I think it is desirable, when one finds that such questions may arise and may cause debate, to set the matter at rest by positive enactment. The proposed amendment in this view makes no reference to Act II of 1888 or to the Mufassal Municipal Act. I move it simply to give effect to what I for one understand to be the view taken by this Council that, when a Special Committee exercises the powers of the Chairman under this Act, their action is not a matter which can or ought to be brought before the Commissioners in meeting. Had I thought that the matter stood as the Hon'ble Member in charge of the Bill has suggested, namely, the removal of powers possessed by the Commissioners in meeting, I should myself have postponed this amendment until the matter had been placed before hon'ble members of Council. It is because I understood, and still understand, that there is not that question involved in this amendment, that I now bring forward this amendment."

The Motion being put, the Council divided:—

Ayes 6.	*Noes* 6.
The Hon'ble Mr. Playfair.	The Hon'ble Maharajah Raveneshwar Prosad Sing Bahadur.
The Hon'ble Mr. Wallis.	The Hon'ble Maulvi Syed Fazl Imam, Khan Bahadur.
The Hon'ble Mr. Lambert.	The Hon'ble Babu Gonesh Chunder Chunder.
The Hon'ble Mr Risley.	The Hon'ble Dr. Mahendra Lal Sircar.
The Hon'ble Mr. Allen.	The Hon'ble Mr. Lee.
The Hon'ble Mr. Woodroffe.	The Hon'ble Mr. Cotton.

The Hon'ble THE PRESIDENT said:—"The votes of the Council, excluding myself, are equal. It is therefore incumbent on me to vote. The reason why I give my vote with the ayes is that it seems quite clear from what has fallen from the Hon'ble the Legal Remembrancer and the Hon'ble the Advocate-General that the effect of the amendment is merely to set at rest a possible interpretation of the law which is not the right interpretation; and we thereby save the public and the municipality from unnecessary legal proceedings and contentions."

The Hon'ble President having recorded his vote with the *Ayes*, the Motion was carried.

The HON'BLE MR. LEE said:—The question I wish to ask is, has the notice of amendment moved by the Hon'ble Babu Gonesh Chunder Chunder with reference to section 10, concerning which the Hon'ble Advocate-General and the Hon'ble the Legal Remembrancer have notices of motion on the paper, been withdrawn? I ask this, because I do not find it in the list of business, and without that amendment being before us, the Council is in a position in which it cannot, if so minded, express an opinion that the intentions of the Select Committee should be carried out. If both the Hon'ble Mr. Woodroffe and the Hon'ble Mr. Allen's amendments are lost, what would be the result? Can we then vote on the proposal of the Hon'ble Babu Gonesh Chunder Chunder, which is not in the list of business, and which was not voted upon at the last meeting, and of the withdrawal of which we have not received notice?

The Hon'ble THE PRESIDENT said:—"I understand from the Secretary that the Hon'ble Babu Gonesh Chunder Chunder's motion, which was postponed at the last meeting for consideration of an amendment which the Hon'ble Mr. Allen adumbrated, and which he had not formulated, has not been withdrawn. Therefore, if the amendments of the Hon'ble Mr. Allen and the Hon'ble the Advocate-General are lost, I shall be prepared to put the amendment of the Hon'ble Babu Gonesh Chunder Chunder."

The Hon'ble MR. WOODROFFE, by leave of the Council, withdrew the motion of which he had given notice that for the first paragraph of section 10, the following be substituted:—

'The annual fee payable in respect of any license shall not exceed ten per centum per annum on the value of the warehouse as it is assessed to the payment of the municipal taxes, less five per centum on the original outlay incurred in respect of the means and appliances therein or appertaining thereto for preventing or extinguishing fire, and less the annual expenditure incurred in or about the repairing, adding to, maintaining and working the same. Such annual expenditure to be taken to be the expenditure incurred in or about such repairing, adding to, maintaining and working during the preceding years.'

He said:—"I was induced by some observations which fell from hon'ble members opposite on the last occasion to bring forward this amendment, but I have since discovered from figures laid before me that there would be no relief whatever given to those proprietors of warehouses who have expended money on fire-extinguishing appliances, if only 5 per cent. were allowed on such expenditure."

The Hon'ble MR. ALLEN said:—"From what has fallen from the Hon'ble the Advocate-General, and from what I learn from the gentleman who represents the commercial interests of Calcutta, I understand that the practical effect of this amendment will be almost nothing, and it is therefore only on the ground of theoretical propriety that I bring forward the proposal which stands in my name. The hon'ble member opposite, on the last occasion, proposed to make 5 per cent. the allowance to be deducted from the outlay on appliances for extinguishing fires with which jute presses and warehouses are furnished. But as some expense may be incurred of a recurring nature in keeping the original block in repair, and also in providing the means of working those appliances, I then draw a distinction between fixed outlay and recurring

expenses, and in accordance with your suggestion, Sir, this amendment has been formulated, and I now leave it to the Council. The following is the amendment I propose:—

'The annual fee payable in respect of any license shall not exceed ten per centum per annum on the annual value of the warehouse as it is assessed to the payment of the municipal taxes, less the annual outlay (including five per centum on the first cost of all fire-engines, pumps and other appliances) incurred in respect of the means for preventing and extinguishing fires.'

The Hon'ble MR. PLAYFAIR said:—"I think some misconception exists regarding the cost of private fire extinguishing appliances in relation to the municipal assessment of properties; and that, if the providing of such appliances is to be encouraged, section 10 must stand as it had been drafted by the Select Committee.

"I find that 14 of the more important press-houses, representing a capital valuation of about 62½ lakhs of rupees, and with a municipal assessment of Rs. 3,12,050, are equipped with fire-extinguishing appliances costing Rs. 99,006. If this latter sum of Rs. 99,006 is to be deducted from the municipal assessment, it is probable that three of the smaller press-houses might be reduced in taxation to the extent of Rs. 480 per annum. The remainder and larger press-houses would receive no benefit. But if the value of the fire-extinguishing appliances is to be deducted from the capital valuation of 62½ lakhs of rupees, as we suggested at the last meeting of the Council, not one of the 14 press-houses will obtain any relief in taxation on account of having fire-extinguishing appliances of its own, and each may be taxed Rs. 750, making a total of Rs. 10,020. Likewise, as 5 per cent. of the value of these appliances would represent a very small sum, the deduction of this amount from the municipal assessment before ascertaining the tax to be levied for the fire-brigade, would be of no advantage. The amendments before the Council would therefore do away with the benefit intended to be obtainable by those who protect themselves and their neighbours in having appliances of their own for the purpose of controlling fires. On the other hand, if the cost of the fire-extinguishing appliances were to be deducted from the municipal assessment, some of the smaller press companies might reap some benefit; for, in instances, such cost represents a larger percentage on the municipal assessment of these smaller works than is the cost of appliances at the larger works in relation to the municipal assessment of the larger works.

It is probable that some of the smaller press-house companies having appliances of their own may be relieved of taxation to the extent of 1 to 1½ per cent. of the municipal assessment by the provisions of section 10 as it stands. These are the persons to whom I referred on a previous occasion as likely to be taxed to the extent of 6 per cent. of the municipal assessment; while their more influential neighbours in the trade may be called upon to pay only one and a half per cent. under the proposed system of differential taxation. The claims of the smaller trader may, in this respect, merit the consideration of the Council. I understand it to be the intention of the Legislature that all traders in hazardous goods should be encouraged to minimise the risk of fire within their premises, by adopting methods for the prevention and the control of fires, and that section 10 was drafted by the Select Committee with this object. The amendments now before the Council would stultify this intention. The hon'ble member, who proposed a similar amendment at the last sitting of the Council, feared lest an owner of a hazardous article might become exempt from taxation in having fire-extinguishing appliances of greater capital value than the municipal assessment of his premises, and I ask why should he not be exempt? Why should the owner of a large work having a small godown holding, for instance, tar, or tallow, or resin, or any other article specified in clause *(9)* of section 3, be troubled and further burdened with the fire-brigade tax, when he keeps on his premises fire-brigade appliances capable of protecting the whole of his works, and fit to douse this single godown at a moment's notice?

"It is evident to my mind, Sir, that if the provision of private fire-extinguishing appliances is to merit reduction in taxation, section 10 must stand as it has been presented by the Select Committee."

The Hon'ble BABU GONESH CHUNDER CHUNDER said:—"I cannot support the amendment which has been proposed by the Hon'ble Mr. Allen, for if it is carried, it will add a great deal to the complications which already exist in the working of the Bill. In addressing the Council on the last occasion, I stated that it would be reasonable to allow such warehouses deductions from the annual assessment of their premises of 5 per cent. on the cost of the outlay for appliances for extinguishing fires. It is now sought to add to that 5 per cent. the outlay incurred in respect of the means of preventing and extinguishing fires. If this amendment is allowed to be introduced in the Bill, the result will certainly be this: somebody would have to decide what is reasonable and what is not reasonable outlay for the particular warehouse. There is nothing in the Bill to indicate who would decide that. Suppose a particular house chooses to expend Rs. 100 a month, or Rs. 1,200 a year, for the expenses of keeping up the appliances, who will decide whether such expenses are reasonable or not reasonable for the purpose? Then, again, there would be nothing in the Act to give the Commissioners power to enquire into the subject of the outlay by each warehouse. The result would be that the Commissioners would be placed in a position which would compel them to accept whatever statement of outlay may be furnished to them by the owners of warehouses, and to deduct whatever amount they may choose to pay from the annual assessment. I venture to think, Sir, that it will be complicating the Act to a very great extent if a general provision like this be introduced, namely, that in addition to 5 per cent. on the cost of all fittings, &c., the owners of warehouses shall be allowed to deduct the annual outlay which they will incur in keeping up the appliances. I cannot therefore support the amendment of the Hon'ble Mr. Allen; and when the proper time comes I will bring in my original motion, the further consideration of which was postponed at the last meeting."

The Hon'ble Mr. LEE said:—I should have much pleasure in supporting the amendment of the hon'ble Mr. Allen's motion were it not that a better one is coming forward in that of the hon'ble Babu Gonesh Chunder Chunder. I understand that the only difference between the two is that the hon'ble Mr. Allen's amendment will allow a deduction for what are called recurring expenses of an uncertain nature and amount. The result of passing this amendment would be the reverse of what was intended when the idea was adumbrated. It will have the effect of throwing more taxation on jute warehouses than they have now. That is my opinion as to how it would actually work out. That, as the Council is aware, I do not think would be in itself inequitable, but it would be at the cost of a greater inequity. Difficulties would occur in respect of straw depôts, hay depôts, and wood depôts, when the calculation came to be made regarding the license fee payable, as to what deduction should be allowed for recurring expenses for the prevention of fires. In jute warehouses it would doubtless be decided that a portion of their establishment engaged in the general work of the warehouse should be charged to the maintenance and supervision of the fire-appliances A certain percentage of the establishment would be so charged. The same principle would have to be applied when we come to timber yards and straw depôts. It is the practice in almost all straw depôts and timber yards to keep a certain number of ghurrahs of water. Somebody has to keep them filled with water, and it will be urged before the Standing Committee with considerable force that a share of the establishment of each timber yard and straw depôt should be debited to recurring expenses for the prevention of fire. Now under the Bill a sum of Rs. 5,679 will be collected from 343 depôts, and that comes to about Rs. 17 a year from each on the average. One chaukidar or other servant will get from Rs. 6 to Rs. 10 a month, the least amount, and it will be a very small proportion of his pay that will have to be debited to the prevention of fire to wipe out the whole of these fees now recovered or recoverable under the Bill from wood depôts. The same would be the result as to straw depôts, and the same result as regards other warehouses; and what could not be recovered from them would have to be recovered from jute warehouses up to 50 per cent. of the cost of the fire-brigade. The hon'ble the Advocate-General shakes his head, and I am at a loss to see why. The Bill says distinctly that the

Municipal Commissioners can recover from warehouses of all kinds 50 per cent. of the cost of the fire-brigade. If, then, hay, wood, straw and other warehouses contribute nothing, it seems to follow as a matter of course that the 50 per cent. will all be subscribed by jute warehouses. I think that would not in itself be inequitable, but I see no reason why other warehouses, which were before paying Rs. 13,000 a year, should only pay Rs. 8,000 under this Bill, while it would be more inequitable still that they should be exempted altogether. So that for practical reasons I would much prefer the amendment which is about to be moved by the hon'ble Babu Gonesh Chunder Chunder, and for that reason I shall vote against the amendment of the hon'ble Mr. Allen.

The Hon'ble Mr. Woodroffe said :—"As already indicated from what I said when I asked for leave to withdraw the amendment which stood in my name, I find myself unable to support the Hon'ble Mr. Allen's amendment; and I wish to explain a little more in detail why I do so. I believe it will be found that when this section came before the Council on the last occasion, the proceedings which then took place, and which led to the Hon'ble Mr. Allen's formulating this amendment, showed that there was some considerable misunderstanding as to what the meaning of the section is. I gathered that some of the hon'ble members opposite supposed that from the amount of the annual license-fee it was intended to take the whole of the value incurred in respect of the appliances for preventing and extinguishing fires; whereas the section does not do so. Section 10, as I read it, provides that, from the annual value, as it is assessed to municipal rates, there shall be taken the outlay incurred on such appliances, and that upon the difference there shall be assessed a rate not exceeding 10 per cent.

"I have in my hand the details of the largest press-houses which were referred to by the Hon'ble Mr. Playfair, and from a perusal of these it will be seen that if, as suggested by the Hon'ble Mr. Allen in this amendment, there be only taken from the amount of the license-fee 5 per cent. on the first cost of all the fire-engines, &c., incurred in respect of preventing or extinguishing fires, not one large press-house or warehouse in this City will derive any advantage from the cost incurred in providing such appliances for protecting his premises from fire, and in so doing, protecting his neighbours; whereas if the Bill stands as it does at present, and as it left the hands of the Select Committee, there will be an advantage given to the smaller warehouses. I will illustrate my meaning by the figures to which I referred. Messrs. Ralli Brothers are one of the largest press-owners in this City, and the municipal assessment on their premises is Rs. 45,000. That is the annual value, and on that the rate is struck; and but for the fact that this Council has fixed the limit of Rs. 750 than which there shall not be a larger license-fee paid, they would have to pay a fee of Rs. 4,500 a year. Those Merchants have, however, laid out on fire-extinguishing appliances no less a sum than Rs. 36,640. Deducting that sum of Rs. 36,640 from Rs. 45,000, there remains Rs. 8,360; and if the Rs. 750 limit had not been passed, they would have had to pay a fee of Rs. 830. The consequence is that this firm does not gain one single anna by the great service which they have rendered to the community at large in protecting themselves from the risk of fire. Practically, they have expended a sum equal to the annual value of the premises, and yet they gain no advantage. The next on the list is the Union Press Company, whose municipal assessment is Rs. 34,100. They have laid out Rs. 9,000 in fire-extinguishing appliances, the balance is Rs. 25,100, and they also are only to be protected by the Rs. 750 limit. The Strand Bank Press Company has laid out in fire-extinguishing appliances Rs. 7,500 upon an annual assessment of Rs. 33,500, leaving a balance of Rs. 26,000; they therefore also gain nothing. The Golabarry Press, which is in the hands of Messrs. Finlay, Muir and Company, have expended Rs. 3,500 as against a valuation of Rs. 24,000; they, therefore, also would gain nothing. It is not until you come to the smaller presses that any advantage is gained by leaving the Bill as it is; and consequently no advantage will be secured if the Hon'ble Mr. Allen's amendment were carried.

"Take, for instance, Watson's Press, the assessment upon which is Rs. 12,800, and the fire-extinguishing appliances cost Rs. 7,000. That reduces the assessable value to Rs. 5,800, and they would therefore gain an advantag of Rs. 170 per annum. The Canal Press has a municipal assessment of Rs. 12,400, with an outlay of Rs. 7,500, thus reducing the assessable value to Rs. 4,900, and they would therefore only pay Rs. 490 for the fire-brigade, and gain Rs. 260. Nasmith's Press, with an assessment of Rs. 12,000, has laid out Rs. 5,000, thereby reducing the assessable value to Rs. 7,000; they, therefore, obtain relief to the extent of Rs. 50. Similarly, as I understand, when you go down lower in the grade, the advantage of the Bill as it left the Select Committee will be felt by those to whom I understand hon'ble members generally are in favour of granting relief, namely the smaller men.

"There is not a man out of the fourteen largest press owners who gains the sum of one rupee even by the deduction from the total assessable value of the total amount laid out on appliances. It is only when you come down to the smaller men that any advantage is obtained. If you demolish the provision of section 10 as it stands in the Bill, and deduct instead 5 per cent. on the annual outlay and recurring expenses, there will be no relief gained at all; and it will come to this that, in the opinion of this Council, there is a premium held out to those who lay out nothing in self-protection, and by self-protection protect also their neighbours; whereas every encouragement should be given to persons in this City who, by protection of their own property from fire, afford protection to their neighbours. I would therefore ask the Hon'ble Member in charge of the Bill to consider the figures which have been submitted to me.

"It is for these reasons that I find myself unable to support the Hon'ble Mr. Allen's amendment. It is conceived with the best intentions, and I doubt not that to a certain extent it is due to the imperfect information laid before the Council, which gave it the idea that under the Bill, as it stands, the larger presses would get off scott-free. Whereas, I find that such will by no means be the case, and if 5 per cent. upon the outlay only be allowed, even the smaller presses will gain nothing from any expenditure which they may have made upon fire-extinguishing appliances.

"With reference to what has fallen from the Hon'ble Babu Gonesh Chunder Chunder, it does not seem a reasonable construction of the Bill that the Chairman of the Commissioners or the Special Committee are bound to admit the claim made in regard to the cost of appliances."

The Hon'ble MR. COTTON said:—"I have considered the statement which has been placed in my hands by the learned Advocate-General, but I regret to say it does not impress me so strongly as it has done my hon'ble friend. The reason why this proposed amendment in the Bill would practically have no effect, in the case of these large warehouses, is that they have already gained so enormously by the decision to which the Council arrived at the last meeting of limiting the maximum to be paid by any warehouse to Rs. 750. A warehouse which is now paying Rs. 4,500 a year will, under this Bill, not be liable to pay more than Rs. 750. It is difficult to conceive a greater gain than that short of remitting them from the payment of all license fees altogether. Hon'ble Members will remember that an amendment to strike out of the Bill the limit of Rs. 750 was rejected. If it had been carried, there might have been more cogency in the learned Advocate-General's arguments; but as the Bill stands, they have no effect whatever, because the larger warehouses on behalf of which they were urged are already amply protected by limiting the maximum to Rs. 750. But when we are dealing with the somewhat smaller warehouses. it is then that the provision now proposed would act so unfairly. Assuming a small warehouse to be worth the annual value of Rs. 500, that is to say, that its capitalised value is Rs. 10,000 and the annual value Rs. 500, the assessment upon it would be one-tenth, or Rs. 50 a year. The owner of that warehouse would, if the provision now put forward be passed into law, merely have to spend Rs. 50 towards protection from fire to be exempted from all taxation under the Act. As I read the meaning of the provision, that

would be the effect of such an outlay. It is to prevent anomalies of this kind that the Hon'ble Babu Gonesh Chunder Chunder moved his amendment that 5 per cent. upon the outlay incurred in respect of fire-extinguishing appliances should be deducted, and not that the capital outlay incurred should be deducted. It seems to me that that amendment is a very fair and reasonable one, and I hope the Council will accept it."

The Hon'ble MR. ALLEN in reply said:—"I think it unnecessary for me to take up any time with a reply. The whole discussion is entirely academical; it has travelled so utterly into cloud land that one would think it was in the island of Laputa it was being held. Practically, the charge on the larger warehouses is a flea-bite. They are so amply protected by the Rs. 750 limit that even if a much larger percentage were deducted, it would have no effect. In the Hon'ble Advocate-General's speech there was a constant confusion between the value which is subject to assessment and the capitalised value. The annual value of Messrs. Ralli Brothers' Press-house, for instance, is Rs. 45,000; the cost of appliances Rs. 35,000, which should be deducted not from the annual value, but from the capitalised value. So that even if ten, twenty or a much larger percentage is allowed, there will be no result to any of the fifteen large European Press-houses."

The Motion was put and negatived.

The Hon'ble THE PRESIDENT called upon the Hon'ble Babu Gonesh Chunder Chunder to move the amendment, the further consideration of which was postponed at the last meeting of the Council, and at the same time mentioned that the Hon'ble the Advocate-General, with His Honour's permission, proposed to bring forward an alternative amendment by substituting the words '10 per cent.' for the words '5 per cent.' in the Hon'ble Babu Gonesh Chunder Chunder's amendment.

The Hon'ble BABU GONESH CHUNDER CHUNDER moved that, in line 5 of section 10, the words "five per cent. on" be inserted after the word "less."

He said:—"The reasons for this amendment I laid before the Council on the last occasion, and I do not think there is any necessity for repeating them. I shall only make one remark, namely, that from the discussions which have taken place to-day on the amendment of the Hon'ble Mr. Allen, it appears quite clear that by reason of the maximum limit of Rs. 750, the provisions of this section, if it is amended as suggested by me, would have no application to those warehouses which would, but for that limit, have to pay a license fee of more than Rs. 750 on a 10 per cent. rate on the annual value; because in their case, whatever deductions might be made on account of the provision of fire-extinguishing appliances, the result would make no difference to them; as in the case put by the learned Advocate-General, of Messrs. Ralli Brothers, where their press-house is assessed at the annual value of Rs. 45,000, and the entire cost of the outlay for appliances is Rs. 36,640. There, whether you deduct 5 per cent., or 20 per cent., or 30 per cent., it would make no difference, because, under the maximum limit, they would not have to pay more than Rs. 750. According to my amendment, if a limit of Rs. 750 was not fixed, the result in their case would be this: five per cent. on Rs. 36,640 would be in round numbers Rs. 1,830, the amount to be deducted from Rs. 45,000, and on the balance of Rs. 43,170, a tax at 10 per cent. would have to be paid, amounting to Rs. 4,317; but under the maximum rule they would not be taxed more than Rs. 750. Therefore, whether you take a percentage upon the value of the fire-appliances, or allow a deduction of the whole of that value, it would make no difference to them. But in other cases, where the amount of the tax to be paid would be under the limit of Rs. 750, there, whether you deduct a percentage on the cost of fire-extinguishing appliances, or the whole of such cost, it would make every difference.

"For, as in the case put by the Hon'ble Mr. Cotton, suppose the annual value of a warehouse were Rs. 500, its capitalised value being Rs. 10,000, it would not be too much to spend Rs. 500 on the appliances, and if the whole of such sum were deducted from the annual value, there

would be no tax to pay. It would be against all principle to deduct the whole sum from the annual value, because you would have to do it year after year, and so, by spending the sum of Rs. 500 once, the warehouse would be exempted from all payment of tax whatever; not that he would be allowed to deduct it once, but you would have to do it year after year. I do not think it was ever the intention that a person who spent in providing fire-extinguishing appliances a sum equal to the value of the annual assessment should be exempted from the payment of all tax for ever. It would make no difference on the larger warehouses whose license fee exceeds Rs. 750, but it would certainly make a great deal of difference to those whose fees were less than that maximum sum. Therefore, a percentage only can be taken, and I do not think 5 per cent. is a very unreasonable percentage to allow. In the case of the small warehouse put by the Hon'ble Mr. Cotton, a reasonable reduction, which the proprietor can expect, is 5 per cent. on Rs. 500, that is Rs. 25; and the tax would have to be assessed on Rs. 500 minus Rs. 25, which would be Rs. 475."

The Hon'ble MR. WOODROFFE said :—"There is no doubt that, as the matter stands, it has been made clear, from what has fallen in the preceding debate, that large jute presses will gain no advantage whatever from large sums of money spent in providing fire-extinguishing appliances, and for that reason I shall be obliged to record my vote against the amendment before the Council. I do not know whether I shall be in order, in reference to what has fallen from the President, in bringing forward an alternative amendment that, instead of 5 per cent., a deduction be made of 10 per cent. on the cost of fire-extinguishing appliances."

The Hon'ble THE PRESIDENT said :—"I will ask the Hon'ble the Advocate-General to bring forward the amendment which he proposes, and I would ask the House to vote on both the amendments simultaneously, unless hon'ble members consider that course inconvenient."

The Hon'ble MR. WOODROFFE then moved by way of amendment that "ten per cent." be substituted for "five per cent."

He said :—"I hold in my hands a statement which was furnished to the Select Committee either by the Hon'ble Mr. Lee, or the Hon'ble Member in charge of the Bill, showing what would be the reduction on account of fire-appliances if the reduction were taken at 5 per cent. upon the cost, and what does the Council suppose this extraordinary concession amounts to? In the whole of Calcutta it will amount to Rs. 620, and if baled jute were further excluded, there would be an additional Rs. 758-8-9. Therefore, if the amendment of the hon'ble member is carried, then it comes to the question whether the deduction should be 5 per cent. or 10 per cent. Ten per cent. would give a certain measure of relief—and, as I understand, a material measure of relief—to the smaller warehouses, but nothing whatever to the larger warehouses and presses; still, in the interests of those smaller warehouses, I venture to put it to the Council that it will be proper to make an allowance of 10 per cent. on the outlay for appliances for preventing and extinguishing fires and not 5 per cent."

The Hon'ble MR. LEE said :—I will vote with the Hon'ble the Advocate-General, as I think his amendment will have the effect of relieving the smaller rather than the larger warehouses.

The Hon'ble DR. MAHENDRA LAL SIRCAR said :—"In my opinion every encouragement should be given to warehouses for making provision for extinguishing fires, and as I myself intended to bring forward the amendment which has been moved by the learned Advocate-General, I will support his motion."

The Hon'ble BABU GONESH CHUNDER CHUNDER withdrew his Motion.

The Hon'ble MR. WOODROFFE'S Motion was put and agreed to.

The Hon'ble Mr. Cotton said:—"Sir, with your permission obtained at the last meeting of the Council, I have the honour to move the amendment which stands against my name in respect of section 12 of the Bill. It is necessary for me briefly to explain the history of this section. As the law now stands, and as the Council are aware, licenses are granted by the Municipal Commissioners, and the same law which we are now repealing empowers the Municipal Commissioners to cancel or suspend the licenses of any warehouses. The complete power of cancelling and suspending licenses as well as of granting them, rests under the existing law with the Municipal Commissioners. The power of granting licenses has been modified in accordance with the provisions of this Bill. The Bill proposes a further modification in respect of the procedure to be followed in suspending or cancelling such licenses—a very much less important matter, I may say. As a fact, I do not believe that during the many years the Municipal Commissioners have administered this provision of the law, there has been any case in which they have cancelled a license. If there have been any such cases, they have been very few and far between, and this I know cannot be one of the matters in which the members of the Council would allege that the Commissioners have abused their powers. But as the power of granting licenses has been taken from them, it follows that the procedure for cancelling and suspending licenses must also be modified.

'Under the existing law' the Commissioners have the power of cancelling or suspending licenses in respect of which one or more of the conditions under which the license is held appear to have been broken, and also if the owner of a warehouse neglects to give notice of a change of occupation. And so it came to pass that, when the present Bill was being drafted and modifications in the procedure were agreed on, it was enacted that, whenever the Chairman of the Commissioners receives credible information that any of the conditions to which the license of a warehouse may be subject has been broken, he may apply in writing to the Magistrate, and, after proving his case and satisfying the Magistrate that such cancelment or suspension is necessary to prevent danger or injury, the Magistrate will then try the case judicially and decide whether the license shall be suspended or cancelled or not. But, Sir, I apprehend that in the Select Committee the fact was lost sight of that the conditions of the license are materially changed. Under the existing law a number of conditions are imposed which find no place in the present Bill, with the exception of two only: one is that a warehouse shall be liable to inspection; the other is that the annual fee shall be payable in respect of it. The other conditions have found their place as substantive offences to which penalties are attached under Chapter III of the Act; while one or two of the conditions have been relegated to the category of details to be specified in the application for a license, and if they are furnished in a way considered unsatisfactory by the Chairman, the application may be refused. There is no doubt that the first of the two conditions which remain in the Bill, namely, that the warehouses should be open to inspection, is a very important one; and that, if broken, it should render the license liable to be suspended or cancelled, as the case may be. But there are also other offences which may be committed by the owners of warehouses, such, for instance, as the offence specified in section 19 of the Bill, which imposes a penalty for preparing inflammable substances and exposing them on the roof of a building—one of the principal causes of fires in jute warehouses. If an offence of that character is committed, then it is eminently desirable that the license should be cancelled. This was one of the conditions under the old Act. It is no longer a condition, but is provided for as an offence with a penalty; and it seems to me that, in respect of this and other offences which may be committed by the owner of a warehouse, the Chairman of the Commissioners should be competent to move the Magistrate to adopt the procedure laid down in the Bill under this Act for offences committed under Chapter III.

"I may take this opportunity of drawing the attention of the Council to the fact that the duty of instituting prosecutions under the law is one which no longer rests with the Chairman of the Commissioners, or with the Commissioners in meeting. At present, under the existing law, the Inspector of Jute Warehouses is a servant of the Corporation. He is the executive officer responsible for seeing that the conditions of the license are complied

with, and for bringing to notice offences committed under this Act, and for instituting prosecutions before the Magistrate. At present, therefore, prosecutions are instituted by a subordinate of the Commissioners and with their authority. Under the Bill, as it is drafted by the Select Committee, the Inspecting Officer will be an officer to be appointed by the Commissioner of Police. He shall be a member of the Fire-brigade, but shall not be a member of any Police Force. He will, however, be under the orders and at the disposal of the Commissioner of Police. The executive control of warehouses passes from the Chairman of the Corporation to the Commissioner of Police. And therefore it is that this section 12, as proposed to be amended by me, is so drafted that, whenever the Chairman of the Commissioners receives credible information that a condition of the license has been broken, or that an offence is committed, he is authorised to lay this information before a Magistrate with a view to applying for the cancelment or suspension of the license. This information would, in the first instance, be communicated to the Chairman by the Commissioner of Police through the Jute Inspector, and the Chairman will then be in a position to move the Magistrate to take the judicial procedure contemplated by section 12 for suspending or cancelling a license.

"With this explanation, Sir, I have the honour to move that in sub-section (*1*) of section 12, after the words 'has been broken by the holder thereof' the words 'or that any offence for which a penalty is prescribed under Chapter III of this Act has been committed by any holder of a license' be inserted."

The Hon'ble Mr. Woodroffe said:—"I rise to support the Bill as it left the hands of the Select Committee. The conclusion at which they arrived was not obtained without considerable discussion and as much consideration as the members of the Select Committee could bring to bear upon it; and the conclusion to which they arrived was that the matters and things dealt with in the clauses relating to procedure are not matters which justified the suspension or cancellation of licenses, but are properly and sufficiently dealt with by imposing pecuniary penalties. The penalties, if hon'ble members will take the trouble to look at the Bill, are by no means light In truth, the Hon'ble Member in charge of the Bill desires to impose a double punishment; so that persons who commit any of the offences for which penalties are prescribed would be liable, in addition to those very serious pecuniary results, to cancellation or suspension of their licenses. The hon'ble member's proposed amendment is, I take it, intended to include offences under section 17, neglecting to notify change in occupation of warehouse; under section 18, giving false information respecting a license; under section 19, to which the hon'ble member referred, where the owner or occupier of a warehouse preparing or causing to be prepared or dried any inflammable substance on the roof of a warehouse is liable to Rs. 50; under section 21, using warehouse as a residence; under section 22, for bringing or using matches or artificial lights, and under section 23, smoking in a warehouse—offences which were liable to a penalty of Rs. 10. Persons committing any of the above offences would not only be liable to the very serious penalties provided in the Bill, but under the hon'ble member's amendment, be liable to have their licenses cancelled or suspended.

"I venture to submit to the Council that the conclusion arrived at by the Select Committee should not be so materially altered as the hon'ble member proposes to do by his motion. I ask therefore that the Council should uphold the clause as it left the Select Committee. That clause deals with matters in respect of which licenses may be cancelled or suspended. The conditions on which they are held are set out in the license. They are (*1*) the non-payment of the license fee, and (2) that which goes to the root of the whole matter, namely, the slightest attempt to prevent due and proper inspection by the officer appointed for the purpose. For the breach of these conditions, the Select Committee thought more severe measures should be resorted to, namely, the suspension or cancellation of the license."

The Hon'ble Mr. Lee said:—While I think, sir, that there ought to be some such power as exists now under the Fire-Brigade Act for the revocations of the licenses of habitual offenders, I cannot agree with the hon'ble members

in charge of the Bill that the duty of conducting prosecutions should be thrown on the Chairman of the Commissioners. There is no provision in this Bill to enable him to meet the expenses of criminal proceedings, and I don't know why they should be met from the general sanitary funds of this city."

The Hon'ble MR. WOODROFFE, rose to order, and asked the Hon'ble the President whether it was relevant to the motion whether the expenses of criminal proceedings should fall on the Corporation.

The Hon'ble MR. LEE said that was the reason why he was unable to support the hon'ble mover of the amendment, that it threw upon the Chairman of the Corporation the duty of prosecuting offenders with the view of cancelling their licenses. It has been explained by the hon'ble member in charge of the Bill that the inspection of warehouses has been removed from the hands of the Commissioner to those of the Commissioner of Police. If, then, any prosecutions are to be undertaken, let the Commissioner of Police pay for them.

The Hon'ble THE PRESIDENT said:—"With regard to the call to order by the Hon'ble the Advocate-General, the objection which the Hon'ble Mr. Lee has taken, seems to me to be an objection which he has a right to take, though I hardly see that it applies. If in his opinion the amendment would throw extra expenditure on the Chairman of the Corporation, it seems to me that he is not out of order in taking that objection."

The Hon'ble MR. LEE, continuing, said:—"Yes, Sir, this amendment if passed would throw extra expenses upon the Chairman of the Corporation, the expenses of the law Courts. It would be necessary for him to proceed when offences are committed under Chapter 3 of the Bill. It would occasionally be incumbent upon him to take proceedings under section 12 which he would not have to take as the Bill now reads. I think there is some slight misapprehension, for I am not sure whether I understand the learned Advocate-General right in saying that any person who commits the offences mentioned in sections 17, 18, 19, 21, 22 or 23 will be liable to have his license revoked or suspended. I do not find it so provided anywhere. [The Advocate-General:—"I did not suggest that. I said that if the hon'ble member's amendment be carried it might have that effect."] For this pecuniary reason, then, I record my vote against the motion."

The Hon'ble MR. LAMBERT said:—"It seems to me, as regards the matter which has fallen from the Hon'ble Mr. Lee regarding the cost of prosecutions, that no such cost will fall on the Commissioners. Section 12 merely applies to occasions in which the Chairman of the Commissioners may receive credible information, and that credible information will, I apprehend, be given to him generally by the Inspector of Warehouses. All that would be required of the Chairman of the Commissioners would be to determine, on receipt of information from the Inspector, whether he found it necessary to apply to the Magistrate for an order to suspend or cancel a license. If the information seemed to him to be sufficient, he would instruct the Inspector to apply to the Magistrate, and then the case would be proceeded with. If he considered the information insufficient, no further action would take place.

"As regards the motion now before the Council, it seems to me that section 2 as it now stands limits the class of offences for which a license may be cancelled, to a refusal to admit the Inspecting officer or for declining to pay the annual fee. The probability of the institution of prosecutions on either of these grounds is hardly worth considering. Regarding offences under the penalty clauses, by clause (2) of section 12 it is provided that the Magistrate shall not make an order suspending such license unless he is satisfied that it is necessary to prevent or obviate immediate danger or injury of a serious character. Even the discretion of the Magistrate is fettered by this clause. And it certainly seems to me that the offence for which a penalty is provided in section 19, which has been referred to, may possibly be of so dangerous a character that on a proper representation to the Chairman he might think it necessary that

the license be suspended, and the Magistrate in exercising his discretion under clause (2) of section 12 might think it necessary to pass an order to prevent immediate danger. On these grounds I shall support the amendment of the Hon'ble Member in charge of the Bill."

The Hon'ble MR. PLAYFAIR said:—"This is a section which was very carefully considered by the Select Committee; and I support the section as amended by the Select Committee, and the views set forth by the learned Advocate-General."

The Hon'ble MR. COTTON in reply said:—"I have only a word or two to say in reply. I can sympathise with the feelings of the learnd Advocate-General and of the Hon'ble Mr. Playfair, in desiring to give every protection to the owners of warehouses against having their licenses arbitrarily cancelled. I think, however, that there is very little risk of that in any case, because, as I observed to you just now, I doubt whether there is a record of any license having been cancelled by the Commissioners, but it is possible that the Chairman of the Corporation might desire to cancel a license. In such a case it will obviously be impossible for him to act in an improper way, owing to the extremely elaborate procedure which this Bill lays down. He must make a written statement which is laid before a Magistrate; the Magistrate would then issue a summons to the owner of a warehouse and would then try the case judicially, and even then he would not grant the order applied for by the Chairman unless he is satisfied that it is necessary to do so to prevent immediate danger or injury. I can hardly conceive of a procedure which is more elaborate and more calculated to prevent the arbitrary cancellation or suspension of a license.

"With regard to the financial difficulty to which the Hon'ble Mr. Lee referred, I must say it seems to me to be visionary. Under section 27 of the Bill, which is so drafted as to cover any legitimate charge against the funds of the fire-brigade, if any expense is incurred by the Chairman of the Commissioners in instituting cases under section 12 of the Act, it would legitimately fall on such funds. But I agree with the hon'ble the Commissioner of Police that such charges would be infinitesimal.

"At the suggestion of the President, I will propose a verbal amendment in the Motion I am laying before the Council, by specifying the sections of Chapter III referred to. I would add the words 'or to any offence for which a penalty is prescribed under sections 17, 19, 21, 22 and 23 of this Act has been committed by any holder of a license.'"

The Hon'ble THE PRESIDENT said:—"This is a motion which affects a question belonging to the police or the judicial side of the business, and therefore the restriction I imposed upon myself of not expressing my views as regards any question of imposition or distribution of taxation, does not apply, and I think it well that I should make one or two remarks on the subject. The proposal is, that the penalty which the Select Committee imposed on certain offences, should be considerably enhanced by the addition of the possible suspension or cancellation of the license. In one of these cases (section 17) I observe that the penalty which is provided by the existing law has been reduced from Rs. 100 to Rs. 10, and therefore it would seem as if an enhancement of the penalty would be contrary to the intention of the Select Committee. If, in its discretion, the Select Committee, in addition to the provision that the Magistrate may impose a penalty of so many rupees a day as long as the offence continues, had added a clause that, in the event of the offence being continued or repeated on (say) three occasions, the license may be suspended or cancelled, I should have seen no objection to that legislation. But as the Select Committee have not done that, and as no new or strong reason has been given in favour of the amendment, I fall back on the canon that the general rule we should follow is, that where no new light or no new considerations have been brought forward, it is well to support the Bill as it has been amended by the Select Committee; and therefore I am opposed to the Motion."

The original Motion being put, the Council divided:—

Ayes 2.	*Noes 10.*
The Hon'ble Mr. Lambert.	The Hon'ble Maharajah Ravaneshwar Prosad Sing Bahadur.
The Hon'ble Mr. Cotton.	The Hon'ble Maulvi Syed Fazl Imam, Khan Bahadur.
	The Hon'ble Mr. Playfair.
	The Hon'ble Babu Gonesh Chunder Chunder.
	The Hon'ble Mr. Wallis.
	The Hon'ble Dr. Mahendra Lal Sircar.
	The Hon'ble Mr. Lee.
	The Hon'ble Mr. Risley.
	The Hon'ble Mr. Allen.
	The Hon'ble Mr. Woodroffe.

So the Motion was negatived.

The Hon'ble Mr. Woodroffe, by leave of the Council, withdrew the motions of which he had given notice, that in subsection *(1)* of section 12 after the words "upon the holder of the license," the words "and in the case of an alleged breach of any of the conditions of the license" be inserted; also that after the words "be cancelled or suspended" the words "and in the case of the alleged commission by such holder of any such offence to show cause why the penalty prescribed for such offence should not be imposed upon him" be inserted, and that after the words "and may also" the words "in the first of the cases above mentioned" be also inserted.

The Hon'ble Babu Gonesh Chunder Chunder moved that in sections 22 and 23, after the word "warehouse" the words "used for the pressing or screwing of jute or cotton" be inserted.

He said:—"If you read sections 22 and 23 with section 21, it would appear that there is a prohibition against using as a residence a warehouse for jute or cotton only. The question is, whether it is possible to use a warehouse as a human residence without taking therein matches or artificial lights, unless duly and thoroughly protected, or without smoking therein. I submit that, if it is intended that a warehouse other than a jute or cotton warehouse should be allowed to be used as a human residence, then those restrictions should not be put upon them. But if that is not the intention, then the words which I propose should be inserted in this section."

The Hon'ble Mr. Woodroffe said:—"As a matter of fact I believe the words to which the hon'ble member has referred were omitted by mistake, and it appears to me that there is full reason for the suggestion he has made. But the question arises whether the omission is covered by the definition of 'warehouse' in section 3, clause 9, which is as follows:—'Warehouse means any building or place used for the storing or pressing or keeping of jute, cotton, oil, resin, varnish, pitch, tar, coir, hay, straw, rags, tallow, ship-chandlery, wood, or other inflammable substance or thing for the time being subject to the operation of this Act.' And there may be a question whether a warehouse which is used for nine months of a year only as a warehouse should be subject to any penalties. I would suggest that the words of section 21 be used in sections 22 and 23, by which a penalty can only be levied if at the time of the commission of the act jute or cotton be stored therein."

The Hon'ble Dr. Mahendra Lal Sircar said:—"If this Bill is passed, then hay and straw depôts will become warehouses. I know for certain, that the abominable *hookah* has been the cause of many dangerous fires, and I think that *hookahs* should not be allowed to be introduced into warehouses."

The Hon'ble Babu Gonesh Chunder Chunder in reply said:—"There is no law to prevent artificial lights and matches from being used in hay and straw godowns, and it will be very hard to introduce such a provision into the

Bill. Probably the owners do not live in them; but other people live there. The number of warehouses under the Act has been increased to a great extent, and it will be hard not to allow their being used as residences."

The Hon'ble MR LEE asked if he would be out of order if he proposed to add "straw and hay" to the motion. It would be in accordance with the precedent followed in the case of 'oil.'

The Hon'ble THE PRESIDENT said:—"I wish to point out to the Council the extreme inconvenience of springing upon the Council motions of this kind. I think I shall not be going beyond my proper position if I ask the Council seriously to consider, before coming to this Chamber, what they are going to move, so that it should be possible for them to hand in in writing the motion which they intend to propose before the discussion begins. In this case, two of the speakers have generally declared their unwillingness to include hay and straw depôts in these punitive provisions, and now one member desires that they should be included. I think it very inconvenient that such amendments should be brought forward in the middle of the discussion, when it was in the power of hon'ble members to bring them forward earlier, so that they might be placed on the List. I think it right to decline to allow this motion to be put before the House."

The Motions were put and agreed to.

The Hon'ble MR. WOODROFFE, by leave of the Council, withdrew the motions of which he had given notice, that in section 25 the words "shall rateably impose the annual fees payable for licenses under section 10 of this Act upon all warehouses, and" be omitted; also that in line 7, for the word "such" the word "the" be substituted, and that after the word "fees" the words "payable for a license under section 10 of this Act" be inserted.

The Hon'ble MR. WALLIS moved that in line 1 of section 26, for the word "may" the word "shall" be substituted.

He said:—"Although Rule 42 provides that 'amendments shall ordinarily be considered in the order of the clauses to which they respectively relate', I would beg, in moving the first amendment which stands in my name, to be allowed to refer to the other two amendments which I am to move, and which appear in the same section of the Bill. The object which it is desired to attain, is identical in each case; and the amendments will of course only be put to the Council in the order in which they appear on the List of Business.

"The first amendment, which I have the honour to move, is in line 1 of section 26, that for the word 'may' the word 'shall' be substituted.

"The objects which is desired to attain by the amendments, which I have the honour to move, are that the half per cent. rate on bastis and the one-eighth per cent. rate on the annual value of all houses and lands assessed under the provisions of the Bengal Municipal Act of 1884 and the Calcutta Municipal Consolidation Act II of 1888, as provided in the Bill, shall be levied in full, and shall form the basis of taxation for the up-keep of the fire-brigade.

"In support of this view I would like to refer to the Report of the Select Committee, in which the following remarks occur:—

'In view of the primary responsibility imposed upon the Commissioners, we have, by section 26 of the amended Bill, while exempting the owners or occupiers of a warehouse licensed under the Bill from further liability, empowered the Commissioners to levy the three following rates:—

(a) a two-and-a-half per cent. rate assessed on buildings or places used for the storage of inflammable substances, which the Government may declare liable to the payment of this rate; the amount, however, to be levied in any one case not to exceed Rs. 100:

(b) a half per cent. rate assessed on basti lands:

(c) a general one-eighth per cent. rate on all houses and lands assessed under the Municipal Acts affecting the Municipalities concerned.'

"It will be remembered by the Hon'ble Member in charge of this Bill, and also by the other members of the Select Committee, that at the several meetings

when this question of apportioning the mode of differential taxation was considered, on each occasion I pressed that the proper way to proceed was to first decide what portion of the cost of the brigade should be met by the general tax-payer ; this, I urged; would give a known quantity, as it would be levied on the rates and taxes, and any balance required should be rateably imposed on the industries coming under the definition of warehouses and other buildings, for the storage of goods of a less inflammable class.

"I hold in my hand, Sir, a paper in original, which I took to several of the meetings of the Select Committee, and which I handed to the Hon'ble Mr. Cotton and to the learned Advocate-General. This paper shows, Sir, that I assumed the cost of the brigade to be a maximum of Rs. 75,000. It suggests:—

	Rs.
'1st.—That a rate of ⅛ or 2 annas per cent. should be levied on all houses and lands as they are assessed for municipal taxation, and I took roughly the value of such houses and lands as Rs. 1,80,00,000 which would realize about	22,500
'2nd.—That a rate of ½ or 8 annas per cent. should be levied on all basti lands, which, taken at Rs. 31,16,563, the valuation given by the Hon'ble Mr. Lee on the 19th of December, would realize about	15,000
Total ...	37,500'

"I think, Sir, I may venture to say that it was very much on the lines suggested that the Committee came to a decision as to the form of taxation which should be adopted, and in agreeing to the section of the Bill, which is numbered 26, and to the clauses (*b*) and (*c*) of that section, I certainly thought that they could not possibly be construed in any other way; but I find from the statement which was handed to hon'ble members at the meeting of the 4th of February that at the foot of that statement the rate on bastis is taken at 4 annas per cent., and that on pucca buildings at one-and-a-half annas per cent. According to my views, and I think some of my colleagues are of the same opinion, this is wholly contrary to what we anticipated, as we were under the impression that the basis of taxation was to be the charging of a rate of 8 annas per cent. on bastis and a two-anna per cent. rate on the general tax-payer.

"As shown in my original paper, the sum which would be realised from this form of taxation amounted to Rs. 37,500, and this works out very closely if the valuation of bastis and houses given us by the Hon'ble Mr. Cotton are taken. I find the statement shows that bastis are—

	Rs.
Valued at Rs. 31,14,616, which at 8 annas per cent. would realize	15,572
That the valuation of pucca buildings is given at Rs. 1,51,39,953, which at 2 annas per cent. would realize	18,924
To this was added receipts under section 26, clause 1(*a*) ...	750
Then we have to take receipts from rates levied from Cossipur-Chitpur	500
Ditto ditto from Manicktolla ...	100
Ditto ditto from Howrah ...	1,000
or a total of ...	36,846

as against Rs. 37,500, estimated by me some time ago when the question of taxation was being considered in Select Committee.

"I have taken all the figures given in the statement as correct, and I think the closeness of my estimate and that of the figures just stated shows clearly what was the intention of the Committee; but the statement referred to reverses the order of things, and proposes that only a certain portion of the rate leviable under the Bill on bastis and on the general tax-payer shall be taken, and still leaves the larger share to be borne by the industries coming under the definition of warehouses.

"One of the main objects for which legislation has been resorted to in this instance was the reduction of existing taxation on the jute industry, and for the more equitable distribution of taxation for the upkeep of the brigade. I do not anticipate that the rate of 2 annas per cent. to be levied on the general tax-payer will be objected to by any of the members of this Council, as it has been admitted on all sides that the general public do undoubtedly derive considerable benefit from the brigade. The tax of 8 annas per cent. on bastis is not excessive, considering the danger these places offer, and the difficulty which is experienced in preventing fires occurring in these places from spreading.

"It is perfectly true that the residents of such places belong to the poorest classes, but the proposed taxation is small; and it is better that they should pay a small sum annually for the upkeep of an institution which may some day be the means of saving all the property they possess in the world.

"I was glad to learn from the speech made by my colleague the Hon'ble Babu Gonesh Chunder Chunder, at the meeting of the Council held on 18th February last, that he, too, read the clauses (*b*) and (*c*), as I take them, for, if I understand him rightly, he gave us his reason for voting for an all-round rate that the inhabitants of bastis would only, under that proposal, be called upon to pay a tax equal to a quarter per cent., instead of half per cent., as provided in the Bill. For the reasons stated, I beg to move that in line 1 of section 26, for the word 'may' the word 'shall' be substituted."

The Hon'ble MR. COTTON said:—"It appears to me that this amendment is open to objection on the principle which you yourself, Sir, prominently brought to the notice of the Council a few minutes ago, namely, that it introduces a radical change in the Bill as approved by the Select Committee, and has been introduced into this Council without any new considerations having been urged on behalf of it. If there were no other reason than this, I would ask you to use your influence in rejecting this amendment; for I think, as it is now put by the hon'ble member, this amendment deals very hardly and unfairly by the rate-payers of this city. There is a very wide difference between 'may' and 'shall.'

"The intention of the Select Committee (I speak for myself only, but I understood it to be their general opinion) was that the rates introduced into this Bill should be the maximum rates which might be worked up to on an emergency. I never understood that it was to be compulsory on the Municipal Commissioners to impose these rates either on basti owners or on the general community; and I think it is desirable that the votes of the Council on a matter vitally affecting the interests of the rate-payers of this Metropolis and materially affecting the Municipal Commissioners of the city should not be taken until the Commissioners themselves have had an opportunity of expressing their views on this compulsory taxation or proposed compulsory taxation. They have had every opportunity of commenting on the form of taxation which is proposed by the Bill as drafted by the Select Committee, that is to say, levying a sum up to this rate as a maximum; and it is well known that they are not in favour of it. On that point, I have no sympathy with their objections; but I think that the Commissioners and the rate-payers of this City may strongly object that at a meeting of this Council, without their being aware of the fact, a provision should be passed into law imposing compulsory taxation according to certain limits, which, as I shall show, would effect a very material increase in the burden thrown upon the town. If a half per cent rate is levied on bastis, and one-eighth per cent. on the general community at a maximum, the total will be about Rs. 35,500 in Calcutta alone. I have no data before me to say what the amount will be in Howrah or the Suburbs, but it may reasonably be assumed that it would amount to about Rs. 5,000 more. In other words, the hon'ble member's amendment would impose a compulsory rate of Rs. 40,000 for the maintenance of the fire-brigade, leaving jute and cotton and other warehouses and all miscellaneous receipts to make up the remaining Rs. 20,000 or less required for maintaining the brigade.

"The proposal, in fact, entirely reverses the policy on which this Council has hitherto proceeded. It has hitherto been assumed that the nucleus of the fire-brigade fund should be the fees levied from warehouses as defined in the Bill,

which, under the law at present in force, pay a total taxation of more than Rs. 80,000; Rs. 68,900 being levied from jute and cotton warehouses only, and the sum of Rs. 13,000 or Rs. 14,000 from wood, hay, straw, &c., which are now brought under the Act. The Bill, as it at present stands, will greatly relieve both jute warehouses as well as hay and straw depôts which are highly assessed under the present law. The new law, so far as we have approved of this Bill, declares that the fees on such warehouses should not exceed one-half of the total cost of the fire-brigade, that is to say, it would not exceed more than Rs. 50,000 as a maximum. If the change you are now asked to accept is accepted by the Council, it would arbitrarily reduce the amount so levied to about Rs. 15,000 or Rs. 16,000, and there is no reason whatever that I can see why this large reduction should be made.

"This is, by far, the most important amendment which has been proposed in the Bill during the course of this discussion. It radically affects the principle upon which we have hitherto gone. That principle is that the nucleus of the fire-brigade fund is made up by the fees on and licenses on warehouses, and that what more is wanted to meet the cost of the fire-brigade is to be supplied by taxation on the general public; whereas what is proposed by the hon'ble member is that the nucleus should be made up from general taxation, and what remains over should be supplied by fees on warehouses. That entirely reverses the principle of the Bill. It illustrates no doubt the great difficulty there is in passing a Bill of this nature through a Council where interests are so conflicting. It indicates also the wide difference of opinion which existed while the Bill was under discussion in the Select Committee. No one who was present at the meetings of the Select Committee can be surprised at the wide differences of opinion expressed by hon'ble members when they afterwards met in Council to discuss the clauses of the Bill. That Bill, as it left the hands of the Select Committee was, however, I understood, except in details, generally accepted by the majority of that Committee. It was at least accepted in its main point—the main principle of the Bill which relates to the incidence of taxation. If the Hon'ble Mr. Wallis's amendment is carried, it will revolutionize the Bill as it at present stands; and I hope the members of this Council will think twice and three times before they commit themselves by accepting this amendment."

The HON'BLE MR. WOODROFFE said:—"If the motion of the Hon'ble Mr. Wallis was in opposition to the views of the Select Committee, guiding myself by the observations that have fallen from the President during the course of these debates, I should have felt great hesitation in supporting it. But the amendment is not, as I understand it, in opposition to that view. Before the report of the Select Committee was made, we were furnished with details showing what the annual cost of the fire-brigade was. We further received the assurance of the hon'ble member, the Commissioner of Police, that the cost of maintaining the fire-brigade was practically of a stationary character, and that there was no ground for anticipating that it was likely materially to vary in the time to come. Proceeding on the principle which commended itself to the majority of the Select Committee, namely, that there should not be a general rate, and the Hon'ble Mr. Playfair and myself accepted as securing the largest measure of relief thus obtainable, the principle which the majority of the Select Committee arrived at that it would not be fair or just, in view of the reasons which led to the adoption of this and other matters which were before the Committee, to subject jute and other industries to a tax exceeding 50 per cent. I was at one with the hon'ble mover in this matter. Speaking for myself, I in accord with the hon'ble mover understood that it was as an accepted thing that the taxes leviable under section 26, clauses (*b*) and (*c*), were to be imposed, and figures were laid before us which showed that if they were so imposed, then that which the Bill aimed at would be effected, namely, that there would not be imposed on the jute industry a liability exceeding 50 per cent. We were given to understand that, as expressed in section 24, the Commissioners were, in the first instance, to pay the whole cost of the fire-brigade, and that they were, for the purpose of providing the cost of the fire-brigade, over and above the amount

recoverable as license fees, and with the view of keeping down those fees to the limit proposed to impose certain rates. But to my utter surprise, at the first meeting in this Council, there was handed a statement by the Hon'ble Member in charge of the Bill, showing that the principle adopted by the Select Committee was to be departed from, namely, that the main portion of the expenditure incidental to the fire-brigade was to be taken from the jute and other industries, and that there was to be a much smaller amount taken from those other sources provided in the Bill. Now, Sir, the Select Committee presented their Report, and the views of the Select Committee are embodied, I presume, in that Report; and they deal with this matter in this way. In paragraph 3 they say—

'We were unanimous in the opinion that the Commissioners should be made primarily responsible for the cost of the fire-brigade, and by a majority have decided that the owners or occupiers of warehouses should be liable to contribute, in the shape of license fees, an amount which shall not exceed one-half of the charges.'

"I remember well the discussion which took place on that part and of the Report and which led to the alteration of the draft by the insertion of the words 'shall be liable to contribute half the charges' to the shape in which it now is, namely, 'shall not exceed one-half of the charges.' Then the Report went on to say in paragraph 4:—

'In view of the primary responsibility imposed upon the Commissioners, we have by section 26 of the amended Bill, while exempting the owners or occupiers of a warehouse licensed under the Bill from further liability, empowered the Commissioners to levy the three following rates:—

(a) a two and-a half per cent. rate assessed on buildings or places used for the storage of inflammable substances, which the Government may declare liable to the payment of this rate; the amount, however, to be levied in any one case not to exceed Rs. 100;
(b) a half per cent. rate assessed on basti lands;
(c) a general one-eighth per cent. rate on all houses and lands assessed under the Municipal Acts affecting the municipalities concerned.'

"That that was the plain and obvious meaning of the section of the Bill now under consideration is manifest from the observations of the Hon'ble Babu Gonesh Chunder Chunder, who was not a member of the Select Committee, to which the Hon'ble Mr. Wallis has referred. [The Hon'ble Mr. Cotton said:—"Does the learned Advocate-General interpret the word 'empowered' to mean 'bound?'"] I do not. The words are of an enabling character. 'May' is, however, not frequently read as 'shall.' But when to my astonishment I found from the statement put into my hands that, instead of a rate of 8 annas per cent., only 4 annas per cent. was taken as the rate on bastis valued at Rs. 31,14,616, and one-and-a-half anna per cent. rate was taken on pucca buildings, valued at Rs. 1,51,39,953, and by so doing to shew that the amounts obtainable from these rates was, when taken with the receipts from license fees, insufficient to meet the sum of Rs. 60,000 put down as the estimated cost of the fire-brigade. The consequence was that by reducing the percentage on basti rates by one-half, and by taking the general rate at 1½ annas per cent. instead of 2 annas per cent. on pucca buildings, there is a most serious difference shown. The proceeds of the two totals come to only Rs. 24,250, and the argument was then put forward in Council that there was only Rs. 24,250 available, and that the license fees on warehouses, &c., in Calcutta, Cossipur-Chitpur, &c., would only amount to Rs. 29,000, and so there would not be sufficient to provide for the cost of the fire-brigade. When, as a matter of fact, if the principle of the Bill be taken, and it were made obligatory on the Commissioners to impose the taxes specified in the Bill, then there would certainly not be imposed on the jute and other industries a sum exceeding 50 per cent. of the cost of the fire-brigade. I am in accord with the Hon'ble Mr. Wallis in considering that the basis on which we proceeded was that there was to be this taxation on bastis and pucca buildings, and I for one was not prepared for this mode of dealing with it. It seems therefore to be advisable that the Bill should be amended in the way proposed by the hon'ble mover of the amendment. I accordingly support the motion of the Hon'ble Mr. Wallis."

The Hon'ble Babu Gonesh Chunder Chunder said:—"I think that both my hon'ble friend Mr. Wallis and the learned Advocate-General are under a mis-

apprehension in supposing that I said that in construing section 26 the word 'may' should be read 'shall' in the speech which I made the other day regarding basti owners; what I meant to say was that, under the provisions of this Bill, hut-owners were liable to pay to the extent of 8 annas per cent., and the learned Advocate-General's motion if carried would limit their liability to the extent of 4 annas only: it was better that we should support a measure which would reduce the liability of hut-owners. But I never, by what I said on that occasion, intended to convey the idea that I read the word 'may' in this section as 'shall.'

"As regards the principle of raising this tax, although I was not a member of the Select Committee, I understood the principle to be this: that the jute trade should not be made to pay the whole cost of the fire-brigade as it had hitherto done, but that the Commissioners, who had hitherto had charge of the payment of the expenses of the fire-brigade, should retain that power in their hands; that is to say, they should be primarily responsible to pay the cost to the Commissioner of Police, and they should recoup the expense which they had incurred not in the first instance by raising the taxation provided for in the Bill, but by raising funds according to the directions in the Act from jute-owners, and then by supplementing it by a tax on the general community. That I take to be the principle of the Bill. What the Hon'ble Mr. Wallis now proposes seems to be a new principle, and I therefore cannot support his amendment."

The Hon'ble Mr. Lee said:—As a Member of the Select Committee I wish to say that my remembrance of the views expressed at the meeting of the Select Committee are in strict accord with the memory of the hon'ble member in charge of the Bill, that is to say, I thought it was clearly understood that the maximum rate which we fixed as leviable upon warehouses would be in practice levied up to one-half of the cost of the fire-brigade. The majority said let it be not more than one-half. Let jute, which has now been paying 120 per cent. of the cost, have hay, straw, wood, &c. to assist it, and then let them contribute up to one-half the cost, and let the rest be distributed among the general rates. If this motion were carried it would be worse than if the original motion of the Hon'ble the Advocate-General had received the approval of the Council. The figures quoted by the Hon'ble Mr. Wallis are quite correct. They show as liabilities and charges at maximum rates on buildings and lands in Calcutta alone the sum of Rs. 34,500, and adding what would be received from the other municipalities, it would make a total of Rs. 37,300, leaving out of Rs. 60,000 (which is the cost of maintaining the fire-brigade) the sum of Rs. 22,700 to be collected from all warehouses, and of that sum nearly one-half would be paid by other warehouses than jute; so that we have about Rs. 11,000 to be paid by jute warehouses which last year paid over Rs. 68,000.

As regards Calcutta, I have said that it would have been better if the original proposal of the learned Advocate-General had been carried than if this amendment is carried, because we should then not have lost the whole or even up to Rs. 8,000 which we will now lose from hay, straw, wood, &c. We should have collected from them Rs. 13,000 as before, and we should have been able to apportion the rates in a way that would have been least oppressive. If the proposal had been that Cossipore and Chitpur should pay for the cost of its branch of the fire-brigade which is for yearly maintenance alone about Rs. 7,000, and that Howrah should similarly pay its branch, which also amounts to about Rs. 7,000 (and these figures in each case omit the cost of the capital outlay and charges at head-quarters), and that Calcutta should pay the rest, then the incidence of taxation on Calcutta would not have been so heavy as it would be if the Hon'ble Mr. Wallis's motion were carried.

But there is one point which has been omitted from view, and that is that the assessable value of Calcutta is an increasing value, and therefore in a few years the contribution from warehouses would decrease. The warehouses undoubtedly would be increasing in number, and we should have the absurdity of their contributions being in inverse ratio to the expense and trouble thrown upon the fire-brigade by such warehouses. I have not the least doubt that we should stand by the report of the Select Committee in this case."

The Hon'ble Mr. Playfair said:—"I endorse the views expressed by the hon'ble member who moved this amendment. I understood the sense of the Select Committee to be that the municipalities should levy a rate of one-eighth per cent. on the annual value of houses and lands, and half per cent. on bastis. The Hon'ble Mr. Cotton has remarked that there is a wide difference between the words 'may' and 'shall,' but I was informed when serving on the Select Committee that the legal value of the two words, as applied to section 26 of the Bill, is the same; otherwise I should have made an energetic protest at the time against the use of the word 'may.' It was not until the issue of statement A to members of the Council by the Hon'ble Member in charge of the Bill that his personal ideas of the permissive character of section 26 became known to me. I beg leave to confirm what was said by the learned Advocate-General that that statement formed no part of the papers considered by the Select Committee. I therefore support the amendment, as it correctly embodies what I understood to be the decision of the Select Committee. I feel bound, however, again to express my regret that the Bill does not level up taxation upon the richer for the benefit of the poorer classes of the communities protected by the imposition of an infinitesimal all-round rate, which would not be more than a quarter per cent. on buildings and bastis alike."

The Hon'b'e Mr. Lambert said:—"As a member of the Select Committee I desire to say that it was not present to my mind that there should be afforded to the owners of warehouses, and especially to the jute trade, the measure of relief which is now contemplated by the amendment of the Hon'ble Mr. Wallis. Under the existing law the jute trade paid 120 or 125 per cent. of the expenses of the fire-brigade, amounting to Rs. 68,000 or Rs. 70,000. The cost of the fire-brigade is now about Rs. 58,000, and I informed the Select Committee that it was not likely largely to increase. I stated that it would in all probablity be about Rs. 60,000, and certainly it was present to my mind that the jute industry, aided by the other industries which are called dangerous, should bear one-half the cost of the brigade. By the words "primarily responsible" which appear in the Report of the Select Committee, all that I understood was that the Commissioners would be bound to pay to the Commissioner of Police when he presented his budget the means to meet the cost of the fire-brigade I did not understand that the Commissioners would first levy maximum rates, and then that whatever deficit existed would be made up by fees from warehouses. On these grounds I will certainly vote as I understood the intention of the Bill to be."

The Hon'ble Dr. Mahendra Lal Sircar said:—"That not having been on the Select Committee, I cannot say what was the policy which guided their deliberations, nor is it at all necessary to ascertain whether the amendment of the Hon'ble Mr. Wallis is in accordance with, or in opposition to, that policy, whatever that might have been. The simple question before the Council is, do lands, other than basti lands and houses, other than warehouses, require the protection of the fire-brigade? I think it has been admitted by every one in this Council that they do not; and therefore the owners of these lands and houses should not be taxed at all, if possible, or, if taxed, they should be taxed in the smallest degree. The Bill places the tax on these at one-eighth per cent.; but even if you make it one-and-a-half annas per cent., it will not be fair, and, therefore, so far oppressive. For these reasons I am entirely opposed to the amendment of the Hon'ble Mr. Wallis, and I cannot see why the Council should go beyond what the Select Committee has provided."

The Hon'ble Mr. Wallis said:—"With reference to what has fallen from the last speaker, I think he is mistaken when he states that it is admitted by every member of this Council that bastis and houses other than warehouses in no way require the protection of the fire-brigade; the history of the case is very different, for it is admitted that the general public do derive considerable benefit from the brigade, and especially so the residents in bastis. I hold in my hand a letter from the Commissioner of Police to the Government of Bengal, dated the 26th of December 1890, in which he clearly shows

the danger bastis offer to the town and the difficulty which is experienced in preventing fires in such places from spreading. It is not necessary for me to read this letter as it was referred to by one of the hon'ble members in a previous debate on this question, but I only put it forward to show how necessary a fire-brigade is for affording security to the town from conflagrations in bastis."

The Motion being put, the Council divided:—

Ayes 4.	*Noes* 8.
The Hon'ble Mr. Playfair.	The Hon'ble Maharaja Ravaneshwar Prosad Sing Bahadur.
The Hon'ble Mr. Wallis.	The Hon'ble Maulvi Syed Fazl Imam, Khan Bahadur.
The Hon'ble Mr. Risley.	The Hon'ble Babu Gonesh Chunder Chunder.
The Hon'ble Mr. Woodroffe.	The Hon'ble Dr. Mahendra Lal Sircar.
	The Hon'ble Mr. Lee.
	The Hon'ble Mr. Lambert.
	The Hon'ble Mr. Cotton.
	The Hon'ble Mr. Allen.

So the Motion was negatived.

The Hon'ble Dr. Mahendra Lal Sircar moved that clause (*a*) [with its proviso] of section 26 be omitted.

He said:—"I have deemed it my duty to move the omission of clause (*a*) of section 26, as not only unnecessary, but also as undesirable. The clause had no place in the Draft Bill, and the Select Committee have given no justification for its insertion in the amended Bill. The ostensible object of the clause is to create a source of raising funds. Now, Sir, we have provision for funds in specifically defined sources of revenue, and these are license fees from warehouses and rates from bastis and dwelling-houses. And particular care has been taken to see that these sources are competent to meet the requirements of the fire-brigade. Hence, Sir, I maintain that an additional source of revenue is unnecessary, especially when that source is undefined and uncertain. We must remember that when we are legislating for the taxation of special trades, it should be our duty to define the limits of taxation with the utmost clearness and precision; and it has been well said that that duty becomes imperative when the taxation is for a single particular purpose.

"It may be urged that the clause is intended not so much for the purpose of raising funds as for the purpose of enabling Government to discover inflammable substances not defined in section 3. But, Sir, there is a section, viz., section 41, under which 'the Local Government may, on the recommendation of the Commissioners in meeting, declare any building or place used for the storing, pressing or keeping of any substance or thing other than those specified in section 3, clause (*9*), of this Act, shall be a warehouse within the meaning of, and be subject to the operation of, this Act.' In this section we have provision for the detection of substances other than those specified in section 3. Where, then, is the necessity of making another provision for the same purpose?

"It may be contended that, if discretionary power is given to the Commissioners for discovering inflammable substances other than those already specified, why should not the same power be given to the Local Government in addition? What harm is there in doing so? To this my reply is, why then legislate at all? Why encumber the Act with definitions of inflammable substances? Why not leave these things to the discretion of the Commissioners, or, best of all, to that of the Local Government?

"For my part, I must confess that I am not for giving discretionary power even to the Commissioners. But if that cannot be avoided, I must beg leave

to point out that the power given to the Commissioners has been very wisely restricted to one of recommendation only, the final decision resting with the Local Government. Besides, even this power of recommendation is given to the Commissioners in meeting, which makes a world of difference between absolute power and power so modified. In meeting, the Commissioners will have to discuss any recommendations they may think of making. The representatives of the citizens of Calcutta and the public of Calcutta will have ample opportunity of judging for themselves, before any recommendation can be sent in. Hence the chances of abusing this discretionary power will be infinitesimal.

"But of quite a different character, is the power which the Bill proposes to give to the Local Government. Here the power is absolute; and speaking with the utmost deference before the head of the Government, I may ask what guarantee is there that that power may not develop or rather degenerate into arbitrary power? And when such is the case, then, in addition to the Act which this Bill will become when passed, we may have no end of Acts of a different nature altogether. In fact, in my humble judgment, the clause in question, if retained, would virtually give to the Local Government power to make law without the legislature, which the instinct of modern times feels to be far from desirable.

"Lastly, Sir, I beg to point out that while we have in the clause under consideration provision of an undefined, uncertain, and therefore arbitrary character, for widening the area of taxation, there is no provision whatever for reducing the amounts of the taxes actually defined; and this, it must be admitted, is far from equitable.

"For these reasons, Sir, I look upon clause (*a*) of section 26 as not only unnecessary, but undesirable and objectionable. I would, therefore, move for its omission."

The Hon'ble MR. COTTON said:—"This clause finds its way in the Bill owing to my instrumentality. Under the law as it at present stands, 'jute' and 'cotton' are defined to mean jute and cotton which have not been pressed or screwed as if for shipment. Under the Bill, 'jute' means raw jute, and 'cotton' means raw cotton. Absolutely all forms of pressed jute are excluded from the operation of the present Bill. Now it seems to me very fair and reasonable that pressed jute should be excluded from the category of jute kept in warehouses. But I was not satisfied and I am not satisfied that pressed jute as it comes to Calcutta is not in many cases an inflammable material, of such nature that the buildings in which it is stored should not be specially assessed to a tax for the maintenance of a fire-brigade. There are also many other commodities of a very doubtful character which are not of the eminently inflammable character specified in clause (*9*) of section 3, or which could properly be included by the Lieutenant-Governor in that clause according to the powers vested in him, on the recommendation of the Commissioners in meeting, by a subsequent section of the Bill. It seems to me very possible that oil, of which we have heard so much to-day and which I am far from satisfied is of a non-inflammable character, would appropriately come under clause (*a*) of section 26; and there are many other materials which, although not so inflammable as jute or cotton, or hay, straw, &c., are sufficiently inflammable to make them liable to the payment of a special tax. That is why this provision found its way in the Bill. The rate leviable in such cases would be two and-a-half per cent. only on the assessable annual value, and the limit of taxation in any case is fixed at Rs. 100 in order to prevent an excessive rate being levied. It was intended to draw a distinction between commodities of an eminently inflammable character and those which are less inflammable, and therefore power is reserved, in the hands of the Government, to meet special cases."

The Hon'ble MR. WOODROFFE said:—"This matter of baled jute, to which the hon'ble member in charge of the Bill has referred, was considered by the Select

Committee, who reported to the Council that they had considered the advisability of bringing baled jute within the provisions of section 26 of the amended Bill, but had determined not to do so."

The Motion was put and negatived.

The Hon'ble Mr. Wallis, by leave of the Council, withdrew the motion of which he had given notice, that in clauses (*b*) and (*c*) of section 26, for the words "not exceeding" the word "of" be substituted.

The Hon'ble Babu Gonesh Chunder Chunder, by leave of the Council, withdrew the motion of which he had given notice, that clause (*c*) and sub-section (2) of section 26 be omitted.

The following notices of amendment were by leave withdrawn:—

The Hon'ble Mr. Wallis to move that in clause (*b*) of section 26, for the words "not exceeding" the word "of" be substituted.

The Hon'ble Babu Gonesh Chunder Chunder to move that clause (*c*) and sub-section (2) of section 26 be omitted.

The Hon'ble Mr. Wallis to move that in clause (*c*) of section 26, for the words "not exceeding" the words "of" be substituted.

The Council was adjourned to Saturday, the 11th instant.

Calcutta;
The 14th March, 1893.

C. H. REILY,
Assistant Secretary to the Government of Bengal,
Legislative Department.

RESOLUTION ON THE REPORT ON THE WORKING OF THE EDEN SANITARIUM FOR THE YEAR 1892.

MUNICIPAL DEPARTMENT—MEDICAL.

No. 947Med.

Calcutta, the 14th March 1893.

RESOLUTION.

READ—

The report on the working of the Eden Sanitarium for the year 1892.

Read also—

Report for the year 1891 and the Resolution recorded upon it.

The following table compares the admissions into the Institution during the past eight years:—

	1885.	1886.	1887.	1888.	1889.	1890.	1891.	1892.
Patients ...	192	273	344	336	370	316	356	370
Relatives and attendants	68	120	84	107	122	86	151	44
Total ...	260	393	428	443	492	402	507	414

The number of patients admitted in 1892 was the same as in 1889, which had been the highest on record, but there was a considerable falling off in the number of relatives and attendants. The number of these latter is said to vary according to the nature of the cases admitted, and it is further explained that the unattractiveness of the past season operated to reduce the number of visitors other than invalids. The increase in the number of the sick testifies that the benefits which the Institution is capable of conferring on invalids are becoming more fully appreciated. Orders have recently been issued sanctioning a grant of Rs. 2,000 to the Inspector-General of Civil Hospitals to meet the cost of sending convalescent European sailors from the Calcutta and Howrah Hospitals to the Sanitarium, and if this amount is properly utilized, the Lieutenant-Governor trusts that it will add materially to the usefulness of the Institution.

2. Of the four classes into which patients are divided in the Sanitarium, the second is the most popular, judging from the results of the past four years which are exhibited in the following table:—

	1889.	1890.	1891.	1892.
First class	93	57	75	59
Intermediate class	103	79	123	90
Second class	171	164	169	146
Third "	125	102	140	119
Total	492	402	507	414

3. The Sanitarium, as usual, was open from the 1st March to 30th November. Of the 370 persons treated, 298 were adults—172 males and 126 females. The number of children treated has steadily increased from 46 in 1890 and 58 in 1891 to 72 in 1892. The daily average number of persons residing in the Institution, including 12 patients from the Calcutta hospitals, who occupy free beds, was 35·8, against 44·18 in 1891 and 36·03 in 1890. The average number of days spent in the institution by each patient was 34·24, against 39·08 in 1891 and 27·3 in 1890. By far the largest number of persons admitted into the Sanitarium were suffering from malarial fever or its effects, more

than 50 per cent. of the total admissions being due either directly or indirectly to this cause. Forty surgical operations were performed during the year, against 35 in the preceding year, all of which were successful. There were 8 deaths during the year—2 due to dysentery, 1 to cancer, 1 to disease of the liver, 3 to diseases of the nervous system, and 1 to bronchitis. Most of these cases were in an advanced stage of disease when admitted.

4. The total income of the year amounted to Rs. 31,524 (against Rs. 38,665 in 1891), but this amount apparently includes a sum of Rs. 150 due from patients still outstanding. The details of receipts are Rs. 30,047 received from patients, Rs. 1,060 subscriptions, Rs. 207 interest, and Rs. 59 miscellaneous receipts. The falling off in receipts was due to the smaller number of friends and attendants admitted during the year. The total expenditure amounted to Rs. 31,307 (against Rs. 34,249 in the previous year), and the year closed with a credit balance of Rs. 7,918.

5. A fund was started during the year with the object of providing a free cot for children needing a change to the hills, but the amount raised was not sufficient to form a permanent endowment. The Lieutenant-Governor hopes that the effort will not be abandoned, as the known suitablity of the Darjeeling climate for sick children would render such an institution most useful. The cot was occupied from 23rd June to 4th November.

6. The Lieutenant-Governor has noticed with satisfaction that the superior establishment attached to the Sanitarium worked well during the year. His thanks are due to the Superintendent and to the Committee of Management for the very efficient administration of the Institution.

By order of the Lieutenant-Governor of Bengal,

J. A. BOURDILLON,

Offg. Secretary to the Government of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 11th March, 1893.

Division	No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.					
Burdwan Divn.	1	Burdwan Kalna Katwa Raniganj	March 11, '93	1·16 0·44 0·65 0·15	Weather—very cloudy and cool. Considerable damage done to potato and *rabi* crops. Lands being ploughed. Prices of common rice:— Srs. Sadar ... ... 11 to 13 } per rupee. Kalna ... ... 10 to 13 } Katwa ... ... 13 } Raniganj ... ... 13 }
	2	Bankura Vishnupur	,, 11, '93 ...	0·31 0·45	Weather—cloudy. Lands are being ploughed. Sugarcane pressing going on. Fodder and water sufficient. No cattle disease reported. Rice selling at 11¼ seers per rupee both at Sadar and Vishnupur.
	3	Birbhum Rampur Hát	,, 11, '93 ...	0·63 0·31	The few crops on ground are doing well. Recent rain will assist early ploughing. Fodder and water plentiful.
	4	Midnapore	,, 11, '93	0·15	Weather—hotter and occasionally there is a little rain. Ploughing is being done everywhere. Prices of common rice:— Srs. Sadar ... ... 12½ } per rupee. Contai ... ... 13 } Tamluk ... ... 12 } Garhbeta ... ... 11 }
	5	Hooghly Serampore Jahanabad	,, 11, '93	0·29 0·19 0·13	Weather—cool and cloudy. *Rabi* crops and potatoes considerably damaged by the late rain. Outturn of potatoes at the Sadar is expected to be about 8 annas. There is difficulty in getting fodder and water in Pandua and Dwarbasini. Cattle-disease reported from Dwarbasini, Dadpur, Magra, Pandua, Palva and Balagarh. Prices of common rice:— Srs. Sadar ... ... 11 } per rupee. Serampore ... ... 10 to 11½ } Jahanabad ... ... 11½ to 12½ }
	6	Howrah Ulubaria	,, 11, '93 ...	0·10 0·16	Weather— warmer than before. Wet towards the end of the week. Reaping of *khesari* finished. Condition of cattle good. Fodder and water-supply sufficient. Price of rice 11 to 11½ seers per rupee.
Presidency Divn.	7	24-Parganas	,, 11, '93	0·24	Weather—cloudy. Prospects fair. Ploughing going on. No cattle-disease. Water and fodder sufficient. Prices of rice:— Srs. c. Sadar ... ... 10 to 14 8 } per rupee. Basirhat ... ... 11 7 } Dum-Dum ... ... 12 0 } Barrackpore ... ... 12 0 } Diamond Harbour ... ... 13 0 } Barasat ... ... 10 5 }
	8	Nadia Kushtia Meherpur Chuadanga Ranaghat	,, 11, '93	1·24 0·77 0·55 0·35 0·33	Weather—hot and close during first half of week. Now cool. Fresh rain has fallen and damaged crops to some extent. Harvest of *rabi* proceeding. Price of rice stationary. Fodder and water sufficient.
	9	Khulna Bagerhat Satkhira	,, 11, '93	Nil Nil 0·10	Weather—occasionally cloudy. *Rabi* harvest nearly over. *Boro* doing well. Coarse rice selling at 11 to 14 seers per rupee. Supply of fodder and water sufficient.
	10	Jessore Jhenida Magura Narail Bangaon	,, 11, '93	0·08 0·31 0·85 0·03 0·12	Weather—days getting hot. The rainfall of the week has done injury to some of the *rabi* crops, specially to *matar*, and has damaged the mango blossoms. Lands are being prepared for sowing paddy and jute. Indigo and *til* are being sown. Planting of *boro* paddy going on. Cattle-disease continues in parts of Bongaon. Plenty of fodder and water. Prices of rice slightly risen.
	11	Murshidabad	,, 11, '93	0·42	Weather—seasonable; at times cloudy. Harvesting of *matar*, *musuri* and rye has commenced. The late rain has caused much damage to gram, linseed, *matar* and *musuri*, but has done some good to wheat, barley, indigo, mulberry and sugarcane. Lands are being prepared for *aus* and *aman* paddy. Transplantation of *boro* paddy also going on. Common rice sells at 12¼ seers per rupee. Fodder sufficient for cattle.

	No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and State and prospects of the crops.
BENGAL—*concld.*					
CHITTAGONG DIVN.	12	Chittagong	Mar. 11, '93	Nil	Weather—seasonable. Prospects of crops good. Prices stationary. Condition of cattle generally good. Supply of fodder sufficient.
	13	Noakhali	" 11, '93	Nil	Weather—seasonable. State of *rabi* crops good. Lands being ploughed for *aus* paddy. Fodder and water available. Cattle-disease reported from Begumganj and Senbag. Price of rice 12 to 15 seers per rupee.
	14	Tippera	" 11, '93	Nil	Heat rapidly increasing. Standing crops good. Preparation of land for summer crops universal. Price of rice rising.
	15	Chittagong Hill Tracts.	" 10, '93	Nil	Weather—seasonable, but getting distinctly warmer. Condition of chillies, tobacco and other vegetables fair. *Jum* cutting commenced. No cattle-disease reported. Common rice selling at 10 seers per rupee.
DACCA DIVN.	16	Dacca	" 11, '93	Nil	Weather—seasonable; slight rain fell in Narayanganj subdivision. *Rabi* crops being gathered. *Aman* and *aus* paddy being sown. Fodder available. No cattle-disease. Common rice selling at from 11 to 14 seers per rupee.
	17	Faridpur	" 11, '93	0·46	Weather—unsettled. Harvesting of *rabi* crops in progress, and sowing of paddy and *til* commenced. *Juli* and *boro* paddy doing well. Common rice sells at 12 to 13 seers per rupee. Cattle get fodder.
	18	Backergunge	" 11, '93	Nil	Weather—seasonable. Prospects of crops good. Common rice sells at about 11 seers per rupee. Fodder and water sufficient.
	19	Mymensingh	" 11, '93	0·07	Weather—getting hot in day; cool at night. State and prospects of standing crops good. *Boro* crop is likely to be damaged if there is more rain. Common rice selling at 11½ to 14½ seers per rupee. Condition of cattle good. Fodder and water available.
RAJSHAHI DIVN.	20	Dinajpur	" 11 '93	0·32	Weather—cool and cloudy. The rain will cause injury to mango blossoms. Ploughing of lands for *bhadoi* and jute going on. Price of rice at Sadar 15 seers per rupee; that at Thakurgaon unchanged. Cattle-disease has again appeared in certain parts of the Thakurgaon subdivision; elsewhere condition of cattle good. Fodder and water-supply plentiful.
		Thakurgaon	...	0·45	
	21	Rajshahi	" 11, '93	0·18	Weather—cold and cloudy. Ploughing for *aus, aman*, jute and *til* in progress. Harvesting of *rabi* crops has commenced in some places. Condition of cattle generally good. Price of common rice ranges from 12 to 16 seers per rupee. Fodder and water-supply sufficient.
		Nator	...	0·19	
		Naugaon	...	0·10	
	22	Rangpur	" 11, '93	Nil	Weather—cloudy with slight rain. Lands under preparation for *aus* crops: rice has been sown in some places. Wheat and tobacco very promising. Price of common rice 12 to 15 seers per rupee.
		Nilphamari	...	0·63	
		Gaibanda	...	Nil	
		Kurigram	...	0·02	
		Ulipur	...	Nil	
	23	Bogra	" 11, '93	0·12	Weather—unsettled. Ploughing for *aus* and jute goes on. Common rice sells at 12½ seers per rupee. Fodder and water sufficient.
		Sherpur	...	0·17	
	24	Pabna	" 11, '93	0·21	Weather—cloudy; growing hot. Standing *rabi* crops somewhat damaged by rain. Ploughing of lands continues. Rice selling at 12¼ seers per rupee at Pabna and Rs. 3 to Rs. 4-8 per maund at Sirajganj. Jute sells at Rs. 4-6 to Rs. 4-14 per maund. Condition of cattle good. Fodder and water-supply sufficient.
	25	Darjeeling	" 11, '93	0·02	Weather—finer and warmer, but thick haze mostly prevails. Rain on afternoon of 11th with heavy sky. *In the hills*:—Wheat and barley progressing favourably. Lands prepared for *kagni* and *chota marua*. *Bhutta* has been planted in some places. Potatoes also growing. *In the Terai*:—Ploughing for coming crops continues. Tobacco and barley doing well. *Kauni* being sown in places. Prices of coarse rice:— Srs. Hills ... ... 11 } per rupee. Terai ... ... 13 }
		Siliguri	...	0·49	
	26	Jalpaiguri	" 11, '93	0·42	Weather—cold and cloudy. Land is being prepared for *bhadoi* crops. Harvesting of tobacco continues; outturn estimated at 15 annas. Mustard reaped with a 15-anna crop. Common rice sells at 13 seers 5¼ chitaks per rupee. Fodder and water-supply sufficient. No cattle-disease reported.

	No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR.				
Bhagalpur Divn.	27	Monghyr March 11, '93 Begusarai ... Jamui ...	Nil Nil 0·08	Weather—cloudy at times with a few drops of rain. The damage to *rabi* in Begusarai is put at 4 to 6 annas, in Jamui 4 annas, and in head-quarters not more than 4 annas. There has been no fresh injury to the poppy. The *mahua* and mango blossoms have been injured. The number of cattle lost by cold is put down at 500 in Jamui. Prices of common rice:— Srs. Sadar ... ... 12 to 16½ } per rupee. Begusarai ... ... 16 } Jamui ... ... 14 }
	28	Bhagalpur „ 11, '93 Banka ... Madhipura ... Supaul ...	Nil 0·65 Nil 0·42	Weather—unusually cloudy and cold for March. Standing crops partially damaged by the late rain. Indigo benefited by it. Prospects of crops continue to be good; outturn a little over 12 annas. Common rice 15 seers 2 chitaks per rupee.
	29	Purnea „ 11, '93 Kishanganj ... Araria ...	Nil 0·23 0·04	Weather—cloudy and heavy rain in some localities; cold for the season. Tobacco cutting in progress. Prospects of tobacco, *rabi* and mango threatened by the rain; otherwise good Ploughing for *bhadoi* proceeding. Fodder and water sufficient. Prices stationary.
	30	Malda „ 11, '93 Chanchal ... Shibganj ... Gajole ...	0·03 0·05 0·08 0·03	Weather—cool and cloudy with breaks of sunshine. Prospect of *rabi* crops continues favourable. Transplantation of *boro* rice not yet finished. The rain during the week has done some injury to the mango blossoms. Common rice sells at from 13½ to 16 seers per rupee. Fodder and water abundant.
	31	Sonthal Parganas „ 11, 93 Godda ... Jamtara ... Pakur ...	0·30 0·35 0·11 0·16	Weather—cool and cloudy with some rain. The rainy weather is damaging the *chaiti* crops and the mango and *mahua*. Ploughing is going on briskly. Fodder and water abundant.
Patna Division.	32	Patna „ 11, '93 Barh ... Bihar ... Dinapore ...	Nil Nil 0·20 Nil	Weather—cloudy. *Rabi* being harvested. The state of poppy reported to be satisfactory. The drug is said to be flowing freely, and little or no loss is anticipated from the late rain; about 10 annas collected up to date. Prices of common rice:— Srs. Sadar ... ... 16 } Barh ... ... 11½ or 12 } per rupee. Bihar ... ... 16 } Dinapore ... ... 15 }
	33	Gaya „ 11, '93 Nawada ... Aurangabad ... Jahanabad ...	0·08 0·21 0·10 0·27	Weather—unseasonably cloudy and damp. The continued damp weather has caused about two annas damage to standing crops, and the rain has injured those on the threshing-floors. Late-sown poppy somewhat benefited by the rain, but otherwise considerably damaged; about half the crop has been collected. Prices are, however, fairly easy. Uncleaned rice selling at 14 seers per rupee. Fodder and water-supply sufficient.
	34	Shahabad „ 11, '93 Buxar ... Sasaram ... Bhabhua ...	0·10 0·10 0·21 0·27	Weather—unsettled; cloudy with easterly winds and frequent showers. Much damage has been done to the pulses by the rainy weather, and wheat and barley are attacked in places by blight. Steady sunshine and westerly winds are urgently wanted for the *rabi* harvest, and more particularly the poppy.
	35	Darbhanga „ 11, '93	Nil	Weather—close and cloudy—getting warm. General prospects favourable. Lancing of poppy in progress. Indigo sowing commenced. No rain wanted at present. Cattle healthy. Fodder and water abundant.
	36	Muzaffarpur „ 11, '93 Sitamarhi ... Hajipur ...	Nil Nil 0·03	Weather—cloudy and unsettled and much warmer. Rain has done some damage to the *rabi* crops. The weather continues to be most unfavourable to the opium, and the outturn is at present very unsatisfactory. No disease among cattle. Fodder and water sufficient.

No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR—*concld.*			
Patna Division—concld.			
37	Saran Mar. 11, '93 Siwan .. Gopalganj ...	Nil Nil Nil	Weather—most part of the week cloudy. Crops need sun. Prospects not yet bad. Indigo sowings commenced. Weather again cloudy with slight drizzle since yesterday (10th). Effect on poppy not yet known. Water and fodder ample. Prices of common rice:— Srs. c. Chapra ... ... 13 8 } Siwan ... ... 13 10 } per rupee. Gopalganj ... ... 13 9 }
38	Champaran „ 11, '93	0·02	Weather—fine; sometimes cloudy. *Rabi* doing well. Poppy promises fairly good outturn. Collection of drug and leaf manufacture in progress. Weather cloudy the last two days, with a slight shower to-day (11th) which is not good for poppy, which now requires sun. Indigo sowing retarded in Bettiah by the cold. Sowings commenced in parts of the Sadar. *Jasaria* paddy and *china* sowings proceeding. No cattle-disease. Fodder and water sufficient. No marked change in prices.
ORISSA.			
Orissa Divn.			
39	Cuttack „ 11, '93	2·40	Weather—cloudy most of the week. Any crops on the ground doing well. Supply of fodder and water ample. Current prices of common rice:— Srs. c. Srs. c. Sadar ... ... 10 8 to 14 7 } Kendrapara ... ... 15 0 to 21 0 } Jajpur ... ... 15 12 to 19 0 } per rupee. Banki ... ... 17 0 }
40	Puri „ 9, '93 Khurda ... Banpur ..	0·36 0·91 2·20	Weather—cloudy with occasional showers. Lands being ploughed for next *sarad* crops. Damage to *mung* and *dalua* crops by recent rain reported from parganas Rahang and Serai. Prices of common rice stationary.
41	Balasore ...	...	Report not received.
CHOTA NAGPUR.			
South-West Frontier Agency.			
Chota Nagpur Divn.			
42	Hazaribagh Mar. 11, '93 Giridi ...	0·21 0·05	Weather—cloudy and occasional showers. *Mahua, rahar* and *khesari* have suffered from rain and cloudy weather. It is reported that 8 annas poppy crop has already been collected, and that the poppy yield will improve now that the weather is clearing. Ploughing going on. Common rice 12 to 14 seers per rupee.
43	Lohardaga „ 11, '93	0·62	Weather—cloudy. Ploughing continues. Common rice selling at 13 seers per rupee. Fodder and water plentiful.
44	Palamau ...	...	Report not received.
45	Singhbhum „ 11, '93	1·24	Weather—very unseasonable, more like the rains. *Rabi* crops suffering somewhat from the wet weather. Common rice selling at from 12 to 16 seers per rupee. No cattle-disease. Water and fodder plentiful.
46	Manbhum „ 11, '93 Gobindpur ...	0·90 0·12	Weather—rainy and cloudy throughout district except Chandil to south. Mango and *mahua* will be seriously damaged. Prospects somewhat gloomy. Rice 10 to 14 seers per rupee.

Published for general information.

CALCUTTA; REVENUE DEPT.,
The 14th March, 1893.

H. H. RISLEY,
Secy. to the Govt. of Bengal.

* Mean of 5 days. | † Mean of 6 days.

Explanation.—*Summary.*—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period
The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 01
rainfall the normal mean are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station
district, *i.e.* from total rainfall at the subdivisional stations in the district sending in returns divided by the number of stations. A rainy day is one or

for the week ending Saturday, the 11th of March 1893.

					DISTRICT OBSERVATIONS.

for the last ten years. The variations are *negative* when the mean for the week is less than the corresponding normal mean, and *positive* when greater. The numbers denoting cloud amount represents the part of the sky covered the whole sky being denoted by 10. Under the head District observations of for the period in question during the past ten years. The means of the district are the numerical average of the rainfall returned received in the which at least a tenth of an inch fell.

Statement of Rainfall in Bengal for the week ending Saturday (8 a.m.), the 11th of March 1893.

Meteorological Division.	District.	Station.	Rainfall. Sunday, 5th.	Monday, 6th.	Tuesday, 7th.	Wednesday, 8th.	Thursday, 9th.	Friday, 10th.	Saturday, 11th.	Total number of rainy days.	Rainfall of week.	Average rainfall of week.	Total rainfall since 1st of month.	Average total rainfall from 1st of month.	Total rainfall since 16th October 1892.	Average rainfall from 16th October to date.

Explanation.—... indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the* 14*th March* 1893.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 11TH OF MARCH 1893.

DURING the second half of the previous week fine settled weather had prevailed over the whole province, but conditions were decidedly unusual for the season on account of the very low temperature and decidedly high pressure which obtained. On March the 5th, or the first day of the present week, pressure was falling slowly in the west of the province, while it was rising slowly to moderately at the central and eastern stations. Winds also became southerly at some of the Bihar stations, and temperature remained rather largely in defect of the normal. On this day a well defined barometric depression entered North-Western India, moving in an easterly direction, and its centre was near Deesa, while a small subsidiary depression appeared near Peshawar. On the 6th an area of barometric depression existed between Sutna and Nowgong, while relatively low pressure existed over a large part of Western India. In Bengal pressure was rising at the western and south-western stations, and falling at the eastern and northern stations, but an area of disturbed conditions had reached the south-western districts, and rain was reported on the 6th from almost all stations in Orissa and at a considerable number of stations in Bihar and Chota Nagpur. On the 7th the areas of low pressure had either filled up or had passed away in an easterly direction; a moderate fall of pressure had taken place over Bengal, but pressure was still above the normal by amounts usually exceeding a tenth of an inch, and weather generally again became fair and settled, and only a few local showers occurred in Bihar and Chota Nagpur. On the 8th the barometric changes in Bengal were small, and at most stations pressure was rising, and again conditions appeared fairly settled, but from some cause not easily explainable, the sky began to cloud over rapidly, and notwithstanding the fact that a further rapid increase of pressure took place from the 8th to the 9th, by which the general pressure over the province became in excess of the normal by about a sixth of an inch, very disturbed conditions set in. Thus moderate rain was reported in almost all districts of the province on the 9th, and light irregular winds prevailed in all districts, and at the southern stations in particular north-easterly winds were commonly reported. With the general rainfall accompanying the heavily clouded skies, temperature was still unusually low, the defects being largest at the western stations, where they ranged up to 14°. A slight reaction then set in, and pressure began to fall slowly to moderately on the 10th, but notwithstanding the falling pressure, weather conditions began to improve, and on this day practically no rainfall was reported, and the sky began to clear rather rapidly. On the 11th instant the fall of pressure continued, the fall exceeding a twentieth of an inch in the north-eastern districts of Bengal, but still pressure remained in excess of the normal by more that a tenth of an inch. Winds were northerly at the eastern and southern stations, and generally southerly in Bihar and Chota Nagpur, probably in connection with a small barometric depression in North-Western India, while weather remained fine in all districts except parts of Bihar and Chota Nagpur, where again showers had fallen. Thus again the week has been one of somewhat disturbed conditions with moderate rain in all districts.

Pressure—Has been unusually high throughout the week, and the mean for the period has been in excess of the normal by about 0·12″ or 0·13″. The distribution of this excess, however, has been irregular, and thus at such stations as Rangpur, Jalpaiguri, Bhagalpur, Darbhanga, Motihari, and Chapra, the excess has equalled 0·16″ and upwards. On the other hand, the excess has been less than a tenth of an inch at Chittagong, and at Darjeeling it has only equalled 0·06.″

Temperature—Has again been unusually low throughout the week, and for the whole province the defect in the mean temperature for the period has been 4·8°, while defects exceeding five-and-a-half degrees have been recorded in South-West Bengal and Chota Nagpur.

The distribution of temperature during the week and its variation from the normal value are best seen in the table below, where the average maximum, minimum, and mean temperatures for the week at nine typical stations in different districts of the province are compared with the normal values for the period. The defect again, it will be seen, has been most largely marked in the maximum or day temperatures, which at such stations as Cuttack, Burdwan, Gaya, and Hazaribagh have been about 10° below the normal, while at Calcutta the average maximum or day temperatures have been only 81·8,° or 7·4° below the normal for the week:—

Table showing the excess or defect of the actual mean temperature from the normal for the week ending 11th March 1893.

	Normal mean maximum temperature for the week ending 11th March.	Actual mean maximum temperature for the week ending 11th March 1893.	Variation of actual mean from the normal. Rainfall.—The heaviest falls during the week have occurred in Orissa, which has received an average amount of 0·82 inch, and in Chota Nagpur with a fall of 0·52 inch. The falls in South-West Bengal and North Bengal have averaged from a third to a quarter of an inch, and Bihar has received a tenth of an inch, but the falls in East Bengal have been very small. The actual falls during the week have been largely in excess of the normal in Orissa, moderately in excess in Chota Nagpur and South-West Bengal, and slightly in excess in all other districts except East Bengal, where the fall has been rather largely in defect of the normal, the actual fall not equalling a tenth of the usual amount.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 11th of March 1893:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week. Of highest of each day.	Of lowest of each day.	Of mean for each day.	Average mean of week above or below normal mean of week.	Of week. Average.	Normal average.	Variation.	Rainy days. Average number in week.	Normal average number in week	Variation.	Since 1st of month. Average.	Normal average.	Since 16th Oct. 1892. Average.	Normal average.

The total fall from 1st January to 11th March 1893	5·24
The average fall of the corresponding period for 24 years, S.-G.'s Office ...	2·28

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h, 10h, 16h and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; t, thunder; p, passing temporary showers; ⌓, dew.

A. Pedler,
For Meteorological Reporter to the Govt. of India.

* Includes 26,669 tons and 6,630 tons of coal during 1892 and 1891, respectively, carried for Revenue, for which no "Up" and "Down" register maintained.

† Railway plant and rolling-stock, 9,442 tons and 8,963 tons for the years 1892 and 1891, respectively, for which no "Up" and "Down" register maintained.

Comparative Statement of principal commodities carried on the Eastern Bengal State Railway during the month of December 1892.

INCREASES.

	Tons.
Coal	6,282
Railway and Flotilla consumption principally.	
Jute, screwed	1,629
Silliguri, Haldibari and Saidpur contributed about two-thirds of the increase.	
Kerosine oil	3,665
Due to the prohibition of carriage by boat within certain limits of the port of Calcutta.	
Tea	470
The increase was in despatches from Jalpaiguri. Much of the crop could not be brought earlier into the market owing to the cart roads having been washed away by heavy rains.	

DECREASES.

	Tons.
Rice	503
Charkai and Goalundo show the principal decreases said to be due to short crop.	
Jute, unscrewed	3,587
The principal decreases are in despatches from Serajgunge, Kushtea, Siliguri, Julpaiguri and Hilli. The market was uncertain in December.	

JAMES SHAW,
Examiner of Accounts.

CALCUTTA, *the 7th March* 1893.

BENGAL CENTRAL RAILWAY.

* Includes 500 tons during 1892 carried for Revenue, for which no "Up" and "Down" register maintained.
† Railway plant and rolling-stock 123 tons and 473 tons for the years 1892 and 1891, respectively, for which no "Up" and "Down" register maintained.

Comparative Statement of principal commodities carried on the Bengal Central Railway during the month of December 1892.

INCREASES.

	Tons.
Sugar	200

This increase was almost exclusively in despatches from Jhikargacha.

DECREASES.

	Tons.
Rice	275

The chief decreases are in despatches from Khulna and Bengal Central Flotilla Company's stations, due to merchants having sent the traffic by country boats direct to Calcutta.

JAMES SHAW,
Joint Auditor and Examiner of Accounts.

CONTENTS.

Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal, assembled for the purpose of making Laws and Regulations under the provisions of the Act of Parliament, 24 and 25 Vic., Cup. 67.

The Council met at the Council Chamber on Saturday, the 11th March, 1893.

Present:

The HON'BLE SIR CHARLES ALFRED ELLIOTT, K.C.S.I., Lieutenant-Governor of Bengal, *presiding*.
The HON'BLE J. T. WOODROFFE, *Offg. Advocate-General.*
The HON'BLE T. T. ALLEN.
The HON'BLE H. J. S. COTTON, C.S.I.
The HON'BLE H. H. RISLEY, C.I.E.
The HON'BLE J. LAMBERT, C.I.E.
The HON'BLE H. LEE.
The HON'BLE DR. MAHENDRA LAL SIRCAR, C.I.E.
The HON'BLE A. H. WALLIS.
The HON'BLE GONESH CHUNDER CHUNDER.
The HON'BLE P. PLAYFAIR.
The HON'BLE MAULVI SYED FAZL IMAM, KHAN BAHADUR.
The HON'BLE MAHARAJAH RAVANESHWAR PROSAD SING BAHADUR.

MALARIA IN SHAHABAD.

The Hon'ble MAULVI SYED FAZL IMAM, Khan Bahadur, asked the following question:—

"Whether Government is aware that the construction of irrigation channels in Shahabad has introduced malaria into the district, and that the health of the people has greatly deteriorated in consequence; and, if so, whether the Government has taken any steps or will take steps, and of what nature, to check the spread of the disease."

The Hon'ble Mr. COTTON replied as follows:—"The alleged deterioration of the health of the district of Shahabad, subsequently to the introduction of canal irrigation, has repeatedly attracted the attention of Government. It was brought prominently to the notice of the Sone Canal Committee of 1887, and their remarks on the subject will be found in paragraphs 69 to 77 of their report. The increase of malarial fever was considered to be established. The suggestion that irrigation should be prohibited in the immediate vicinity of towns and villages was thought to be of little practical value, because canal water is rarely used in those lands. With regard to drainage, the Committee held that it was the duty of the authorities to remove obstructions which caused the accumulation of surface water, but that there were no means of dealing effectually with the question of subsoil drainage so as to prevent the rise of the water level in the subsoil generally. Mr. Odling, the Chief Engineer and Secretary to this Government in the Irrigation Department, in a lecture, which he delivered at the Engineering College, Sibpur, on the 23rd February last (a copy of which I shall have much pleasure in placing in the hon'ble member's hands), has touched on this subject. He has shown that rice irrigation requires an artificial supply of about 30 inches of water, which is an addition of from 50 to 75 per cent. to the natural rainfall of the country. This necessarily affects the health of the district; but so long as the people insist on planting rice, which gives an easy and certain outturn in preference to wheat or other cold-weather cereals, this deterioration in health cannot be avoided, except by such measures of despotic interference with the choice of the agriculturists as to the crops they wish to raise, as Government would be very unwilling to adopt. He further asserts that the canals have not stopped the surface drainage of the country, but have on the contrary improved it. Before the canals were constructed 'there was not a stream or small river which was not every two or three miles practically closed by embankments, sometimes a mile in length, constructed across the stream. These embankments were mostly constructed for fishing purposes, but not unfrequently with the view of raising the level of the water and utilising it for purposes of irrigation.' These embankments have to a great extent been cleared away, the channels being taken up as public water-courses on which no encroachments will in future be allowed. The river Kao, for instance, which is the main drainage channel of the district, was, when irrigation works were commenced, completely closed at different points of its course by 14 embankments crossing the stream, and as a drainage channel it had ceased to exist. This has now been remedied, and the same process is going on elsewhere wherever it is found necessary, and this appears to be the most practical step that Government can take towards remedying the mischief to health which the lavish use of canal water for rice cultivation is liable to cause."

LICENSED WAREHOUSE AND FIRE-BRIGADE BILL.

The Hon'ble MR. COTTON moved that the clauses of the Bill, for the regulation of Warehouses and the maintenance of a Fire-brigade, be further considered for settlement in the form recommended by the Select Committee.

The Motion was put and agreed to.

The Hon'ble MR. WOODROFFE moved that, after section 28, the following section be added:—

'The Fire-brigade Fund formed under this Act, and the fire-engines, fire-escapes, horses, accoutrements and other equipments and appurtenances of the fire-brigade, and all stations, buildings and places heretofore acquired, provided or built out of any fund appropriated to the maintenance of the fire-brigade under Act IV of 1883, or any of the Acts repealed thereby, or which shall hereafter be acquired, provided or built under the provisions of this Act, are hereby vested in, and shall belong to, the Commissioners, subject to the control of the Commissioner of Police.'

He said:—"Under the Bill, as it at present stands, and so far as it has received the approbation of the Council, there will be imposed on the general public, through the Commissioners of Calcutta, a considerable charge for the maintenance and up-keep of the fire-brigade, which was not laid on the public before. The general public will have to pay at least fifty per cent. of such expenditure. Under the Bill there is a provision for the acquisition of sites for fire-brigade stations, and for the purchase of the various equipments and appurtenances required for the fire-brigade; but there is no provision in the Bill vesting those sites and things in any body. They ought, I conceive, to be vested in the Commissioners as representing the general public. Next, it appears to be very desirable that the control of the fire-brigade should, in express terms, be secured to the Commissioner of Police. The section, the introduction of which I have the honour to move, is framed with this two-fold object. By Act II of 1872, section 15, it was enacted that all existing public fire-engines, or stables or buildings thereto belonging, except those belonging to the Military Department, or to the Port Commissioners, constituted under Act V of 1870, should be transferred to the fire-brigade, which, by that section, the Justices were to organise and thereafter to maintain. By Act V of 1870, the Commissioner of Police was, under section 17, directed to take charge of the existing fire-brigade with all buildings, animals, &c., thereto belonging. In Act IV of 1883, there is nothing to be found as to the vesting of the proprietary right of the properties belonging to the fire-brigade, or as to the Commissioner of Police having control of the brigade. That is how the law stands at present.

"The practical results to be obtained by the proposed section are that if passed there cannot be at any time any question as to the persons in whom there is vested property in the fire-brigade, and that if it should be thought desirable to sell any site or to secure other sites in more convenient localities, the disposal and acquisition of such sites will be more readily effected. The existing sites and appurtenances have been acquired for the benefit of the fire-brigade in former years by means of the heavy license fees imposed on the jute industry. After the passing of this Bill, the burden will be divided, and the public will, in the shape of general taxation, have with the industries taxed to pay for those sites and equipments. It appears therefore, Sir, but just that the property and funds belonging to the fire-brigade should be vested in the Municipal Commissioners. It seems to me also just that while vesting the Commissioners with the proprietary right in these matters, they should be subject, as they practically have been during a considerable period of time, to the absolute control of the Commissioner of Police. It is not my intention to interfere with that control; nor do I think it could, under the language of this section, be contended that the Municipal Commissioners could interfere with or disturb that control. The proposed section merely provides for vesting in the Commissioners the Fire-brigade Fund, the fire-engines, fire-escapes, horses, accoutrements, and other equipments and appurtenances of the fire-brigade, and all stations, buildings and places heretofore acquired, provided or built out of any fund appropriated to the maintenance of the fire-brigade under Act IV of 1883."

The Hon'ble Mr. Cotton said:—"I regret, Sir, that I should find it my duty to oppose this amendment. It appears to me that there are only two principles before this Council in respect of the executive management of the fire-brigade. Either the fire-brigade must be managed as it is in other countries by the local body concerned, that is to say, in the case of Calcutta by the Calcutta Corporation, or it must be managed by an executive officer appointed for the purpose, as it has been the practice in Calcutta by the Commissioner of Police.

When first the fire-brigade was established in Calcutta, the responsibility of its administration rested with the Justices of Calcutta. The fire-brigade in those days was managed in a very simple manner; but when, in consequence of the large conflagrations in jute warehouses, it was found necessary to increase the fire-brigade, the Justices found themselves unable to administer it efficiently, and they requested the Commissioner of Police to take over charge. This he did, and the arrangement which was come to in 1872 was ratified by the Legislature in 1879, and that arrangement has remained in force ever since. The reason for the arrangement was that the Commissioner of Police, with the large staff at his disposal, is able to administer and control the brigade more efficiently and certainly very much more cheaply than the Calcutta Corporation would be able to do. He is able to administer the brigade thoroughly and efficiently at a cost of something more than Rs. 50,000 a year. There can be no doubt, I think, that if the control were transferred from the Commissioner of Police to the Corporation, the expenditure would be trebled. In Bombay, where the Corporation is responsible for the administration, the cost of maintaining the fire-brigade is about Rs. 1,50,000 a year. It was primarily in order to avoid this large expenditure that the Legislature decided that the arrangement for managing the fire-brigade through the Commissioner of Police should continue, and, as far as I am aware, the Municipal Commissioners of Calcutta have not objected to this arrangement. It is no doubt inconsistent with the general doctrine that those who provide the funds should be responsible for the administration. That is a sound and healthy rule, but it is liable, like all other general rules, to exceptions. The reason for the exception in this case is that the fire-brigade can be managed very much more cheaply by the Commissioner of Police.

"The amendment proposed by the learned Advocate-General recognizes the control of the Commissioner of Police, but it vests the whole property of the fire-brigade in the hands of the Municipal Commissioners; and it seems to me that by so doing it introduces an element of friction and disturbance. Under the Bill as it now stands, the Commissioners of Calcutta will have nothing whatever to do with the fire-brigade or with the licensing of warehouses, except the collecting of the funds necessary for the purpose of maintaining the brigade. The powers hitherto exercised by the Calcutta Corporation have been materially diminished by the provisions of the Bill. It is, as hon'ble members are aware, a sore point with the representatives of the Municipality in this Council that it should be so. But of this I am sure that, if the amendment now proposed by the learned Advocate-General is passed, the sore which already exists will be constantly kept alive. This amendment will act as a perpetual blister which will serve to perpetuate the friction, which possibly, if left alone, may die out. It is inconceivable that the Municipal Commissioners, having the whole property of the brigade vested in them, should not take action under the power which the law gives them. I cannot say what direction that action might take, but there can be little doubt, I imagine, that it would result in interfering with the absolute discretion which the law at present leaves in the hands of the Commissioner of Police in administering the affairs of the brigade. If their interference should not tend in that direction, I cannot say in what direction it would operate; and I, for one, would very greatly regret if we allow a provision to be inserted in this Bill which is likely to produce so dangerous and troublesome an effect.

"There is one other very practical objection to the learned Advocate-General's amendment, and that is, that it is not the Commissioners of Calcutta alone who are interested in the working of this Bill. It is not in the Commissioners of Calcutta alone that the property of the fire-brigade will be vested, if this amendment is passed. But it is in all the Commissioners of the neighbouring municipalities as well as the Commissioners of Calcutta, and it will be absolutely impossible to define what property is vested in the hands of the Commissioners of Calcutta, what property is vested in the hands of the Municipal Commissioners of Howrah, or in those of the Commissioners of Cossipore or Chitpore, or of the South Suburban town. In those outlying municipalities, fire-brigade stations have generally been constructed. The head-quarters of the brigade are in Calcutta itself, and all the property of the

brigade, fire-escapes, horses, accoutrements, equipments, and what not, which are now stationed in Lall Bazar, will, if this section be passed, be vested equally or proportionately, I cannot say what the learned Advocate-General's intention is in this respect, not only in the Calcutta Commissioners, but in those of the Commissioners of the municipalities to which this Act is extended. This is a very practical difficulty against the acceptance of the amendment proposed. I object to it, Sir, both on the ground of the extreme friction which a clause of this nature will be calculated to excite, and I object to it also on the ground of its extreme practical inconvenience."

The Hon'ble Mr. Lambert said:—"I think that this Council will consider that the motion brought forward by the learned Advocate-General ought to be based either on what is equitable, or what is expedient, if not on both. Now, is the proposal an equitable one? At an earlier stage in the debate, the learned Advocate-General insisted with much emphasis that the municipalities had without any kind of justification benefited largely from the Fire-brigade Fund. The amount appropriated for general improvements was said to amount to upwards of a lakh of rupees. The property of the fire-brigade may, at the present time, be estimated at something like two lakhs of rupees, and why this valuable property should now be made over as a free gift to the municipalities, simply because it is proposed to impose on those bodies a portion of the cost, I am at a loss to understand. The property has been paid for wholly by the owners of jute warehouses. If, therefore, the Hon'ble Mr. Playfair were to make any claim on behalf of the owners of warehouses, the proposal would be intelligible. But, Sir, as the matter stands, the Council will, I think, fail to see where the equity of the motion comes in.

"Nor is it expedient? The proposal to vest the control of the brigade in the Commissioner of Police is not a new one. This method of control was decided on twenty years ago, as soon as ever it was found necessary to maintain a brigade at all; and this method was decided for two reasons: economy and efficiency. Now, it is not proposed to disturb this arrangement. The control of the brigade is still to be vested in the Commissioner of Police, but the property of the brigade is to be vested in the Commissioners. I ask whether anyone in this Council Chamber would, in an inportant matter like this, willingly accept control so fettered? The property of the brigade is declared to belong to certain bodies, but the Commissioner of Police is to control it. And the Hon'ble Member in charge of the Bill has explained that there is not one single municipality, but several municipalities. We already know of four. All these are separate bodies. How then is the property of the brigade to be apportioned amongst them? At the head station there are four steam-engines, and most of the plant and horses; at Howrah there is one engine; at Chitpore-Cossipore, one; at Manicktollah, none. Is Calcutta to take all that is at Lall Bazar?; and is Howrah to take what is at Howrah?, and so on. But, even if this were so settled, the property of the municipalities would be constantly on the move—sometimes here, sometimes there. How is all this to be settled? Again, it may be necessary to condemn an engine or stores. How is this to be done? Is each municipality to be consulted; and supposing one of them objects, who is to decide? Sir, if this motion of the learned Advocate-General be carried, there is only one logical sequence. The control of the fire-brigade must be transferred to the municipalities. Let them manage their own property, but do not by your vote sanction what is neither equitable nor expedient, and which must lead to friction and inconvenience."

The Hon'ble Mr. Playfair said:—"The statement has been accepted by members of this Council, that the jute industry founded the fire-brigade as it has been known since 1872, that that industry has been taxed so as to enlarge the resources of the brigade to an extent commensurate with the adequate protection of a metropolitan area not far short of 55 square miles, to provide pension funds and sums to improve the block property of the Corporation; yet it has never been stated to whom the property of the brigade belongs, or in whom it is vested. It is now, however, proposed that the valuable property represented by the brigade shall be made over to the town, that is, it

shall be a new gift, as we have just heard, of two lakhs of rupees from the jute industry to the city, to the Corporation and citizens of Calcutta. Were the Government now to propose that, in consideration of this handsome donation, this real benefit, the jute industry should be relieved of fire-brigade taxation for, say, a period of five years, it would do nothing more than show a just concern for the interests of a community which, though small, has done a very great deal towards developing the prosperity of this City.

"The funds of the fire-brigade have been so freely utilized for other purposes that I gladly support any proposal that might in future confine the expenditure of these funds solely to the purposes of the brigade, and that would make some single body responsible for the equipment of the brigade. So long as particular industries continue to be assessed to special and differential taxation, I consider it most necessary that the expenditure of the contributions levied from them should be jealously watched. On the supposition that the amendment before the Council has this object in view, I give it my support."

The Hon'ble Mr. Woodroffe in reply said :—"This motion has been opposed by the Hon'ble Member in charge of the Bill on two grounds: first, he says it will operate as a perpetual blister, and, secondly, that it is impractical in its character; and he has alluded to there being some friction, as I understand him, between the Municipality and the Commissioner of Police. [The Hon'ble Mr. Cotton:—"None at present."] How this provision can operate to cause friction of any kind which should be dreaded, I am unable to see. It was said by the hon'ble member that the fire-brigade has been managed, whilst under the control of the Commissioner of Police, in a most economical manner. I trust the hon'ble member will accept my assurance that I in no degree doubt that statement; nor is it any part of this amendment to alter the position of affairs as regards the control of the Commissioner of Police. So far, therefore, as the remarks of the Hon'ble Member in charge of the Bill are concerned, as regards economy and good management, I am at one with him. It is said that the Municipal Commissioners have not objected to the present state of things. What is the present state of things? I was in hopes that the Hon'ble Member in charge of the Bill would have favoured the Council with his opinion as to the persons in whom the property is vested at the present moment. That the Commissioners have not in times past insisted upon an express recognition of their proprietary right may well be, because in those days the general body of rate-payers did not contribute towards the cost of the fire-brigade. No doubt, in the time to come, when this Bill is passed into law and funds have to be provided by the general body of the rate-payers, we may expect that those rate-payers will be less supine in the consideration of their interests, and the safe-guarding of their property, than the Commissioners were when they did not tax the rate-payers at all. If everything is, as I have every reason to believe it to be, perfectly straight and perfectly satisfactory, then I have not such fear and dread of the rate-payers taking such action as the law allows. I think it very desirable that persons should take such action as the law allows them.

"I am not a believer in arbitrary power; my contention is that, whilst the Commissioner of Police should have complete control over the fire-brigade, the Municipal Commissioners should know what the property consists of, and that it should be treated in law as belonging to them. But my hon'ble friend suggested that there was a practical difficulty in the matter. The practical difficulty which suggested itself to him is, that the term used in the amendment is 'the Commissioners,' and that term is defined in the Bill, as he rightly points out, to include not merely the Commissioners of Calcutta, but also the Commissioners of the various suburban municipalities. The term was used by me of set purpose, in order to avoid the difficulty which the hon'ble member seemed to find. It is not my intention, and I do not think the proposed section can be read so as to vest in the Calcutta Corporation portions of the property, and in the Commissioners of Howrah, Cossipore, &c., other portions. For the purposes of this Act, the whole of those Commissioners have the property vested in them; and therefore the section will prevent the occurrence of that which has been described as a blister and as a friction. It will not in any way enable the Corporation to come in and make an objection to a particular mode of dealing with that portion of the

fire-brigade property which is within its limits. Far from it. The property would be vested in the whole of the municipalities concerned, and there would therefore be no ground for the Calcutta Commissioners laying claim to the property in Lall Bazar, or any other particular property. It has been admitted by the Hon'ble Member in charge of the Bill that the general rule is, that to those who pay belong what they pay for. That I understand is the highest principle of law, and it will be found that there is nothing in this section to prevent there being a perfect safeguard in maintaining the complete control over the property of the fire-brigade being in the hands of the Commissioner of Police."

The Hon'ble THE PRESIDENT said :—"I am sure the Council will feel some hesitation in differing from the learned Advocate-General on an amendment which has been brought forward, on a matter which is mainly one of legal scope. I came down to this meeting without having formed any definite view as to what the meaning and effect of this amendment, if carried into law, would be, but I venture to say that the result of the discussion to my mind has been to create the opinion that it would be unwise and dangerous to pass this amendment. It is admitted that, under the present law, which has been in force since 1883, the property of the fire-brigade is not legally vested in any one. This may be technically an anomaly, but I think we should require of any one who wishes to remove that anomaly that he should show that inconvenience has arisen from it hitherto. Apparently, so far as I have understood the debate, no such inconvenience has been felt. If therefore we are to remove an anomaly, from which no inconvenience has arisen, we ought to do it by legislation, the results of which are clear and patent to all.

"It seems to me that the amendment which has been proposed might produce results which are not anticipated, and, at any rate, that there is considerable difference of opinion in the minds of hon'ble members as to what those would be. As far as I understand the question, the advantages which the Advocate-General has referred to as to be brought about by the passing of his amendment are already provided for in the law. The Commissioner of Police has to prepare an annual budget; that budget has to be laid before the Municipal Commissioners at a meeting and may be criticised and modified by them, such criticism and modification only taking effect, if ultimately they are approved by the Local Government. Again, at the close of the year, the Commissioner of Police has to present a report of the working and the expenditure of the fire-brigade, which is to be published in the Gazette. All information, therefore, which is needed by the public, who contribute by the payment of taxes towards the maintenance of the fire-brigade, will be conveyed to them under the provisions of the present law. But it seems to me that it might be a very dangerous thing if there is an obscure region in which the authority of the Commissioners and of the Commissioner of Police might possibly clash. I think we are justified in trusting to the good sense and moderation of both the Municipal Commissioners and the Commissioner of Police that there will be no clashing; but it would be unwise for the Legislature to introduce an amendment, the result of which would be to involve things in obscurity, and possibly clashing, which none of us desire and which can lead to no good result. I shall, therefore, vote against the amendment."

The Motion being put, the Council divided:—

Ayes 3.	*Noes* 10.
The Hon'ble Mr. Playfair.	The Hon'ble Maharajah Ravaneshwar Prosad Sing Bahadur.
The Hon'ble Babu Gonesh Chunder Chunder.	The Hon'ble Maulvi Syed Fazl Imam, Khan Bahadur.
The Hon'ble Mr. Woodroffe.	The Hon'ble Mr. Wallis.
	The Hon'ble Dr. Mahendra Lal Sircar.
	The Hon'ble Mr. Lee.
	The Hon'ble Mr. Lambert.
	The Hon'ble Mr. Risley.
	The Hon'ble Mr. Cotton.
	The Hon'ble Mr. Allen.
	His Honour the President.

So the Motion was negatived.

The Hon'ble MR. WALLIS moved that the following section be added after section 28 of the Bill:—

'The Fire-brigade Fund formed under this Act, and the fire-engines, fire-escapes, horses, accoutrements and other equipments and appurtenances of the fire-brigade, and all stations, buildings and places heretofore acquired, provided or built out of any fund appropriated to the maintenance of the fire-brigade under Act IV of 1883, or any of the Acts repealed thereby, or which shall hereafter be acquired, provided or built under the provisions of this Act, are hereby vested in the Commissioner of Police, subject to the control of the Local Government.'

He said:—"The amendment which stands in my name is identical with that which was brought forward by the learned Advocate-General, and which has just been lost, except that my proposal is, that the property of the brigade shall be vested in the Commissioner of Police, subject to the control of the Local Government, instead of in the Municipal Commissioners as suggested by the Hon'ble Mr. Woodroffe.

"It seems to me beyond question that the valuable property of the brigade should be vested in some responsible official, and no arguments are required to prove that the official most suited to be entrusted with this charge is the Commissioner of Police, as the Chief Executive Officer of the brigade, and under whose sole orders the fire-brigade is worked. Throughout the whole Bill this officer is recognized as the person to whom Government will look for the efficient working of the brigade, and it seems but reasonable that the property should be vested in him, thus making him legally responsible for everything appertaining to or belonging to the brigade. In the event of land being acquired for the purposes of the brigade, it would be vested in the Secretary of State. In the first place, the Commissioner of Police, under section 8, clause (1), is empowered to appoint the Inspector of Warehouses. Under section 24 the Municipal Commissioners have leave to pay to the Commissioner of Police the sums required to meet the cost of the brigade. Under section 27 it is the Commissioner of Police who has to frame the annual budget and to distinguish in the receipts of such budget the proportionate sums to be contributed by the several municipalities. Under section 31 the Commissioner of Police is deputed to maintain an efficient fire-brigade, and finally under section 42 the Commissioner of Police has to submit a report to the Local Government showing the constitution, assets and working of the fire-brigade during the year.

"It will be seen from the sections to which I have ventured to draw the attention of hon'ble members that this officer is in every way held responsible for the equipment and efficient working of the brigade. It is therefore nothing but right that, as the Commissioner of Police is thus made liable, nothing should be done which is likely to hamper his freedom of action, which would interfere with the economical working of the brigade or impair its efficiency.

"It must be remembered that an immense saving is effected by Government allowing the Commissioner of Police to act as chief of the brigade, and in permitting the subordinate members of the police force to assist in cases of emergency. I understand that no charge has been made at the head-quarters of the police for stabling, accommodation for fire-engines, vans, breaks, &c., godowns for stores or quarters for men, and this may be considered an ample return for any benefit the Police Funds may derive by using the horses belonging to the brigade. It must be remembered that the horses would, under any circumstances, have to be kept in exercise, and were it not for the use they get in the police vans, &c., special men would have to be kept for the purpose.

"I think I have said enough to show that, if the property is to be vested in any particular official, the Commissioner of Police is the one in whom it should be so vested.

"With these remarks I would move the amendment which stands in my name."

The Hon'ble MR. WOODROFFE said:—"Although it is very desirable that the property in question should be declared to be vested in some person, I confess there is some difficulty in enacting that such person should be the Commissioner of Police. The proposed section refers to the Commissioner of Police, whilst the hon'ble member suggests that the landed property will be vested in

the Secretary of State, but the amendment which he has proposed vests it in the Commissioner of Police. There are, I think, very serious questions involved in the proposed new section which ought to be avoided, if possible."

The Hon'ble MR. ALLEN said :—" It appears to me that this amendment is decidedly of a very doubtful character, because the Commissioner of Police *qua* Commissioner of Police cannot hold property. In what capacity can he hold property? In England the Rector of a parish can hold property because under the English law he is a corporation sole, but the Commissioner of Police is not a corporation sole, Calcutta being ruled by English law. I speak with great hesitation in the presence of the Advocate-General, but apparently his view is almost identical with mine. Could the Commissioner of Police institute a civil suit? A large number of powers are conferred upon the Commissioner of Police, but they are exercised for the purposes of police. The property of the fire-brigade is mostly moveable property, and mere possession of that moveable property gives the possessor a right against wrong-doers. The mere fact of his having this property in his charge will entitle him to maintain a prosecution for theft. The property being mostly moveable property, there would appear to be no difficulty in protecting it under the ordinary law. But as to immovable property, the question is doubtful. That must vest in some body. I presume that all the immoveable property belonging to the Government and now occupied by the police is vested in the Secretary of State. I can see no difficulty in allowing the property which the police hold for fire-brigade purposes to be regarded as being also vested in the Secretary of State, and it appears to me, therefore, that it would be wiser not to press this very doubtful amendment."

The Hon'ble THE PRESIDENT said :—" I venture to suggest, after what has fallen from the legal advisers of this Council, to the effect that the passing of this amendment would be contrary to law, that the hon'ble mover will perhaps see fit to withdraw the amendment."

The Hon'ble MR. WALLIS, by leave of the Council, then withdrew the amendment.

The Hon'ble MR. WOODROFFE moved that, in section 46, the words " coir," "oil" and "ship-chandlery," wherever they occur, be omitted.

The Motion was put and agreed to.

The Hon'ble MR. COTTON moved that, for section 47, the following be substituted :—

'47. Sections three hundred and forty-seven of the Calcutta Municipal Consolidation Act, 1888, and two hundred and sixty-one of the Bengal Municipal Act, 1884, are hereby repealed, in so far as they entitle the Commissioners to levy fees in respect of premises licensed as depôts for hay, straw, wood, rags, jute or other dangerously inflammable material, which are licensed and used as warehouses under this Act.'

He said :—" The amendment which stands in my name is of a formal character only, and is intended to extend the repeal of the law, in so far as the imposition of a special tax on hay, straw, wood, &c., applies in the Municipality of Calcutta, to other municipalities to which the Fire-brigade Bill has been or may be extended. By an oversight the Select Committee repealed this section in respect of the Calcutta Municipality only. It escaped notice that a similar provision is contained in the Bengal Municipal Act, and that a similar repeal should therefore be enacted in respect of such articles of an eminently dangerous and inflammable character as are enumerated in the Bengal Municipal Act. The amendment before you makes the proposed repeal apply equally to the Calcutta Municipal Consolidation Act and to the Bengal Municipal Act of 1884, and the concluding words of the section repealing the existing law, in so far as it enables the Commissioners to levy fees, in respect of premises licensed as depôts for hay, straw, wood, rags, jute or other dangerously inflammable material which are licensed and used as warehouses under this Act, make it sufficiently clear that the repeal cannot extend to any other

municipality than those to which this Act will apply, or may hereafter be extended. It is only under the Bill now before the Council that warehouses can be licensed and used under the Act. But if this point, in the opinion of my legal friends opposite, is not clear, I shall have no objection to a postponement, in order to reconsider the terms of the section and make it quite clear. I believe, however, that the amendment, as it stands, is not open to any such objection."

The Hon'ble Mr. Woodroffe said:—"I understand that the Hon'ble Member in charge of the Bill has asked for my opinion on this matter. In answer I have to say that I do not see any objection to the proposed amendment. I believe it was by an oversight that we did not take power under the Bill to deal with the mufassal municipalities in the same way as in the case of the Calcutta Municipality."

The Hon'ble the President said:—"I may explain that the difficulty which, I believe, I suggested to the Hon'ble Member in charge of the Bill was, that it appeared to me that as the section in the Bill stands, it precludes taxation of depôts for hay, straw, &c., in all municipalities in Bengal, and not only in those municipalities to which the present Bill applies. This difficulty is, however, an unusual one, for the Hon'ble the Advocate-General agrees with the Hon'ble the Chief Secretary that the introduction of the final words in his amendment would confine it to those warehouses which are licensed under the Act; and this will apply it only to the municipalities of Howrah, Cossipore-Chitpore and Maniktollah, and will prevent its being applied to other municipalities."

The Motion was put and also agreed to.

The Hon'ble the President said:—"We have now disposed of all the amendments which have been brought before the Council, and it is only necessary to hold one more meeting to pass the Bill as amended. It will now be printed and circulated in its revised form, and there will be a final opportunity fôr any verbal alterations which may be found to be required before it is passed into law at the next meeting of the Council. It will be convenient to allow more than one week for this purpose. The Council will, therefore, be adjourned for a fortnight."

The Council adjourned to Saturday, the 25th March, 1893.

Calcutta;
The 21st March, 1893.

C. H. REILY,
Assistant Secretary to the Govt. of Bengal,
Legislative Department.

RESETTLEMENT OF CERTAIN PRIVATE ESTATES AND GHATWALI TENURES IN THE SONTHAL PARGANAS.

REVENUE DEPARTMENT—LAND REVENUE.

Calcutta, the 14th March 1893.

RESOLUTION No. 1291.

READ—

A letter No. 1507R., dated 6th August 1892, from the Commissioner of Bhagalpur, with enclosures, reporting on the resettlement of certain private estates and ghatwali tenures in the Sonthal Parganas.

Read also—

Letter from this Government to the Commissioner of Bhagalpur, No. 3632L.R., dated 21st October 1892, and his reply No. 2527R., dated 19th November 1892.

Law and rules under which settlement has been made.

The Land Revenue paid by the estates in the Sonthal Parganas district is permanently settled, but the relations between the zamindars and raiyats are controlled by Government, and a settlement is made of the rents and rights of the raiyats under the provisions of Regulation III of 1872. The first settlement of rents in the Sonthal Parganas district was begun in that year, and was completed in November 1878 for terms of seven and ten years. During the years 1887 to 1889 applications were made to the Deputy Commissioner by certain zamindars and ghatwals for a revision of the settlement, on the grounds that the term had expired, that the measurements recorded had been very roughly made, and that, although there had been a considerable extension of cultivation since the previous settlement, no rents could be obtained for such land without a new settlement. Government at first directed that the applications should be granted under Regulation II of 1886, but it was finally decided to carry out the work under Regulation III of 1872, as supplemented by Regulation II of 1886. The objection that Regulation III of 1872 did not provide a sufficient guarantee for the recovery of the cost of the operations to be undertaken was met by the applicants depositing the costs in advance. During the progress of the operations rules were framed for the guidance of the Settlement Officer, under the provisions of the two Regulations. In Government notification, dated the 16th April 1889, rules under section 10 of Regulation III of 1872, and section 30 of Regulation II of 1886, relating to measurement, record of rights, and other matters, were prescribed; and in April 1891 the Lieutenant-Governor, after visiting Dumka, drew up, in consultation with the local officers, rules for the settlement of rents in supersession of rules which had been previously framed, but found to be unworkable.

Names of estates settled and their total area.

2. In the orders dated the 10th September, 16th November, and 12th December 1889, 34 estates and ghatwali tenures which lie scattered in the Dumka, Deoghur, Jamtara, and Godda sub-divisions were notified for settlement under the two Regulations. In addition two villages—Sitakatain and Killa Bhadrain—which are not estates, were settled under Regulation II of 1886. A complete list of the areas settled, including the two villages last mentioned, is subjoined. The aggregate area has been found to be 463,432·32 acres, or 724·11 square miles, comprised in 1,432 villages:—

In the Dumka Sub-division.

1.	Taluk Mohila.	13.	Taluk Ranibahal.
2.	„ Pandey Keso.	14.	„ Dhadka.
3.	„ Jhapania.	15.	„ Polma.
4.	„ Mathakeso.	16.	„ Gundhrakpur.
5.	„ Kakui.	17.	„ Sikarpur.
6.	„ Titmo.	18.	„ Porepahar.
7.	„ Lakhanpur.	19.	„ Sankerra.
8.	„ Ashua.	20.	„ Beloodabar.
9.	„ Dhunria.	21.	„ Dumka.
10.	„ Goalsimla.	22.	„ Karaya.
11.	„ Kumrabad.	23.	„ Cheptiam.
12.	„ Sirsa.	24.	„ Goreenala.

In the Deoghur Sub-division.

25. Taluk Deoghurabad.	28. Taluk Tangidih.
26. ,, Banhaiti.	29. ,, Dhanoria.
27. ,, Punasi.	30. ,, Rohini.

In the Jamtara Sub-division.

31. Taluk Norianpur.	32. Taluk Pabia.

33. Sitakatain in taluk Pindari.

In the Godda Sub-division.

34. Taluk Belbathan.	35. Tappeh Barkope.

36. Killa Bhadrain in pargana Godda.

Settlement and Assistant Settlement Officers.

3. Mr. J. A. Craven, Deputy Magistrate and Deputy Collector, was appointed Settlement Officer. Field operations were begun on the 15th November 1888, Mr. Craven and the Assistant Settlement Officer, Babu Jogendro Chandra Bhanjo, each taking charge of one party. Three separate parties worked during the field season 1889-90—the first or Deoghur and Jamtara party under Mr. Craven's personal supervision; the second or Dumka party under the supervision of Babu Jogendra Chandra Bhanjo; and the third or Godda party under Babu Rash Behari Dutt, Second Assistant Settlement Officer. During the season 1890-91, the same number of parties were employed, but Mr. Craven was relieved of the charge of his party by Babu Balaram Das Gupta, the Special Kanungo, who was appointed Third Assistant Settlement Officer. The field work was completed in March 1891. In regard to settlement, the most important work was the determination of rents on the principles laid down by Sir Charles Elliott in the rules of April 1891, the chief heads of which are explained in paragraph 9 of the Commissioner's review. The record of rights drawn up at the last settlement having been found defective in some respects, it was also necessary that the Settlement Officer should prepare, under the rules of April 1889, a fresh record of rights for every village under settlement. This part of the work was done in a very complete and thorough fashion, and included many miscellaneous proceedings of a varied character, some of which are referred to below. The unit of settlement was, as before, the village, and not the estate. The publication, under section 24 of Regulation III of 1872, of copies of the khatian-jamabandis, and of the record of rights, was completed by the 15th February 1892. For almost the whole period covered by the proceedings, Mr. Craven worked under the supervision and control of Mr. Carstairs, the present Deputy Commissioner, and his final report was submitted on the 1st July 1892.

4. The following statements show (1) the progress of the work and (2) the different classes of petitions, their number, and the ratio per cent. of the number of raiyats:—

Statement showing the progress of work.

Season.	Number of villages measured.	Area surveyed and measured (in acres).			Boundary disputes decided.	Number of original khatians prepared.	Number of villages of which rents calculated according to old rates.	Original khatian jamabandis explained to raiyats.	Khatians copied (in duplicate and triplicate).	Assessment sheets drawn up fixing soil rates.	Abstract khatian jamabandis prepared according to the final rules.	Number of villages in which jamabandis are explained to raiyats.	Number of objections disposed of (exclusive of boundary disputes).	Number of enquiry papers with regard to records of rights.	Number of records of rights prepared.	Enquiry into appointment of mustajirs.	Number of pattas and kabuliyats prepared.	Number of villages in which records are locally published.	Number of settlement misls formed (in two parts).	Number of indexes prepared for the misls.	Number of villages for which index or ajmuli maps are prepared.	Settlement registers prepared (No. of villages).	Villages in which excess waste and forest are excluded under section 15, Regulation III of 1872.	Copying khasra from manuscript to printed forms.	
		Cultivated.	Uncultivated.	Total.																				Number of villages.	Number of plots.

5. The 1,432 villages which have been surveyed and measured cover an area of 212,610·82 acres rent-paying and 250,821·5 acres non-rent-paying lands. Of the rent-paying area 211,310·12 acres are cultivated, and 1,300·7 acres uncultivated. Of the non-rent-paying area 1,923·5 acres are cultivated, and 248,898 acres uncultivated. The total cultivated area is thus 213,233·62 acres, and the total uncultivated area 250,198·7 acres. The proportions of the total cultivated and uncultivated areas to the whole area are 46 and 54 per cent. respectively. The average rent of cultivated land is Re. 1-1 per acre.

Particulars of lands.

Proceedings were taken under section 15 of Regulation III of 1872 in 48 villages for the exclusion of excess forest and waste. These excluded areas have been mapped and measured, and pucka boundary pillars have been erected. Proceedings were drawn up for every village headship, as also for every village settled khas. Rules regulating the rights of raiyats in regard to the village forest and jungle have been laid down, with a view to the permanent preservation of the village fuel and the timber supply. The village pasture lands, on which all raiyats are allowed to pasture their cattle, have been separately measured and defined, and the same has been done as regards the village common lands.

6. The total number of raiyati holdings is 36,733, and the average area per holding is 6·03 acres. The total number of sub-tenants is 8,941, and the average area of each sub-holding is 1·19 acres. The total number of headmen's private jotes amounts to 1,249, and the average area of each such jote is 24·97 acres. There are 659 official jotes held by headmen, their average area being 5·14 acres.

Number and area of holdings.

7. The particulars of land in the whole tract under settlement are shown in the following statement :—

	Class of cultivator.	Number of holdings.	Cultivated area. Acres.	Cultivated area. Average area per holding.	Rent. Payable for the first five years.	Rent. Payable from the sixth year.	Rent. Average rent per acre.	Uncultivated area in acres.	Total area in acres.

Rent.

8. The area under cultivation at the last settlement was 126,158 acres according to a doubtful estimate. The cultivated area now measured is, as above noted, 213,233·62 acres, giving an increase of 87,075·62 acres or 69 per cent. The rent has increased from Rs. 1,60,088-11 to Rs. 2,27,192-8, showing an increase of Rs. 67,103-13, or 41·9 per cent., equivalent to 45·6 per cent. of the cost of survey and settlement. The increase in the rent is therefore less than the increase in the cultivated area, and the rate per cultivated area has fallen (if the estimate of the former cultivated area may be accepted) from Re. 1-4 to Re. 1-1. The proprietors have thus secured, at a comparatively small outlay, (*a*) a considerable enhancement to their rentals, and (*b*) in the place of only rough approximations to the cultivated areas of the last settlement, an accurate and authoritative record of both cultivated and uncultivated areas in their estates. Of the total increased rental, Rs. 3,924 will not, according to Rule 6 of the Government Rules of April 1891, take effect until after the expiration of five years; this amount representing the aggregate excess increase over Rs. 100 per cent in the rents of individual raiyats. In other cases the new rents took effect from the beginning of the Bengali year 1299.

Headmen.

9. The headman, manjhi, mustajir, or pradhan is elected by the villagers when the office falls vacant, either by reason of his dying without a male heir, or being removed for misconduct. He is the head of the village police, and can be removed only by the Deputy Commissioner. He collects the rents from the raiyats except in the villages under khas zamindari management, where the rents are collected by the zamindar's amla. He receives a commission on his collections amounting to 6¼ per cent., or one anna per rupee, from the raiyats, and an equal sum from the zamindar, his nij-jote lands being assessed like other lands of the village. He is allowed to reclaim and cultivate the waste lands in the village without paying rent, or to settle such lands at half-rates with the other raiyats, the other half being appropriated by him; and he has the option of holding in his own possession or settling with other non-resident raiyats the jotes of absconded raiyats or of those who have died without heirs. His jote therefore consists of his private lands and the land which he acquires by virtue of his office. The latter constitutes his official jote. The headman's private and official jotes have been separately recorded in the record of rights; and the lands reclaimed by the headman during his term of office have been recorded as part of his private jote. The office of headman is not saleable, the only exceptions to this rule being the cases of (1) the memorialists to whom certain concessions were granted in Government order No. 1617, dated 7th June 1877, and (2) those settlement holders who were recorded as múl raiyats at the former settlement. The right of alienation in those cases does not include the right of splitting up the headship.

Raiyats.

No raiyat can be evicted except by the order of the Deputy Commissioner, who sanctions eviction only on the ground of non-payment of rent. Only money rents have been settled at certain recorded rates, which are also applicable to under-raiyats. The raiyati jotes are heritable, but not transferable.

Cost.

10. The cost of the operations amounted to Rs. 1,47,158-11-9, which have been paid by the proprietors of the estates under settlement. The average cost is therefore about 5·1 annas per acre on the total area of cultivated and uncultivated lands. The expenditure includes the cost of—

	Rs.	A.	P.
Tents	2,880	7	3
Furniture	698	8	0
Instruments	2,135	3	0
	5,714	2	3

The Lieutenant-Governor approves the Commissioner's suggestion that the tents, furniture, and instruments be kept for future use. They will be valued and paid for from the funds deposited for the settlement, the amount of the valuation being then refunded to the proprietors of the estates now resettled in proportion to their contributions.

11. A Notification under section 5 of Regulation III of 1872, declaring that this settlement has been completed, will be published in the *Calcutta Gazette* of the 15th March 1893, the publication of the records of rights under section 24 having been completed, as stated before, on the 15th February 1892.

Economic information.

12. The Lieutenant-Governor has read with pleasure the interesting economic information contained in the report of the Settlement Officer, relating to the distribution of the area among different classes of cultivators; the system of agriculture, wages, food, dress; the areas of the several classes of land; the proportionate increase in each since the last settlement, and the principal products with the areas covered by each. The total areas of rice and bari lands (*i.e.*, lands on which crops other than rice are grown) at present under cultivation are as follows:—

				Acres.
Rice	...	...	...	106,732·41
Bari	...	...	...	106,501·21

Representing the whole tract under settlement by 100, the proportions borne by the rice lands and the bari lands to the whole area are respectively 23 and 22·9 per cent. The proportion of the areas covered by the several kinds of crops is shown below:—

Rice.	Indian-corn.	Sugarcane.	Wheat.	Oils eeds.	Pulses.	Cotton.	Indigo.	Total.
50·05	10·6	2·7	2·23	7·33	24·09	2·4	0·6	100

Irrigation.

Bandhs or embankments thrown across the jores or narrow streamlets, so as to form reservoirs, are the chief means of irrigation in this district, and are constructed by the Sonthals without any assistance from the zamindars. The total area covered by bandhs and tanks is as follows:—

					Acres.
In the estates in Deoghur		...	...	...	1,962·7
Ditto	in Jamtara	...	...	...	1,690·6
Ditto	in Dumka	...	...	...	1,495·1
Ditto	in Godda	...	...	...	983·7
			Total	...	6,132·1

Or 9·5 square miles.

Mr. Craven estimates that the area now protected by irrigation from all sources taken together amounts to about 34,748 acres, and that the proportion borne by the present irrigated area to the whole cultivated area is about a sixth.

Condition of Diku and Sonthal raiyats.

The ordinary Diku or non-Sonthal cultivator is fairly well off. The Sonthal is thriftless and fond of drink. He is consequently always in debt and in difficulties with his mahajan.

Maintenance of settlement records.

13. Rules for the maintenance of the settlement records were sanctioned in Government order No. 3254L.R., dated 27th August 1892.

14. The Lieutenant-Governor desires that his acknowledgments may be conveyed to Mr. Craven for the careful and thorough manner in which this survey and settlement have been carried out, and to Mr. Carstairs for his efficient supervision of the work.

ORDER.—Ordered that this Resolution be published in the *Calcutta Gazette*, and that a copy be forwarded for the information of the Commissioner of Bhagalpur.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Secretary to the Govt. of Bengal.

DONATION BY HIS HIGHNESS THE MAHARAJA SCINDIA BAHADUR OF GWALIOR.

GENERAL DPARTMENT—EDUCATION.

Calcutta, the 17th March 1893.

RESOLUTION No. 1105.

READ—

Letter from the Director of Public Instruction, Bengal, No. 1000, dated the 18th February 1893.

THE Lieutenant-Governor has learnt with pleasure that His Highness the Maharaja Scindia Bahadur of Gwalior has placed at the disposal of the Principal of the Presidency College, Calcutta, a donation of Rs. 500 to be invested in a 4 per cent. Government promissory note, the interest accruing on which is to be utilized in awarding annually a medal or money prize, in His Highness's name, to that student of the Presidency College who, on passing the First Arts Examination, stands next in order of merit to those who gain scholarships or other prizes.

2. The acknowledgment of Government is due to His Highness the Maharaja Scindia Bahadur of Gwalior for his kind donation.

ORDER.—Ordered that a copy of this Resolution be forwarded to the Director of Public Instruction and to the Accountant-General, Bengal, for information; also that the Government of India, Foreign Department, be requested to forward a copy, with the permission of His Excellency the Viceroy and Governor-General in Council, to His Highness the Maharaja Scindia Bahadur of Gwalior.

Ordered, also, that a copy of this Resolution be published in the *Calcutta Gazette.*

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Secretary to the Govt. of Bengal.

CONTRIBUTION MADE BY BABU RAJ RAJESWAR PROSAD SING, OF SOORAJPURAH, TOWARDS THE COST OF THE ARRAH WATER-WORKS.

No. 1019M., dated Calcutta, the 18th March 1893.

From—J. A. BOURDILLON, ESQ., Officiating Secretary to the Government of Bengal, Municipal Department,

To—The Commissioner of the Patna Division.

I AM directed to acknowledge the receipt of your memorandum No. 13G., dated the 13th January 1893, with which you forward a copy of a letter from the Chairman of the Joint-Committee, Arrah Water-works, reporting that Babu Raj Rajeswar Prosad Sing, of Soorajpurah, has offered to contribute a sum of rupees one lakh-and-a-half towards the cost of the water-works, of which the sum of one lakh of rupees has already been deposited in the Bank of Bengal to the credit of the Collector of Shahabad.

2. In reply, I am to say that the Lieutenant-Governor has much pleasure in accepting the offer of Babu Raj Rajeswar Prosad Sing, and to request that an expression of His Honour's thanks may be conveyed to him for his public spirit and liberality. This letter will be published in the *Calcutta Gazette.*

CONTRIBUTION MADE BY DEWAN ROY JAY PROKASH LAL, C.I.E., OF DUMRAON, FOR EXPENDITURE ON WORKS OF PUBLIC UTILITY IN THE DISTRICT OF SHAHABAD.

No. 1020M., dated Calcutta, the 18th March 1893.

From—J. A. BOURDILLON, ESQ., Officiating Secretary to the Government of Bengal, Municipal Department,

To—The Commissioner of the Patna Division.

I AM directed to acknowledge the receipt of your letter No. 834G., dated the 6th December 1892, in which you report that Dewan Roy Jay Prokash Lal, C.I.E., of Dumraon, has placed to the credit of the Collector of Shahabad in the Bank of Bengal a sum of Rs. 25,000 to be expended on works of public utility in that district.

2. In reply, I am to say that the Lieutenant-Governor has much pleasure in accepting the offer of Dewan Roy Jay Prokash Lal, C.I.E., and to request that an expression of His Honour's thanks may be conveyed to him for his public spirit and liberality. This letter will be published in the *Calcutta Gazette*.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 18th March, 1893.

Division	No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.					
BURDWAN DIVN.	1	Burdwan	March 18, '93	0·76	Weather—decidedly warmer the last two days. *Rabi* crops only moderate owing to damage done by recent rain. Sugarcane being cut and lands being ploughed. Prices about the same. Prices of common rice:— Srs. Sadar ... ... 10½ to 13 per rupee. Kalna ... ... 10 to 13 per rupee. Katwa ... ... 13 per rupee. Raniganj ... ... 13 per rupee.
		Kalna	...	0·20	
		Katwa	...	0·43	
		Raniganj	...	0·20	
	2	Bankura	„ 18, '93	0·08	Weather—fair since 14th, and becoming hot. Lands are being ploughed for early sowings. Pressing of sugarcane continues. Fodder and water sufficient. Prices of common rice:— Srs. Sadar ... ... 11¼ per rupee. Vishnupur ... ... 11½ per rupee.
		Vishnupur	...	0·25	
	3	Birbhum	„ 18, '93	1·20	Weather—clear and getting hot. There was a good deal of hail in the Sadar on the 15th which has injured the standing *rabi* crops to some extent. Sugarcane is being pressed and ploughing going on. Rice sells at from 13 to 15 seers per rupee.
		Rampur Hát	...	0·24	
	4	Midnapore	„ 18, '93	0·28	Weather—very much warmer than last week. Ploughing going on everywhere. Prices of common rice:— Srs. Sadar ... ... 12½ per rupee. Contai ... ... 13 per rupee. Tamluk ... ... 12 to 14 per rupee. Garhbeta ... ... 12 per rupee.
	5	Hooghly	„ 18, '93	1·85	The hot weather has set in suddenly at the end of the week. Ploughing for next crop continues. A little sugarcane pressing is still reported to be going on. The late *rabi* is further injured by the rain. Cattle-disease continues but is less severe. Fodder and water plentiful. Prices of common rice:— Srs. Sadar ... ... 11 per rupee. Serampore ... ... 10 to 11½ per rupee. Jahanabad ... ... 11½ to 12¼ per rupee.
		Serampore	...	0·27	
		Jahanabad	...	0·35	
	6	Howrah	„ 18, '93	0·22	Hot weather suddenly set in on Friday (17th). Condition of cattle good. Fodder and water-supply sufficient. Price of rice 10 to 11½ seers per rupee.
		Ulubaria	...	0·30	
PRESIDENCY DIVN.	7	24-Parganas	„ 18, '93	0·30	Weather—seasonable. Ploughing going on. Sufficient fodder and drinking water. No cattle-disease. Prices of rice:— Srs. C. Sadar ... ... 10 to 14 8 per rupee. Barasat ... ... 10 5 per rupee. Barrackpore ... ... 11 0 per rupee. Dum-Dum ... ... 12 0 per rupee. Basirhat ... ... 11 7 per rupee. Diamond Harbour ... ... 13 0 per rupee.
	8	Nadia	„ 18, '93	0·20	Weather—hotter. *Rabi* harvest going on, and land being ploughed for *aus* paddy. Price of rice stationary. Fodder and water sufficient.
		Kushtia	...	0·16	
		Meherpur	...	0·14	
		Chuadanga	...	0·11	
		Ranaghat	...	0·41	
	9	Khulna	„ 18, '93	1·43	Weather—rainy in the early part of the week. Harvesting of *rabi* going on *Boro* promising. Coarse rice selling at from 11 to 14 seers per rupee Supply of fodder and water for cattle sufficient. No cattle-disease reported.
		Bagerhat	...	1·06	
		Satkhira	...	0·90	
	10	Jessore	„ 18, '93	0·44	Weather—days getting hot, but nights and mornings cool. Some injury has been caused to mustard, gram and peas by the rain. Ploughing continues. Planting of *boro* paddy going on in Narail. Some cases of cattle-disease reported. Fodder and water sufficient. Prices of rice stationary.
		Jhenida	...	0·17	
		Magura	...	0·11	
		Narail	...	0·70	
		Bangaon	...	1·36	
	11	Murshidabad	„ 18, '93	0·10	Weather—seasonable. Harvesting of *rabi* crops is going on. Sugarcane is being pressed. Mulberry and indigo promising. Transplantation of *boro* paddy nearly finished. Common rice sells at 12½ seers per rupee. Fodder and water sufficient for cattle.

Division	No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and State and prospects of the crops.
BENGAL—*concld.*				
CHITTAGONG DIVN.	12	Chittagong Mar. 18, '93	0·04	Weather—seasonable. Prospects of crops good. Rain wanted. Prices stationary. Condition of cattle generally good. Supply of fodder sufficient.
	13	Noakhali „ 18, '93	0·08	Weather—seasonable; cloudy at times. Ploughing for *aus* paddy vigorously going on. State of *rabi* crops favourable. No cattle-disease except in Begumganj. Fodder and water sufficient. Price of rice stationary.
	14	Tippera „ 18, '93	0·31	Weather—warm by day; unusually cool at night. Standing crops doing well. Ploughing operations proceeding. Mustard being gathered. Price of rice rising.
	15	Chittagong Hill Tracts. „ 17, '93	0·08	Weather—getting warmer daily. Condition of vegetables and other crops fair. *Jum* cutting and burning going on. Land for next rice crop being cultivated. No cattle-disease reported. Prices of common rice :— Srs. Rangamati ... ... 10 } Manicksury ... ... 18 } per rupee. Bandarban ... ... 9½ }
DACCA DIVN.	16	Dacca „ 18, '93	0·29	Weather—cloudy. Days hot and nights cool. Prospects of *rabi* crops good. Cultivation and sowing of *aman*, *aus* and *boro* paddy going on. Fodder available. No cattle-disease. Common rice selling at from 11 to 13 seers per rupee.
	17	Faridpur „ 18, '93	0·26	Weather—uncertain. *Rabi* still being harvested. Ploughing and sowing of rice and *til* going on vigorously. *Jali* and *boro* paddy doing well. Common rice sells at from 12 to 13 seers per rupee. Cattle get fodder and doing well.
	18	Backergunge „ 18, '93	Nil	Weather—seasonable. Prospects good. Ordinary rice selling at from 10 to 14 seers per rupee. Fodder and water sufficient.
		Bhola ...	0·14	
		Pirojpur ...	0 32	
		Patuakhali ..	1·20	
	19	Mymensingh „ 18, '93	0·73	Weather—cloudy. Prospects of standing crops favourable. Common rice selling at from 11½ to 14½ seers per rupee. Condition of cattle good. Fodder and water available.
RAJSHAHI DIVN.	20	Dinajpur „ 18 '93	0·07	Weather—occasionally cloudy with easterly wind. Lands being prepared for *bhadoi* and jute. Prices of rice both at Sadar and Thakurgaon stationary. The Subdivisional Officer reports that 35 head of cattle died of cattle-disease, which has now disappeared. Elsewhere the cattle are in good condition. Fodder and drinking water continue sufficient.
		Thakurgaon ...	0·49	
	21	Rajshahi „ 18, '93	0·44	Weather—little cold and cloudy. Ploughing for next crops still going on. Manufacture and export of ganja continue. Some cases of cattle-pox reported from the Munda thana. Supply of water and fodder sufficient. Price of rice stationary.
		Nator ...	1·50	
		Naugaon ...	0·07	
	22	Rangpur „ 18, '93	0·28	Weather—seasonable. *Aus* is being sown; lands under preparation for jute. Price of rice 12 to 15 seers per rupee.
		Kurigram ...	1·07	
		Nilphamari ...	0·17	
		Gaibanda ...	Nil	
		Ulipur ...	0·76	
	23	Bogra „ 18, '93	0·30	Weather—seasonable. Lands are being ploughed for rice and jute. Common rice sells at 12¾ seers per rupee. Fodder and water sufficient.
		Sherpur ...	0·34	
		Naukhila ...	0·02	
	24	Pabna „ 18, '93	0·56	Weather—unsettled and getting hot. Ploughing of land continues. Rice selling at 12¼ seers per rupee at Pabna and at Rs. 3 to Rs. 4-8 per maund at Sirajganj. Condition of cattle good. Water-supply and fodder sufficient.
	25	Darjeeling „ 18, '93	1·26	Weather—changeable. *In the hills :—Bhutta*, wheat, barley and potatoes progressing favourably. *Chota marua* coming up in some places. *In the Terai :*—Ploughing of land goes on. Barley ripening and tobacco in flower. Prices of coarse rice :— Srs. Hills ... ... 11 } Terai ... ... 13 } per rupee.
		Siliguri ...	0·31	
	26	Jalpaiguri „ 18, '93	1·26	Weather—getting hot in day, cold at night. Ploughing for *bhadoi* crops in progress. Harvesting of tobacco still going on. Hailstone has injured tobacco to some extent. Price of common rice stationary. Fodder and water-supply sufficient. No cattle-disease.

No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR.			
Bhagalpur Divn.			
27	Monghyr March 18, '93 Begusarai ... Jamui ...	0·05 0·09 Nil	Weather—getting warmer. Damage to *rabi* crop estimated to amount to 4 annas throughout the district. Late rain has done much good to indigo. Common rice sells at from 12 to 16 seers per rupee.
28	Bhagalpur „ 18, '93 Banka ... Madhipura ... Supaul ...	Nil Nil 0·25 0·11	Weather—growing hot during the day; cool mornings and evenings. Except for the damage done by the late rain, the outturn of the *rabi* would have been excellent: as it is there will be at least a 12-anna yield. Outturn of linseed estimated as follows:— Sadar ... ... 12 annas. Banka ... ... 10 „ Madhipura ... ... 12 „ Supaul ... ... 12 „
29	Purnea „ 18, '93 Kishanganj ... Araria ...	0·01 0·83 1·85	Weather—cloudy with a tendency to rain. Getting warm. *Rabi* prospects good. Harvesting of linseed and sugarcane in progress; that of tobacco retarded by rain. Rain has been injurious in the north to tobacco and mango blossoms. Indigo sowing in progress with favourable prospects. Cultivation for *bhadoi* extensive and forward. Fodder and water sufficient. Prices slightly rising.
30	Malda „ 18, '93 Shibganj ... Gajole ...	0·27 0·24 0·08	Weather—latter part of the week clear. Days getting warm; nights still cool. Lands are being prepared for *bhadoi* crops. Rice has been sown in some places in Khurba thana. *Rabi* crops promising well. Common rice selling at from 13½ to 16 seers per rupee. No want of fodder or drinking water.
31	Sonthal Parganas „ 18, '93 Deoghur ... Godda ... Jamtara ... Pakur ... Rajmahal ...	0·49 0·32 0·10 0·18 1·28 0·25	Slight rain. Towards the end of the week the weather has become hot and dry. The mango and *mahua* crops are now doing well, but suffered injury from the excessive rain. They are late. *Boro* rice being planted. Indigo sowing delayed. Price of rice still high. Fodder and water sufficient.
Patna Division.			
32	Patna „ 18, '93 Bihar ... Dinapore ... Barh ...	Nil 0·15 Nil 0·02	Weather—clear and becoming hot. *Rabi* crops on the whole good. Harvesting going on. Collection of opium during the week reported to have been very successful, the drug flowing freely, and the absence of west winds has enabled the capsules to stand a greater number of lancings than is usual, and thereby considerably increasing the outturn. Prices of common rice:— Srs. Sadar ... ... 16 } Bihar ... ... 16½ } per rupee. Dinapore ... ... 15 } Barh ... ... 11½ to 12 }
33	Gaya „ 18, '93 Nawada ... Aurangabad ...	0·19 0·09 0·18	Weather—cloudy and damp early in the week; clear and warm latterly. *Rabi* harvest progressing. Prospects improved by the clearing up of the weather. About three-fourths of opium collections done: yield and quality fairly good. Sugarcane planting begun. Common rice sells at 13½ seers per rupee. Water and fodder-supply sufficient.
34	Shahabad „ 18, '93 Buxar ... Sasaram ... Bhabhua ...	Nil 0·58 Nil 0·03	Weather—fine and clear; hot weather with light easterly winds. Great damage has been done in the Buxar subdivision within a limited tract by a hail-storm on the 11th. *Rabi* harvest is in full swing favoured by the fine weather; outturn all round will be about ¾ths of an average, should nothing unforeseen occur. Fodder and water abundant.
35	Darbhanga „ 18, '93	0·09	Weather—getting warm. Early part of the week cloudy. *Rabi* harvest commenced in places. Indigo sowings in progress. The rainfall of the week injured the mango blossoms to some extent. Poppy leaf manufacture closed. The drug flows pretty freely, but not as it would if the moisture was less. Condition of cattle good. Prices remain almost stationary.
36	Muzaffarpur „ 18, '93 Sitamarhi ... Hajipur ...	0·09 Nil Nil	Weather—somewhat unsettled. Standing crops continue to promise well. Opium flows pretty freely, but not as it would if the moisture was less. Manufacture of leaves closed. No cattle-disease. Fodder and water plentiful.

	No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR—*concld.*				
PATNA DIVISION—*concld.*	37	Saran Mar. 18, '93 Siwan .. Gopalganj ..	0·09 0·11 Nil	Weather—hotter by day, but not seasonably hot yet; and nights cool. Fine weather of the last few days has improved the *rabi* crops; the harvesting of some of them has commenced. Condition of poppy crop reported by the Sub-Deputy Opium Agents to be good. Fodder and water abundant. Prices of common rice:— Srs. c. Chapra ... ... 14 8 } Siwan ... ... 13 2 } per rupee. Gopalganj ... ... 13 6 }
	38	Champaran „ 18, '93	0·07	Weather—unsettled; sometimes cloudy with high wind and frequent showers. *Rabi* doing well. Oats and barley being cut in some places. *China* and *jasaria* paddy are being sown. Indigo sowing in progress. Opium collection making good progress, and the yield is plentiful in the Sadar. In Bettiah 8 annas drug collected, and prospects favourable for a good outturn. No marked change in prices. No cattle-disease. Fodder and water sufficient.
ORISSA.				
ORISSA DIVN.	39	Cuttack „ 18, '93	1·34	Weather—warm. Outturn of mustard estimated at 16 annas. Supply of fodder and water ample. Price of rice stationary.
	40	Puri „ 18, '93 Khurda ... Banpur ...	0·31 2·03 0·20	Weather—cloudy with drizzling rain at intervals. Lands are being cultivated for the next *sarad* crop. *Dalua* paddy growing well. Rain has damaged the *rabi* crops. Common rice sells at from 14 seers 10 chitaks to 18 seers 6 chitaks per rupee.
	41	Balasore „ 18, '93	0·60	Weather—seasonable. Ploughing continues. The average outturn of sugar is estimated at 15 annas. Prices stationary.
CHOTA NAGPUR.				
South-West Frontier Agency.				
CHOTA NAGPUR DIVN.	42	Hazaribagh Mar. 18, '93 Giridi ...	1·25 0·79	Weather—bright and getting hot. *Rabi* crops injured by excessive rainfall; estimated outturn 8 to 12 annas. Prospects of *mahua* and mango indifferent. Seventy-five per cent. of opium harvested. The ultimate yield is not expected to fall far short of the estimate. Common rice 12 to 14 seers per rupee. Fodder and water sufficient.
	43	Lohardaga „ 18, '93	0·74	Weather—getting hot. Ploughing continues. Common rice is selling at 14 seers per rupee. Fodder and water sufficient.
	44	Palamau „ 17, '93	0·69	Weather—seems now to have cleared. Some damage has been caused to the *rabi* crops, especially to gram, by the continuous rain. Hail reported from some parts. Mangoes are blooming very sparsely, and the *mahua* has been retarded by the cold rainy weather. These crops are expected to be short. Prices rising.
	45	Singhbhum „ 18, '93	0·38	Weather—bright and getting hot. *Rabi* crops fairly good. Gram and pulse suffered much from the late wet, but wheat and barley were benefited by it. Price of common rice varies from 12 to 16 seers per rupee.
	46	Manbhum „ 18, '93 Gobindpur ...	1·29 0·10	Weather—getting warmer daily. Warm bright weather has been wanted for some days past. Mango and *mahua* have been damaged, but to what extent not yet known. Price of rice 10 to 13 seers per rupee. Fodder and water-supply sufficient.

Published for general information.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF FEBRUARY 1893.

THE important features in the meteorology of February in Bengal and Assam have been :—

1. The mean pressure for the month has been in very distinct excess of the normal over the whole area, except perhaps at Darjeeling. The excess has usually equalled from 0·02″ to 0·04″, and it has been largest at the central and north-western stations, and smallest at the southern and eastern stations. At Sibsagar, Chittagong and Gopalpur, indeed pressure has been almost normal.

2. Temperature has been most abnormally low almost throughout the month, the general defect for the whole of Bengal equalling 4·1°, while in Assam it has equalled 2·7°. This defect has been most largely developed in the day or maximum temperatures, which at such stations as Berhampore, Burdwan, Krishnagarh, Naya Dumka, Purnea, Ranchi, etc., have been from 8° to 10° below the normal; while, on the other hand, at a few stations the night or minimum temperatures have been in slight excess of the normal.

3. Humidity has been in large excess of the normal at all except a few of the south-western stations, the variation in some cases exceeding 20 per cent. Cloud proportion for the month has also been very largely in excess of the normal, the amount of cloud in many cases being about twice as great as is usual in February.

4. Winds have been north-westerly and northerly for the greater part of the month, and have hence been rather unusual, for during February southerly winds usually commence at the southern stations, but this has not been the case in the present year.

5. Weather has been of a most unusual character from the large number of barometric depressions and disturbances which have advanced from North-Western India through the province and which have also been of a very influential character. Thus one depression appeared in North-Western India on February 4th, and passed through Bengal from the 7th to the 9th, giving very unsettled weather. Another storm or disturbance advanced from North-Western India on the 12th, reaching and affecting Bengal from the 13th to the 15th. Another depression advanced from Central India on the 16th, and affected Bengal from the 17th to the 20th, and a fourth disturbance coming from North-Western India on the 21st, caused disturbed weather and rain in Bengal from the 23rd to the 25th. Hence for a large part of the month weather was quite unusual with rather heavily-clouded skies and rain, and indeed almost the reverse of the ordinary north-east monsoon weather.

6. Owing to the large number and influential nature of the disturbances which have affected the province, rainfall in February has been very abundant, the falls averaging nearly five inches in South-West Bengal, about four inches in Chota Nagpur, about three inches in Orissa, East Bengal and South Bihar, about two inches in North Bengal, and an inch and-a-half in North Bihar. These amounts generally equal from three to six times as much as usual. The number of rainy days in February has also generally been about four times as great as in ordinary years.

Meteorology of the month.—The month of January in Bengal had been decidedly more disturbed than usual, and there had been no less than five periods of disturbed weather, owing to the passage of barometric depressions from North-Western India either towards or through Bengal. One of these depressions had passed through the province at the close of the month and had disappeared from about January the 30th, and from the 1st of February weather was again fine and settled in Bengal, and the usual cold wave had established itself in the rear of the depression. Thus from the commencement of the month the cold weather conditions were strongly established in Bengal, and these continued up till the 6th or 7th instant without material change. A barometric depression had, however, entered North-Western India on the 4th, and a secondary depression was developed over the North-West Himalayas, and both of these advanced steadily in an easterly direction towards Bengal. On the 7th the two depressions had apparently joined together, and a large shallow depression covered Bengal and the neighbouring parts of the Central Provinces, when the ordinary cold season conditions were reversed, the sky became overcast, temperature was in excess of the normal by from 1° to 4°, and rain became general over Bihar, North Bengal, Chota Nagpur, and South-West Bengal. On the 8th the depression had passed over the Bay, and was some little distance to the south of the Sundarbans, and hence weather over Bengal continued very disturbed, and general rain was reported over the whole province. On the 9th the depression had either passed on in an easterly direction over Burma, or had perhaps filled up: the wave of cold air following in the rear of the depression flowed over Bengal, and winds became northerly and north-westerly. Hence from the 10th instant the sky became cloudless and rainfall ceased. Temperature on the 10th became from 3° to 6° below the normal, while humidity was also low, and hence the cold season conditions again became strongly pronounced.

From this date up till the 13th, the meteorological changes of Bengal were again of little importance, but on the 12th another barometric depression appeared over North-Western and Western India, which travelled rapidly in an easterly direction, and on

the 13th a shallow low pressure area existed over the Central Provinces and the west of Bengal, while a secondary depression had appeared over the Punjab. Conditions on the 13th, therefore, again changed in Bengal, temperature rose in front of the depression by 3° and 4,° the skies clouded over and rain commenced in the west and south of the province. On the 14th the depression had reached Orissa and the north-west of the Bay, where it was accompanied by a distinct cyclonic circulation of winds, and fairly general rain set in over almost the whole province. On the 15th the depression had apparently filled up or passed away in an easterly direction, and fine cool weather with little or no rain again set in for a day or two. On the 16th. however, another shallow depression had formed over the central parts of India, and moving in an easterly or south-easterly direction it rather largely affected Bengal on the 17th instant, when it again produced fairly general rain in Bihar and North Bengal. On the 18th the low pressure area had again moved in an easterly and south-easterly direction, and was affecting the south-eastern parts of Bengal and Orissa, and fairly general rain was received in South-West, East and North Bengal and Chota Nagpur. On the 19th the depression continued to affect the weather in Bengal, but on the 20th it had apparently passed over the Bay, and from the 19th to the 20th weather was very disturbed in Bengal, and rain had again fallen at many stations, in several cases accompanied by local storms and sometimes with hail. On the 21st the area of low pressure in the Bay had disappeared, and weather again became fine in Bengal, the sky cleared, and temperature fell, while rainfall almost ceased. On this date, however, a fresh barometric depression entered North-Western India, advancing in an easterly direction, and on the 22nd one barometric depression was over the Central Provinces, while a second large depression existed over the Punjab. On the 23rd the depression from the Central Provinces had reached Orissa, that in the Punjab had passed into the Himalayas, and a new depression had advanced from the westward into North-Western India. Hence again conditions became very disturbed in Bengal, and on the 23rd heavy rain was reported at many stations. The depression was still over Orissa on the 24th, but on the 25th it began to move away in a south-easterly direction, and on the 26th it had apparently passed away into the Bay and had ceased to affect Bengal. Hence again from the 23rd to the 25th conditions continued in a very disturbed state, and fairly general rain was received up to the 26th. In the rear of the depression, as usual, a wave of very cool air advanced over the province from the 26th, the sky cleared rapidly, and rainfall ceased, while a steady dry north westerly wind set in, which continued up to the close of the month, giving again very strongly pronounced cold weather conditions, which indeed were so marked that for the 24 hours from the 27th to the 28th of February, the mean temperature of the greater part of the province was from 10° to 12° below the normal.

Pressure.—At the beginning of the month the general pressure was nearly normal, and this continued to be the case up till about the 18th. For the week ending the 25th, however, the mean pressure had become very distinctly in excess of the normal, the excess equalling nearly 0·04". For the last few days of the month, however, pressure became in rather large excess of the normal, the excess equalling from a tenth to nearly a sixth of an inch. Hence the mean pressure for the month has been very distinctly in excess of the normal, the excess usually ranging from 0·02" to 0·04." Comparatively small excess pressures are shown in Orissa, South-East Bengal and Assam, and at Gopalpur, False Point, Chittagong, and Sibsagar the excess is not more than a hundredth of an inch. On the other hand, stations like Krishnagarh, Rampur Boalia, Bhagalpur, Arrah, and Chapra report excess pressures between 0·04" and 0·05".

Temperature.—The mean temperature of the province for the first week in February was 3·3° below the normal. The defect for the second week was also large, and equalled 2·8,° while in the third week it only averaged 1·8°. From this time till the end of the month the variation rapidly increased and became more than 4° in defect, and on the last day of the month the general temperature was about 10° to 11° below the normal of the day. Hence the mean temperature for the whole month has been largely in defect, and for the whole province the mean shows a temperature 4·1° lower than usual, while in South-West Bengal and Chota Nagpur the defects have averaged between 5° and 6°.

The following table shows generally the variation of the mean temperature from the normal, week by week, at nine typical stations in different divisions of the province, and from it the unusually large defect in the day or maximum temperatures will be seen, for in the week ending the 25th the day temperatures at most stations averaged about 10° below the normal:—

Stations.	Week ending 4th February 1893.			Week ending 11th February 1893.			Week ending 18th February 1893.			Week ending 25th February 1893.

Rainfall.—The largest falls have been in South-West Bengal, which has received an average amount of about fivo inches, or nearly five times the normal fall for the month. In Chota Nagpur the fall has equalled about six inches, or six times as much as the normal. In East Bengal an average amount of three inches has been recorded, or about thr e times as much as usual. Orissa has also received nearly three inches, or three times as much as in normal years. South Bihar has received between two and-a-half and three inches, or again six times as large a fall as usual; while North Bengal has received a little more than two inches, or about four times as much as in normal years. The smallest fall of all has been in North Bihar with about an inch and-a-half, or rather less than four times the ordinary fall. The number of rainy days in February was also exceedingly large, and averaged between five and six days over the whole province, while the normal amount is one or two days only.

Notwithstanding the general abundance of the rainfall in February, the falls in the extreme south-east corner of the province have been scanty, and the fails in the Chittagong district have only averaged about half an inch, and have been less than the normal amount. Comparatively small falls were also received in Rangpurand Kuch Bihar.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the month of February 1893 :—

Meteorological Divisions.	Temperature.						Rainfall.							
	Highest observed during month.	Lowest observed during month.	Averages for month.			Average mean of month above or below normal mean of month.	Of month.			Rainy days.			Since 16th Oct. 1892.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h, 10h, 16h and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; p, passing temporary showers; t, thunder; <, lightning; ▲, dew; ≡, fog.

* Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period. The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 01. rainfall: the normal mean are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station district, *i.e.* the total rainfall at the subdivisional stations in the district sending in returns divided by the number of stations. A rainy day is one or

for the week ending Saturday, the 18th of March 1893.

Explanation.— .. indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the* 21st *March* 1893.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 18TH OF MARCH 1893.

TOWARDS the close of the previous week a rapid fall of pressure was occurring over Bengal, and the unusually high pressure which had existed for some little time previously was gradually disappearing; but even on the 11th, or the last day of the week, pressure was still in excess by a tenth to a seventh of an inch. On the 12th pressure had fallen over the whole province, the fall being brisk over the western half, but pressure was still usually in excess by considerable amounts, though the distribution was a little irregular. Winds also were irregular in direction, for north-westerly winds were blowing at some of the western stations, north-easterly winds in the centre of the province, while at the western stations the directions were so irregular that at neighbouring stations winds were frequently of opposite direction. Hence weather conditions were rather disturbed, and from the 12th to the 13th numerous rain showers occurred over the greater part of the province except in Bihar. On the 13th pressure had again fallen slowly over the whole province, so that it was still in excess of the normal, but again winds over the whole province were decidedly irregular, and the disturbed conditions made themselves felt in the numerous showers which occurred between the 13th and 14th, for on the morning of the 14th almost all stations in Orissa, South-West Bengal, North and East Bengal and Chota Nagpur reported rain. On the 14th also a further slow fall of pressure had taken place, and pressure became relatively low over a considerable part of Bengal. This was followed by a further fal on the 15th and 16th, when pressure became below the normal of the day at the western and southern stations, though it was still in excess over the remainder of the province. A rather brisk fall of the barometer again occurred on the 17th, which brought pressure below the normal by amounts ranging up to about a tenth of an inch in the west of the province, and also made the pressure decidedly lower in Bihar and Chota Nagpur than over the eastern half of the province. On the 18th again a moderate to rapid fall of pressure occurred, and pressure became below the normal of the day by amounts ranging up to 0·16" at Dehri, while in the east of the province the defect only equalled about half this amount, and the actual pressures varied from 29·71" at Ranchi and Dehri to 29·83" at Chittagong. This distribution of pressure which obtained on the 18th instant, it will be seen, is that which characterises the hot season in Bengal. During these rather rapid changes in the distribution of pressure in Bengal conditions remained somewhat disturbed, and a few local showers occurred on almost all days up till the close of the week.

The main feature in the meteorological changes of the week has been the practical reversal of the pressure conditions which had previously obtained. At the end of the previous week and beginning of the week under review the pressure distribution was almost that of the cold weather, while at its close it was practically that of the hot season. Accompanying this change of conditions also there has been a steady increase in the temperature, and while on the first day of the week the mean temperature was from 6° to 8° and 9° below the normal, and while the defect continued large for the first five days, on the 18th, or the last day of the week, the general defect had been reduced to about 2° or 3°. The changes therefore of both pressure and temperature during the week have been large and important.

Pressure—Has been falling throughout the week, and was at its close rather largely in defect, but nevertheless the mean pressure for the whole period has been in excess at twenty-nine and in defect at eleven stations. As a rule the variations are not larger than from one to three-hundredths of an inch, and usually the defects are shown at the extreme western stations of the province, while the largest excess pressures are recorded at the north-eastern stations. The variations, however, at neighbouring stations are somewhat irregular

Temperature.—The changes of temperature during the week have been already alluded to. The mean for the period has again been largely below the normal value, and the defect equals no less than 5·4°. This defect has been largest at the western and south-western stations, and in the divisions of Chota Nagpur, South-West Bengal and Orissa it averages nearly 7°.

The distribution of temperature during the week and its variation from the normal value are best seen in the table below, where the average maximum, minimum and mean temperatures for the week at nine typical stations in different districts of the province are compared with the normal values for the period. The defect during the week again, it will be seen, has been most largely marked in the day or maximum temperatures, which at the majority of the stations given have been about 10° below the normal of the week:—

Rainfall—Has also been fairly frequent during the week, though the falls have usually not been heavy. Average falls of from three-quarters to one inch have occurred in Chota Nagpur and Orissa, and of about half to three-quarters of an inch in East, South-West and North Bengal. In Bihar, however, the falls have only averaged about a fifth of an inch. In all divisions except East Bengal the falls have been in considerable excess of the normal for the period. Indeed in Chota Nagpur the fall is seven times as much as usual, and in Orissa nearly four times as much, but in the other divisions the excess is not so large.

Table showing the excess or defect of the actual mean temperature from the normal for the week ending 18th March 1893.

	Normal mean maximum temperature for the week ending 18th March.	Actual mean maximum temperature for the week ending 18th March 1893.	Variation of actual mean from the normal.	Normal mean minimum temperature for the week ending 17th March.	Actual mean minimum temperature for the week ending 18th March 1893.	Variation of actual mean from the normal.	Normal mean daily temperature for the week ending 18th March.	Actual mean daily temperature for the week ending 18th March 1893.	Variation of actual mean from the normal.

TRIAL BY JURY IN BENGAL.

NOTIFICATION.

THE following papers are published for general information.

By order of the Lieutenant-Governor of Bengal,

H. J. S. COTTON,
Chief Secretary to the Govt. of Bengal.

The 28*th March* 1893.

Report of the Commission appointed to consider and report on certain questions connected with trial by jury in Bengal.

We, the undersigned, have been appointed by the Government of India by a Resolution, dated the 23rd February, 1893, as Commissioners,

(1) to consider the classes of offences triable by jury in the several districts of Bengal in which the system of trial by jury has been introduced, and to report whether any, and, if so, what changes in the classification which now obtains are desirable;

(2) to consider and report whether any, and, if so, what modifications of the provisions of the Criminal Procedure Code relating to the trial of offences triable by jury before Courts of Session are desirable for the purpose of preventing miscarriage of justice.

2. We have read and considered the papers mentioned in the Resolution as well as papers placed at our disposal by the Government of Bengal and obtained from the High Court. These are specified in a Schedule attached to this Report. We have anxiously considered whether we should be materially assisted by the examination of witnesses, but, having regard to the ample information furnished by the large mass of official papers and statistics before us, supplemented by our own experience and knowledge of the subject, we have felt that the taking of oral evidence would not adequately compensate for the delay that it would necessarily entail.

3. Before proceeding to report the conclusions at which we have arrived, it is desirable that we should state briefly the origin and history of trial by jury in the Criminal Courts of Bengal outside the Presidency town of Calcutta, so as to show more clearly the grounds upon which our opinions have been formed.

i. Until the 1st of January 1862, when the Code of Criminal Procedure (Act XXV) of 1861 and the Indian Penal Code (Act XLV of 1860) came into operation, there was no regularly defined procedure in those Courts and the law administered, except where specially defined in regard to certain offences, was involved in some uncertainty.

ii. In 1793, Regulation IX was passed establishing certain Criminal Courts in Bengal under certain rules. Trials before the Courts of Session were held by an European Judge associated with a Mahomedan law officer, whose duty it was at the conclusion of the trial to deliver his *futwa* or exposition of the Mahomedan law applicable to the case. The law administered under the Mahomedan Criminal Code was modified from time to time in regard to certain offences by successive Regulations passed under the authority of Government to supply defects found to exist therein.

iii. Regulation VI of 1832 for the first time left it to the option of a Sessions Judge to dispense with the *futwa* of the Mahomedan law officer, and enabled a person under trial, who did not profess the Mahomedan faith, to claim exemption from trial under the Mahomedan Criminal Code, and in such a case the trial was to be held without the *futwa* of the law officer, and under one of three procedures described by that Regulation:

(*a*) The Sessions Judge might refer the case, or any point or points in it, to a Punchayet of respectable natives, who were empowered to carry on their inquiries "apart from the Court" and report to it the result, or

(*b*) The Sessions Judge might constitute two or more such persons assessors or members of the Court. These persons were required to give their opinions separately for discussion, and if any of the assessors or the Sessions Judge so desired it, the opinions of the assessors were to be recorded in writing on the proceedings, or

(*c*) The Sessions Judge might employ such persons "more nearly as a jury." It was left to the discretion of the presiding Judge to select the jurors, and to

fix the number to be employed, and the manner in which their verdict was to be delivered. After consultation, a verdict was to be delivered; but it was provided that, in all cases, the decision was vested exclusively in the presiding Judge.

If the *futwa* of the law officer was, in a trial so held, dispensed with, and the crime of which the prisoner was convicted was one not specially provided for by the Regulations, the Sessions Judge was not competent to pass sentence, but was directed to refer the case for the consideration of the Nizamut Adawlut. Trial by jury, therefore, under this Regulation, was a very different matter from what the use of that term would ordinarily imply, and we may add that this mode of trial was very seldom adopted.

iv. In 1859, on the Report of the Indian Law Commissioners, the Bill to introduce a Code of Criminal Procedure came before the Legislative Council of India. The Report of the Select Committee was considered by the Secretary of State for India in Council who, on the 31st December 1859, communicated the following despatch on the subject of the introduction of trial by jury in the form and to the extent proposed in the Report of the Select Committee:—

"4. The Law Commissioners appointed under the Indian Act of 1853, proposed to retain the mode of trial by jury in the Presidency towns, and in the case of British subjects in the mofussil; to extend it to certain other classes in the mofussil who have not hitherto enjoyed it; and to leave it to the discretion of the Government to extend it to such other places out of the Presidency town as it may think fit. All other trials before the Sessions Courts were to be conducted with the aid of two or more assessors as members of the Court.

"5. In jury-trials the verdict of the jury was to be binding on the Court. In trials with the aid of assessors the decision was to be vested exclusively in the Judge.

"6. The course proposed by the Commissioners appears to Her Majesty's Government to have been a very safe and judicious one. Under a system intended to be ultimately adapted to the whole of India, including the Presidency towns, it was necessary to secure the binding nature of the verdict of a jury as to matters of fact. This was done, and the trial by jury was to be at once extended as far as it appeared to the Commission it could be safely done by a mere act of the legislature. Beyond this it was proposed to associate natives of the country as assessors with the Judge, in conducting criminal trials, and thus to prepare them for taking hereafter a more decided and efficient part in the administration of criminal justice than they now appear to be prepared for; and in such cases, the decision was to be left with the Judge in order to provide against failures of justice arising out of religious or other prejudices.

"7. The Code as prepared by the Commissioners was laid before the Legislative Council and referred to a Select Committee who struck out the provision respecting assessors thus providing for a general system of trial by jury.

"8. The members of the Select Committee, however, appear to have had their misgivings on this subject; and they accordingly inserted a clause to the effect that the Sudder Court should have the power of over-ruling the verdict of a jury because, said Mr. Harrington in the Legislative Council, 'there was a difficulty in making any other provision without giving a power to native jurors, with which, for the present at least, it was thought that they could not be safely entrusted.'

"9. The clause proposed by the Select Committee was struck out by the Council, and the Bill as now approved by them places the whole of the territories in India, in which the Codes of Bengal, Madras and Bombay, prevail, under a system of trial by jury, the unanimous verdict of the jury being final and conclusive in questions of fact.

"10. Her Majesty's Government are of opinion that the course recommended by the Law Commissioners should be followed, that trials in the Sessions Courts should be generally conducted with the aid of assessors, and that trial by jury being settled by law in regard to

certain classes it should be left to the Government to extend it to localities as it may deem fit. Whatever objections there may be to such a course they appear to Her Majesty's Government to be far less than those which exist to the introduction of a general system of criminal administration for which the country is not prepared."

The Legislative Council accordingly modified their recommendations, and the Bill which became Act XXV of 1861, was passed, and came into operation on the 1st January, 1862. Under Section 322, the Local Government was empowered to order that the trial of all offences, or of any particular class of offences, by any Court of Session should be by jury in any district, and from time to time to revoke or alter such order. It was also empowered to direct that the jury in such trials should consist of five persons or of such number, being an uneven number, and not being less than five or more than nine, as it might direct in respect of any particular district or of any particular class of offences in that district. Accordingly the Government of Bengal fixed seven as the number of all juries in such trials, and also in the course of 1862 directed that trials should be held by jury in the Sessions Courts of the Districts of 24-Pergunnahs, Hooghly, Burdwan, Moorshedabad, Nuddea, Patna and Dacca in respect of offences under the following Chapters of the Indian Penal Code:—Chapter VIII (*Offences against the Public Tranquillity*); Chapter XI (*False Evidence and Offences against Public Justice*); Chapter XVI (*Offences affecting the Human Body*); Chapter XVII (*Offences against Property*); Chapter XVIII (*Offences relating to Documents and to Trade or Property Marks*); and also abetments of, or attempts to commit, any of those offences. Under Section 328, in order to constitute a legal verdict, the jurors were to be unanimous, or, if the jury consisted of five persons, a majority of four, if of seven, a majority of five, if of nine, a majority of six was necessary. In the event of a majority of a smaller number, the jury was to be discharged and a new trial was to take place, and if, on such new trial, a verdict by a legal majority was not obtained, the accused person was to be acquitted (Section 351). The verdict of the jury was final, except on a point of law, that is, on misdirection established on the part of the Sessions Judge.

v. The Code of Criminal Procedure came under revision by the Legislative Council in 1870, and, in introducing the Bill, the Hon'ble Mr. (now Sir) J. F. Stephen, on the 9th December, 1870, made the following observations:—

"The third and last alteration was with regard to trial by juries, the provisions regarding which appeared to be complicated. There were certain specified majorities which might convict a man of an offence; if a smaller majority wished to convict, the prisoner might be tried again. The Indian Law Commissioners observed that this was an extremely intricate way of proceeding, and that the concurrence of the Judge was a far better guarantee of the justness of the conviction than any specified majority of jurors; and the Bill was altered accordingly thus:—that if not less than two-thirds of the jury convicted a man, and if the Judge agreed with them, the accused was to be convicted; if there was not such a majority, or if the Judge did not agree with them, the accused would be acquitted."

Mr. Stephen then proceeded to state that according to his views trial by jury *primâ facie* was an institution unsuited to such a country as India, and he asked for information as to its working since 1862.

The reports of the local authorities consulted expressed a good deal of dissatisfaction with trial by jury in the seven districts of Bengal. The Select

Committee of the Legislative Council, on consideration of those reports, in their preliminary report on the Bill thus dealt with the subject:—

Resolution III.—"We think that if the jury system in the Mofussil is to be maintained, the Judge should, in cases in which he differs from the jury, have power to refer the case to the High Court, and that the High Court should be empowered to pass final order in the case."

On the 30th January, 1872, the Honourable Mr. Stephen, in presenting the preliminary report, made the following observations:—

"The third Resolution had reference to a question which was referred to the Local Governments when this Bill was introduced; it was a question connected with the jury system in the mofussil. The jury system, as the Council were aware, was introduced by the Criminal Procedure Code passed in 1861. It was then felt to be an experiment, because the whole system of trial by jury implied the existence of a state of things which was peculiar to a community of Englishmen, or a people with English ideas, and if it did succeed, it would succeed in spite of difficulties peculiar to India. The committee had considerable doubts as to the course which ought to be taken in regard to the jury system in the mofussil, and whether it ought to be maintained at all. There was, however, one point upon which they felt clear. They thought that the Judge, in cases in which he differed from the jury, should have power to refer the case to the High Court, and that the High Court should be empowered to pass final orders. In trials by jury, a degree of finality attached to the verdict which attached to the decisions of no other tribunal in the country, and which was entirely opposed to the general spirit of the administration of justice in India. If a man was convicted before a Sessions Judge, he had an appeal to the High Court where they discussed the whole matter, and if they thought justice had not been done, they would reverse the decision. In England this could not be done, and the effect was that an irregular appeal to the Home Secretary was in practice allowed, by which the ends of justice were often defeated. Here if a jury convicted, their verdict was absolutely final; and the only remedy available when a man was unjustly convicted in that way was a petition to the Local Government or to the Governor General in Council, as the case might be, for the exercise of the prerogative of mercy. That was a power to which Mr. Stephen thought there was the very strongest possible objection, the administration of the law was one thing, and the exceptional setting aside of the law was quite a different thing. He admitted that there might be exceptional cases where, owing to peculiar circumstances, it would be proper for the Government to interfere to mitigate sentences which the Judge was bound to pass. But it appeared to Mr. Stephen altogether improper that a man should be permitted to say, 'the Judge thinks I am guilty, but I tell you that I am innocent.' Substantially that was an appeal; but it was an appeal to a person who ought not to accept the appeal; such questions ought to be left to the judicial authorities. The information before the Committee upon this subject, and the experience of the members of the Committee, led strongly to the conclusion that failures of justice resulted from this circumstance."

A further report was made by the Select Committee on this subject:—

Paragraph 9.—"As to Resolution III, we do not recommend the abolition of the jury system, but we think that the opinion of a majority of the jurors with the concurrence of the Judge should decide the case, and that, if a Judge differs from the verdict of the majority of the jury, he should have power to refer the case to the High Court, which may pass such order thereon as it thinks fit."

vi. On the 16th April, 1872, the Hon'ble Mr. Stephen, in presenting this report, accepted the suggestions of the Select Committee and made the following observations:—

"I am aware that some of my honourable colleagues think that we have changed the spirit of the whole system so much by these alterations, that it would have been better to sweep it away altogether. I cannot myself think so. I certainly should not have suggested the introduction of the jury system into India, if I had not found it here, and I cannot say that the opinions given of it by those who have had experience of its working are at all favourable: They were not, however, so altogether unfavourable as to induce us to take the step of recommending its total abolition. In giving the Judge power to refer to the High Court cases in which he differs from the jury, we have no doubt made a considerable alteration upon English precedents. But the alteration, if adopted, will be entirely in harmony with the whole spirit of Indian criminal procedure, the very essence of which is control and

supervision by one set of Courts over another. We do not, of course, mean that the Judge should act in this manner in every case in which he has doubts as to the propriety of a verdict, or even in those cases in which he feels that, if he had been a juror, he would not have returned the same verdict. Our intention is, that he should exercise the power in question in those cases only in which it is necessary to do so in order to prevent a manifest failure of justice, and having regard to the strong motive which the Judge always has for avoiding all future trouble by accepting the view taken by a jury, I think there is little reason to fear that the power will be abused."

And the Lieutenant-Governor of Bengal, Sir George Campbell, said :—

" Another subject to which he would draw the attention of the Council was the difficult subject of juries. It was His Honor's opinion that, in this country, juries framed on an English model were not altogether beneficial instruments in the administration of criminal justice; at the same time he had not been willing to abandon the jury system altogether, because, although he did not think that trial by jury was an unmixed good, he believed that the system had a great effect on the political education of the people. It was a very great object to induce the natives of the country to take a part in self-government and in the administration of justice, and it was in that respect only that he regarded the maintenance of the jury system in criminal trials to be of some value."

vii. The Code of 1872 modified that of 1861 in respect of the finality of the verdict of a jury. Section 263 declared that—

" If the Sessions Court does not think it necessary to dissent from the verdict of a majority of the jurors, it shall give judgment accordingly . . . . If the Court disagrees with the verdict of the jurors and considers it necessary for the ends of justice to do so, it may submit the case to the High Court, and may either remand the prisoner to custody, or admit him to bail. The High Court shall deal with the case so submitted as with an appeal, but it may convict the accused person on the facts, and if it does so, shall pass such sentence as might have been passed by the Court of Session."

viii. (An unimportant alteration in expression amounting to more accurate drafting was made in 1874, together with some other amendments in the Code which we need only mention in passing to the real matters in issue.)

ix. It will be observed that, while the Legislature enabled the Sessions Judge to suspend the verdict of a jury by submitting the case for the orders of the High Court, it permitted a verdict by a bare majority of the jurors, that is, by a majority of one juror. The Legislature apparently considered that if the Sessions Judge did not so disagree from the jurors, it was not necessary to have the absolute majority provided for by the Code of 1861. The orders of Government regarding the offences triable by jury, and the districts in which such trials were to be held, remained unaltered. The number of the jurors was in 1873, with the concurrence of the High Court, reduced from seven to five.

x. The Code of Criminal Procedure came again under discussion before the Legislative Council in 1881, and the system of trial by jury again became the subject of many reports, which were duly considered by that Council. But still, though those reports were not altogether favourable, no alteration was made in the Code of 1872 with the exception of a slight alteration of Section 263. Instead of the words quoted above, the corresponding Section (307) of the Code of 1882 provided—

" If in any such case the Sessions Judge disagrees with the verdict of the jurors or of a majority of the jurors, on all or any of the charges on which the accused has been tried, so completely that he considers it necessary for the ends of justice to submit the case to the High Court, he shall submit the case accordingly, recording the grounds of his opinion, and, when the verdict is one of acquittal, stating the offence which he considers to have been committed."

It was further provided that,

" in dealing with the case so submitted the High Court may exercise any of the powers which it may exercise on an appeal, but it may acquit or convict the accused of any of the

offences of which the jury could have convicted him upon the charge framed and placed before it, and if it convicts him, may pass such sentence as might have been passed by the Court of Session."

xi. On 17th July 1884, the Government of Bengal asked the opinion of the High Court whether it was desirable to introduce trial by jury into certain other districts mentioned. After stating that the seven districts had been selected by the late Sudder Court on the ground that the intelligence of the residents was higher than that of the residents of other districts, and that the means of education existing in them, or in their immediate vicinity, would enable the better class to qualify themselves thoroughly to take part in the administration of justice, the letter from Government of Bengal proceeded in these terms :—

"3. The reports submitted by District Magistrates and Commissioners of Divisions on the working of the system during the first years of its introduction were not favourable. The Commissioner of Dacca stated that he had no confidence in the jury system so far as that division was concerned, and he was of opinion that justice would be defeated in the more important trials by its application to them, though it might work well in unimportant cases, where the parties were poor and insignificant. The Commissioner of the Presidency Division thought the country was not sufficiently advanced for the introduction of the system, as in his opinion, even the higher classes of the people, with the exception perhaps of those residing in the immediate vicinity of the metropolis, were unfit for the duty of jurors, not so much by reason of their education as on account of their peculiar religious tenets, and their more cherished feelings and prejudices; and where these objections did not exist, there was another not less important, *viz.*, their ignorance of the first principles of the law of evidence. The Commissioner proposed that Judges should be vested with the power of selection and rejection, not of persons, but of classes, so that where there was reason to believe that a Brahmin might be, on religious grounds, acquitted solely through the religious scruples of Hindus, or a failure of justice might be apprehended from the existence of party feeling, the Judge might form a mixed jury of Mahomedans, Hindoos, and Eurasians or Europeans, so that no one religion or class should largely predominate. He considered that if this were done, and if greater care were taken in testing the qualifications of the persons selected to serve as jurors, and a clear summing up of the facts of the case were laid before the jury, the chief evils complained of would be remedied. The Commissioner of Burdwan, while prepared to see failures of justice in places where an unusual question arose or difference existed, was of opinion that the system was one of good promise, but that it ought to be gradually and discreetly introduced. The Commissioner of Patna concurred with the Magistrate of Patna in thinking that the natives of India were not, as a body, sufficiently enlightened, either morally or intellectually, to hold the important position of jurors, and he observed that the sooner trial by jury was abolished, in Patna at least, the better it would be for the administration of justice.

4. The reports of the Sessions Judges of the 24-Pergunnahs and Nuddea, copies of which were forwarded with the High Court's letter No. 3325, dated the 29th November, 1864, were more favourable to the system.

The Judge of Nuddea expressed his decided opinion that it had worked well, although there were a few cases in which the verdict of the jury had been directly against the evidence adduced. From his actual experience of the trials in his court, he was satisfied that the presence of a jury in criminal cases had been of essential assistance to himself, and was regarded by the natives themselves as a safeguard against errors of judgment and a guarantee that all the details in a case would be fully understood before any conclusion was formed; and he observed—"Whatever confidence a native may have in the strict and unswerving impartiality of the European Judge, I am not so satisfied that he ever places the same reliance in his power to comprehend all the intricate details which are involved in a difficult case where only natives are concerned, and it is just in these cases, specially where questions of caste, and questions involving family disputes, and native social life and manners, are constantly arising, that a jury taken from the body of the community and intimately acquainted with the ordinary transactions of native life are in the best position for giving most material assistance to the Court." The Judge of Nuddea therefore felt sure that the abolition of trial by jury would be a retrograde measure; and he added, "Every year I hope to see an improvement of what, in its present stage, can only be regarded as an experiment; and while no institution could be better devised for leading the people to think and act more independently for themselves, to rely less upon the opinions and assistance of others, and to trust more to their own

energies and exertions, we shall find that the diffusion of the knowledge of the laws, in the practical administration of which they take so responsible a part, will produce a more intelligent attachment on the part of the natives to the Government under which they live."

The Judge of the 24-Pergunnahs considered the jury system to be unsuitable to the existing state of affairs, but he did not think it advisable to abolish it after so short a trial. He was in favour rather of retaining the system and of endeavouring to improve it by amending the jury list. He proposed having on every trial a mixed jury of Europeans and Eurasians with natives, and that the jury should be composed of 5 instead of 7 members.

The Hon'ble Judges of the High Court were of opinion that a certain measure of success had attended the introduction of the system, notwithstanding a few instances in which verdicts had been given palpably against the weight of the evidence, and from which, in consequence, a failure of justice had resulted. While, however, expressing generally their opinion that the system had not proved unsuccessful, the majority of the Hon'ble Judges were not prepared to advise its extension to other districts, or to crimes other than those specified in the chapters of the Penal Code to which it had been applied. They were of opinion that looking to the increased facilities of travelling both by land and water, the radius from within which jurors were drawn might be properly and advantageously extended to 15 or 20 miles instead of 10 miles, the distance from the court-house to which it was restricted, and that a reduction in the number of the jury from 7 to 5 would conduce not only to the convenience of the persons liable to serve as jurors, inasmuch as their services would be less frequently required, but also to the improvement of the system itself by the concentration of responsibility in a smaller number.

5. On a review of the reports summarised above, the Lieutenant-Governor (Sir Cecil Beadon) came to the conclusion that although there had been a few cases in which a failure of justice had resulted from the perversity, prejudice, or want of intelligence of the jury, yet the experiment had succeeded to an extent which was scarcely to be anticipated, and that, on the whole, the jurymen had discharged their duties intelligently and conscientiously. Sir Cecil Beadon was of opinion that in the face of the testimony to the beneficial working of the system in Nuddea borne by the Sessions Judge, who had evidently given the subject very serious thought, there was not sufficient ground for suspending trial by jury in that district, as had been proposed, and that, to abolish or suspend it in any district into which it had been introduced in respect to any particular class of offences to which it had been made applicable, wouldbe open to very serious objection. At the same time, there appeared to him to be sufficient grounds for not introducing the system into other districts until it had been tested for a longer period in the districts in which it was then in force. With a view to the improvement of the system, the radius of the area of selection was extended to 20 miles in the case of Krishnaghur, Patna, and Burdwan, and to 15 miles in the case of the sudder stations of the other jury districts, and the Commissioners were asked to have the jury lists carefully revised by Collectors and to see that the duty of a juror was made as little harassing as possible. The Lieutenant-Governor was of opinion that, in order to render the system applicable under all circumstances to the districts into which it had been, or into which it might hereafter be, introduced, provision should be made by law for empannelling a special jury whenever the Sessions Judge might think it necessary for the ends of justice to adopt this course; and also that the time had arrived when an attempt might be made to prevent access to the jury during the progress of the trial. He was not disposed to accept the recommendation of the High Court for reducing the number of the jury from 7 to 5.

6. In their report on the criminal administration of the Regulation Districts of Bengal for the year 1865, the High Court remarked that the jury system had worked well in the districts into which it has been introduced in 1862. They observed that its success must of course depend partly upon the proper selection of persons to form the jury list of a district, but mainly upon the ability and care with which the presiding Judge performed his duty of setting before the jury the evidence adduced, its legal value, and its bearing upon the crime of which the parties were charged, and they therefore strongly urged the importance of invariably selecting the most experienced and efficient officers at the disposal of the Government to serve as Judges in the jury districts.

7. In February 1867, Sir Cecil Beadon, before severing his connection with the Government of Bengal, recorded his deliberate and mature conviction, founded on long experience and observation, and specially on the results of the system in the Lower Provinces, so far as it had been acted upon, that the trial of all offences before the Courts of Session, in all parts of these Provinces, ought to be by jury; and that the system might be universally adopted not only without prejudice to the administration of criminal justice, but with decided benefit to the courts, and with increased confidence on the part of the public in their judgments. He observed

that it had been his invariable aim to select the most efficient, and generally the most experienced, officers at his disposal, to serve as Judges in the jury districts, and that it might be in some degree owing to the care with which the selection of judges had been made that the system had been so entirely successful as far as it had been introduced. He added that, even if there were one or two Judges on the mofussil bench who were not fully competent to direct a jury, it seemed to him that this circumstance ought not to operate against the general introduction of a measure believed otherwise to be expedient. The Government of India coincided generally in the views expressed by Sir Cecil Beadon, but they were not in favour of the extension of the system suggested by him, as they preferred that its extension should depend in the main upon the assured capacity of the Judges available.

8. In their Registrar's letter No. 512, dated the 6th May, 1867, the High Court communicated their views on the following points in connection with the working of the jury system:—

(1) Whether the system should be extended to any districts besides those in which it was in force.

(2) Whether it should be extended to any other offences besides those to which it had been made applicable in certain districts.

(3) Whether any provision should be made for the empannelling of special juries.

(4) Whether it was desirable to frame rules for preventing access to juries during the progress of trials.

The High Court observed that they had had another year's experience of a system which was still new to the country, and that results had not been sufficiently encouraging to warrant them in recommending its extension either to new districts or to other classes of offences than those to which it had in some districts already been applied. With reference to the third point, the Court were of opinion that the preparation of special jury lists was undesirable by reason of the difficulty which was already experienced in keeping up the lists of persons qualified to act as common jurors in mofussil stations; and that any measure which was calculated to diminish the number of common jurors, or to lower the standard of intelligence required of them should be avoided in a country where the system was still upon its trial. As regards the fourth point, the Court were very decidedly opposed to the adoption of any such measure as the framing of rules for the seclusion of juries during the progress of trials. With the exception of the Commissioner of the Presidency Division, all the Commissioners of divisions, who were asked for their opinions on the points specified above, were opposed to the system of trial by jury.

9. The attention of the Government having been drawn to certain cases in which there had been a failure of justice, owing to the action of the juries which tried them, the Hon'ble Judges of the High Court were asked, in July 1871, for an expression of their opinion as to whether the system should be continued or not; and if not, whether it should be abolished or modified, and if modified, in what particulars. In reply, the High Court forwarded the opinions of nine of the most experienced Sessions Judges, seven of whom were opposed to the system, together with a minute by Mr. Justice Jackson, which was concurred in by the Judges of the English Committee. The High Court were not prepared to recommend the removal of any district where it prevailed from the operation of the system; and with regard to any change in the class of offences triable by jury, they stated their willingness to express their opinion upon it should circumstances arise indicating the need of change.

10. Mr. Justice Jackson was of opinion that in cases where popular superstitions, prejudices or predilections operated for or against the accused, it was very unlikely, or at best it was far from certain, that the verdict would be in accordance with the evidence. He observed that it was notorious that in some districts a jury would convict a man charged with dacoity on the slightest evidence, while in many cases it was extremely difficult to obtain a verdict of guilty in cases of perjury and even of forgery. Juries would often acquit, in the face of the clearest proof, rather than run the risk of conducing to a capital sentence, and more especially if the crime had arisen out of conjugal infidelity, and in some places it was next to impossible to obtain from Hindu jurors the conviction of a Brahmin. For these reasons, Mr. Justice Jackson strongly urged the necessity of amending the law in the direction of enabling the presiding Judge whenever he disapproved the verdict of the jury, to refer the case for final orders to the High Court. He also thought that the number of jurors (*viz.*, seven) prescribed by Government was unnecessarily large, and should be reduced. With these modifications he considered that the system might be maintained, and that it was too late to withdraw entirely a boon which had been granted ten years previously, and which was capable of being continued if proper safe-guards were employed. These recommendations were substantially adopted in

the Criminal Procedure Code of 1872. Under the Code of 1861 (sections 328 and 352) convictions and acquittals could be obtained only when there were certain fixed majorities in the jury. Under section 263 of the Code of 1872, a Sessions Judge was empowered to refer for the decision of the High Court any case in which he considered the verdict of the jury to be subversive of the ends of justice, and under section 236 the minimum number of the jury was reduced from five to three. No important changes in the system have been made in the Code of 1882; the only new provision being that in section 304, which empowers a jury to amend its verdict.

11. Without going so far as to pronounce the system of trial by jury to have been anything like a complete success, the Lieutenant-Governor thinks that it has worked fairly well in the more advanced districts to which it has been applied. Occasionally, no doubt, bad verdicts have been given by juries and miscarriages of justice have resulted; but since 1872, when, at the suggestion of Mr. Justice Jackson, the law was amended and a reference to the High Court allowed in cases in which the presiding Judge considered the verdict given to be wrong, these have decreased in number, and one of the faults of the system at present seems to be that Sessions Judges do not make use of the power thus conferred upon them as often as they should. It will be seen from paragraph 7 of this letter that Sir Cecil Beadon advocated the extension of the system to all the districts of the Lower Provinces so far back as 1867, when it had been in force for only five years. This proposal was apparently abandoned in deference to the view which had been expressed by the High Court that a longer trial should be given to the system in the districts into which it had been originally introduced. Upwards of 14 years have elapsed since Sir Cecil Beadon's Resolution of February 1867 was recorded, and Mr. Rivers Thompson thinks the time has now come when the matter might, with advantage, be reconsidered. I am accordingly to request that the Hon'ble Judges may be moved to favour him with an expression of their opinion as to the advisability of extending the system to the districts named in the margin, supposing that, in the opinion of the local officers who will at the same time be consulted by Government, it will be possible to prepare for these districts a sufficient jury list."

(1) Midnapore.
(2) Rajshahye.
(3) Rungpore.
(4) Mymensingh.
(5) Chittagong.
(6) Cuttack.

We have set out this letter at length because it embodies the deliberate opinion of the Local Government in 1884 on the working of the jury-system in the seven districts up to that time, and because the view expressed in it appears to be borne out by the papers before us relating to that period.

The High Court considered that the extension of the jury-system thus proposed was not desirable. The Judges (Mitter, Norris and Ghose, JJ., dissenting) reported against it in view of the following considerations:—

(1) The difficulty of procuring proper persons as jurors, regard being had to deficiency of education, using that term not only in its popular sense but in its widest acceptation.

(2) Superstition and prejudice which were still disturbing influences not unfrequently leading to failures of justice.

(3) Perversity, instances of which occasionally came to the notice of the Judges.

(4) Inability to grasp numerous details in complicated cases.

(5) Distaste for the duty shown by those whose services as jurors were specially desirable.

(6) The difficulty of providing a sufficient number of District Judges who were sufficiently experienced and qualified to preside at the trial of jury cases.

It will be observed that the opinion of the High Court was expressed only on the proposed extension of the system, and that neither the Government of Bengal nor the High Court contemplated any limitation of the system then existing, in respect either of districts or of the offences to which it had been applied since 1862.

xii. In 1890 the Government of India requested the Local Government

and the Judges of the High Court to consider and report how the system of trial by jury had worked in the Lower Provinces; what opinion was entertained as to its merits as a means for the repression of crime; and what improvements, if any, were called for in its application.

As far as the High Court is concerned, it is sufficient to say that most of the Judges suggested amendments of the law calculated to secure a better administration of justice, and that none of the Judges suggested any other alteration in the system existing, except Mr. Justice Tottenham, who proposed the abolition of trial by jury in capital cases in the mofussil.

xiii. On 22nd June 1891 the Lieutenant-Governor of Bengal reported that a careful consideration of the opinions and figures obtained by him left no doubt in his mind of the failure of the jury system in these Provinces in its present shape. His Honour accordingly proposed to withdraw certain classes of offences which under the orders of 1862 and since that time had been triable by jury in certain districts, and also to extend that system to the trial of offences relating to marriage, and further recommended certain alterations in the law in respect of references by Sessions Judges in case of disagreement with the verdicts of juries, the ascertaining of the reasons for such verdicts, and the right of appeal on the facts where a jury was not unanimous and the Judge did not record his agreement with the majority.

xiv. The Government of India approved of the proposed withdrawal and addition of certain classes of offences; and accordingly on the 20th October 1892, the Government of Bengal excluded from trial by jury in the seven districts in which that system of trial had been introduced in 1862, offences under the following chapters of the Indian Penal Code, namely :—

Chapter VIII (*offences against the public tranquillity*).

Chapter XVII (*offences affecting the human body*), with the exception of sections 363 to 369 (*kidnapping and abduction*), section 372 (*selling a minor for purposes of prostitution, etc.*), section 373 (*buying a minor for purposes of prostitution, etc.*), and section 376 (*rape*).

Chapter XVIII (*offences relating to documents and to trade or property marks*).

The Lieutenant-Governor further directed that all offences under Chapter XX (*offences relating to marriage*) and abetments of, and attempts to commit, such offences should be tried by jury in any Court of Session established in the seven selected districts. These orders took effect from and after the 1st November 1892.

xv. Subsequently the Lieutenant-Governor of Bengal, in his letter to the Government of India of the 2nd January 1893, stated that he desired to reconsider the matter in view of the distress and dissatisfaction, caused by the partial removal of what is valued as an important privilege, having been so great and so much beyond his expectation, and he suggested a Commission to consider the matter. This suggestion was approved of by the Government of India and the Secretary of State, and the present Commission has accordingly been appointed.

4. We understand our instructions to direct us to report with as little delay as possible whether in our opinion the classes of offences triable by jury in the seven districts should continue as notified on 20th October 1892, or should be altered by reverting to the former classification or by adopting

any new classification, and also to report what changes, if any, in the present Code of Criminal Procedure are desirable to prevent miscarriages of justice.

5. We propose to consider, firstly, how far it has been established that trial by jury as introduced into Bengal in 1862 has proved unsuccessful with regard to the administration of justice, to what extent any failures of justice imputed to it are attributable to juries, and, lastly, whether this system of trial should be withdrawn in respect of certain classes of offences so triable or whether, with proper safeguards, it should be maintained as under the orders passed in 1862.

The working of the system generally.

6. We have already shown the procedure in Sessions trials in Bengal since 1793, and the working of the jury system from its introduction in 1862 up to 1884, when the Local Government did not consider it to be a failure but thought that it had "worked fairly well."

7. In 1890 inquiry was made into the system of trial by jury and reports were called for by Government on the following points:—

(1) how the system had worked;

(2) what opinion was entertained as to its merits for the repression of crime; and

(3) what improvements, if any, were called for in its application.

The Judges of the High Court considered that the system was capable of improvement. Their opinion was not especially asked as to any withdrawal of the system in respect either of locality or of the classes of offences triable by jury. It was evidently thought by the Judges that no opinion on this subject was required by the terms of the reference to them, and though some of the Judges stated that difficulty had been experienced in obtaining proper verdicts in certain classes of offences, especially in cases of homicide, and various amendments in the existing law were suggested, only one Judge suggested the abolition of trial by jury in capital cases.

The reports from the Executive and Judicial Officers varied. The majority of the Executive Officers was opposed to trial by jury and condemned the system. Some of the Judical Officers reported strongly in favour of it; others reported against it. It is to be observed that in 1884 also the reports of the Executive Officers were more adverse than those of the Judicial Officers, and that in 1890 many of the Judicial Officers who reported against the system based much of their opposition to it on grounds not special to Bengal but equally applicable to England. Many of them were of opinion that in any country a trained Judge is a better tribunal for discovering the truth than an untrained jury. Apart from general considerations many of them complained of the reluctance of juries to convict in cases of homicide or murder, and of the reluctance of the High Court to interfere with the verdicts of juries in cases referred under section 307 of the Code of Criminal Procedure, 1882.

8. The Local Government was of opinion that these reports showed that trial by jury was a failure in Bengal in its present shape, and that, its total abolition being undesirable on political grounds, early steps should be taken to make such changes in its working as might be best calculated to limit the injury which it entailed.

The Local Government accordingly recommended that references by Sessions Judges, when they differ in opinion from the verdict of a jury, should be compulsory; that it should be incumbent on the Sessions Judge to ascertain and record fully the reasons of the jury for their verdict, as "a simple and reasonable way to enabling him to be sure that he ought to disagree with the

jury," and that there should be a right of appeal on the facts against the verdict of a jury, when the jurors are not unanimous, unless the Judge records his agreement with the majority. The Local Government also expressed its opinion that "the system of trial by jury in Bengal is particularly unfitted for certain classes of cases, especially those relating to murder and rioting" and it accordingly proposed to the Government of India that the trial by jury of offences under Chapters VIII, XVI (with some exceptions) and XVIII of the Indian Penal Code should be withdrawn, but that the system should be extended to offences under Chapter XX (relating to marriage). In the opinion of the Local Government the evidence adduced clearly pointed to the necessity of making the withdrawals proposed.

9. The Government of India were of opinion that the defects of the present system of trial by jury in Bengal, as well as in other Provinces, appeared to be mainly attributable to two causes:

(1) To the extension of the jury system (*a*) to areas to which it is unsuitable, and (*b*) to classes of offences which, as the experience now gained has shown, ought not to be cognizable by juries.

(2) To the fact that the provisions of section 307 of the Code of Criminal Procedure, which were intended to give Sessions Judges and the High Court power to remedy and correct wrong verdicts, have failed to fulfil this intention.

After pointing out that the Lieutenant-Governor had, under the existing law, full power to modify the orders of 1862 so as to withdraw any classes of offences from trial by jury, the Government of India expressed their conviction that the action which the Lieutenant-Governor proposed to take was fully justified by the results reported.

The Government of India were opposed to the proposal to make reference by a Sessions Judge compulsory in every case in which he might disagree from the verdict of a jury; they disapproved of the proposal to empower Sessions Judges to question juries as to the reasons for their verdicts, except in so far as might be necessary to ascertain what the verdicts were, as provided by section 303 of the Code, but they noted for consideration on an amendment of the law the question whether before or after a general verdict has been taken, special verdicts should not be required on particular issues of fact, if not on the general credibility of particular evidence; and lastly, they disapproved of allowing an appeal against the decision of a jury, at least until all other available methods for the improvement of the system had been exhausted.

10. On 20th October 1892 orders, as already stated, were passed by the Lieutenant-Governor withdrawing from trial by jury in the seven districts of Bengal various classes of offences, and extending that form of trial to offences relating to marriage, as well as to abetments of, and attempts to commit, such offences.

11. In their Despatch to the Secretary of State dated 21st December 1892, the Government of India thus summed up the result of the inquiries held and the information so acquired—

"The results of the recent inquiry and the combined weight of high authority, which it disclosed, appeared to us to point distinctly to the adoption of one or other of two alternatives (1) either by legislation to impose the further restrictions on the jury system which are declared by the Local Government and the High Courts to be necessary to provide against failures of justice, or (2) to invite the responsible Local Governments to consider the question of making such necessary changes in the system as are practicable under the existing law."

12. We think that in the recent inquiry sufficient attention has not been

given, by many of the officers who have reported against it, to the inherent merits of jury trial as a system, which may be held to compensate for its defects, or to the special advantages which it possesses in a country like India, and which must be set off against the special disadvantages necessarily to be expected. As to the first, we would quote the words of Sir J. F. Stephen in his History of the Criminal Law of England (Vol. I, p. 572), which express our opinions in more appropriate language than we could offer. After considering the relative advantages to a proper administration of justice from trial by a jury, special and common, and from trial by a Judge alone, and generally expressing an opinion adverse to trial by common juries, Sir J. F. Stephen proceeds to discuss the benefits resulting from the system of trial by jury:—

"There is a third point of view from which trial by jury must be considered, namely, its collateral advantages, and those I think are not only incontestable in themselves, but are of such importance that I should be sorry to see any change in the system though I am alive to its defects. They are these:—

"In the first place, though I do not think that trial by jury really is more just than trial by a Judge without a jury would be, it is generally considered to be so, and not unnaturally Though the Judges are, and are known to be, independent of the executive Government, it is naturally felt that their sympathies are likely to be on the side of authority. The public at large feel more sympathy with jurymen than they do with Judges, and accept their verdicts with much less hesitation and distrust than they would feel towards judgments, however ably written or expressed.

"In the next place, trial by jury interests large numbers of people in the administration of justice and makes them responsible for it. It is difficult to overestimate the importance of this. It gives a degree of power and of popularity to the administration of justice which could hardly be derived from any other source.

"Lastly, though I am, as every Judge must be, a prejudiced witness on the subject, I think that the position in which trial by jury places the Judge is one in which such powers as he possesses can be most effectually used for the public service. * * * * * * *

"I think, however, that the institution does place the Judge in a position in which, with a view to the public interest, he ought to be placed,—that of a guide and adviser to those who are ultimately to decide, and a moderator in the struggle on the result of which they, are to give their decision. The interposition of a man, whose duty it is to do equal justice to all between the actual combatants and the actual Judges on the result of the combat, gives to the whole proceedings the air of gravity, dignity, and humanity, which ought to be, and usually is, characteristic of an English Court and which ought to make every such Court a school of truth, justice, and virtue. In short, if trial by jury is looked at from the political and moral point of view, everything is to be said in its favour, and nothing can be said against it. Whatever defects it may have might be effectually removed by having more highly qualified jurors. I think that to be on the jury list ought to be regarded as an honour and distinction. It is an office at least as important as, say, that of guardians of the poor, and I think that if arrangements were made for the comfort of jurors, and for the payment of their expenses when on duty, men of standing and consideration might be willing and even desirous to fill the position."

13. As regards India the system has special merits and special drawbacks. Some of its special advantages arise from the fact that our Criminal law is foreign, and that it is desirable to familiarize the people of India with it, by making them take part in its administration under the guidance of Judges who can explain to them its reasonableness and justice. Some, from the fact that the Sessions Judges are also foreigners and that as compared with them, even after they have acquired experience from a prolonged residence in the country, a local jury (supposing the jurors to be intelligent and honest) should be better able to draw inferences of fact and to discriminate between the truth and falsehood of conflicting oral evidence given in their own language. Further, the odium of what may appear harsh punishments is shifted in great part, from the Government, and the dread, however unfounded it may be, of the

all-pervading influence of the Government affecting the judgment is removed. These advantages are sufficient to compensate for a certain number of cases in which criminals may escape conviction or may be convicted of lesser crimes than the evidence might warrant.

On the other hand it was always evident from the beginning that the introduction of the system in India was an experiment involving certain risks. The people were unused to it; the diversity of races, religions and castes might cause a bias in the minds of the jurors in particular cases; it was known that there was amongst many of them a reluctance to be accessory to the taking of life. This last feeling varies much in different parts of the country and among different sects, and is said in some places, such as Surat, to form an insuperable obstacle to securing a conviction in a case of murder. These difficulties no doubt deterred the Government from introducing the system over the whole province of Bengal and led them to introduce it in the first instance in the seven most intelligent and advanced districts. These difficulties also led to the introduction of section 263 of the Code of 1872, now re-enacted in section 307 of the Code of 1882, so as to correct the miscarriages which must occasionally occur in any country where trial by jury exists and which experience was held to have shown occurred in an appreciable number of cases in Bengal.

14. The opinions before us show that experienced officers have frequently complained of the prevalence of wrong verdicts, which they have attributed to various innate defects in the jurors. The statistics on the other hand do not show that there has been any larger number of such cases than might have been reasonably expected, and they certainly do not indicate any break down of the system. We think that considerable weight should be given to the opinions of competent observers. Still the statistics are of great importance as indicating the number of trials, the number of cases in which the Judge has disagreed with the jury, the number of cases referred, and the result of references; and they form a sound basis for judging how far the matters complained of have operated so largely as to seriously interfere with the administration of justice. Opinions of this character have been expressed from time to time since 1862, but they have never been accepted as sufficient material for the condemnation of the system. There is reason to think tha the variance between the adverse opinions and the actual results shown by the statistics can be explained by the bias caused by the occurrence of some case, in which the unexpected results have shocked these officers, who are thus too easily led to believe in the prevalence of the influence which may have caused a failure of justice in an individual case. Having formed this strong opinion and probably reported it to their superior officers, and having satisfied themselves of the existence of certain tendencies or prejudices calculated to interfere with the correctness of verdicts, and seen some instances of their operation, they have too readily assumed that these tendencies and prejudices were overwhelming and generally operative to the subversion of justice, without considering how far education or a sense of responsibility might counteract them and might have led to the majority of the verdicts being such as could not have been given if the tendencies and prejudices in question had swayed the decision of the jury.

Assuming that such tendencies and prejudices on the part of jurors do exist, the statistics show that they do not operate to anything like the extent which might be expected from the perusal of many of the reports made to Government.

15. It must be borne in mind that some of the erroneous verdicts are probably due to want of practice on the part of the Judges in the very difficult art of charging a jury. A good and clear charge or an inefficient one frequently makes all the difference in a verdict. The careful appointment of only the best and most experienced Judges to jury districts must mitigate this danger, but the exigencies of the service must occasionably cause inexperienced officers to be temporarily appointed.

Some of the verdicts alleged to be erroneous may be fairly attributable to distrust of police evidence and of the manner in which cases are got up by the police. This distrust has not been without reason in the past, but steps have been recently taken to improve the police generally, and in particular to secure that the investigation and preparation of cases shall be entrusted to a higher and more trustworthy class of officers. With these improvements the distrust may be expected to gradually disappear.

Steps also have been taken to revise the jury lists so as to obtain a better class of jurors. No doubt this will have a most appreciable effect upon the character of the verdicts, and we notice that one Sessions Judge already reports an improvement from this cause.

16. For such erroneous verdicts as may be given, in spite of all improvements of the kind we have mentioned, and in spite of the increasing education of the people, the remedy of a reference under section 307 of the Code of Criminal Procedure ought, we think, to be sufficient. But there is a considerable body of opinion that this safeguard does not work as well as it ought to do owing to two causes,—the reluctance of Sessions Judges to refer cases, and the disinclination of the High Court to disturb a verdict when the case has been referred. This evil, so far as it exists, may, we think, be met by an alteration of the law. This matter we shall discuss later on. It cannot safely be inferred that, in every case in which a Sessions Judge has disagreed with a verdict but has declined to refer the case, the verdict was necessarily wrong. Even after allowing for the reluctance to refer abovementioned, many of the cases must belong to that class where the Judge is not sufficiently confident of the correctness of his own conclusions, as against those of the jury, to feel that for the ends of justice he is bound to press his opinion, or to be certain that the case is not one in which two opinions can be reasonably formed on the evidence. In such cases there is a fair probability that the jury may be right, for there are many referred cases in which the High Court has on a full consideration of the evidence adopted the same conclusion as the jury and rejected that of the Judge.

17. We have examined certain statistics showing the percentages of judgments of Sessions Judges sitting without a jury which have been reversed or modified on appeal. There is no possibility of drawing from these statistics any safe deduction as to the comparative correctness of such judgments and the verdicts of juries, because the former are open to an appeal on the facts in every case at the instance of the accused, whereas no appeal on facts ordinarily lies from the verdict of a jury. These statistics, however, show how possible it is for Judges conscientiously to come to different conclusions on the same evidence in a large percentage of cases, and emphasise the observation that it is unsafe to assume, as a rule, that the Judge is right and the jury wrong when they disagree.

Under section 374 of the Criminal Procedure Code all sentences of death are referred to the High Court for confirmation, and that Court, before confirming

any such sentence, considers the evidence, whether the case has been tried by a jury or not. The statistics for six years show that 220 cases were referred under this section, and that in 18 cases, or about 8 per cent., the persons convicted and sentenced by the Court of Session were acquitted by the High Court. These cases are from all the districts of Bengal, including jury districts; and the figures indicate that, whatever be the form of tribunal, a certain percentage of reversals must be expected upon revision by a higher Court, and that erroneous convictions occur in a considerable number of cases.

18. We have not been able to find any reliable evidence of any deterioration in the verdicts of jurors since 1884. We have prepared, from the Annual Administration Reports of the High Court, a statement showing the results of trial by jury since 1877. This statement shows the number of cases tried by juries, the number of such cases in which the verdicts have been approved by the Sessions Judge, the number of cases referred, and the result of the cases tried by the High Court on such references. The returns on which the Government of India and the Bengal Government have proceeded relate only to the five years ending 1891. We have accordingly also showed the results for each of the preceding periods of five years, which are as follows :—

	1877—1881.	1882—86.	1887—1891.
Number of trials held	1,988	1,692	1,505
Verdicts approved by Sessions Judges .	1,696	1,384*	1,208
Cases referred	118	108	97
Verdicts accepted by High Court in such cases	38†	48†	44†
Verdicts set aside or modified by High Court in such cases	75†	66†	48†

* In 14 cases of 1884 no approval or disapproval was expressed, the Judge having vacated office without recording his opinion.

† Cases actually disposed of during the period.

These returns, in our opinion, show no deterioration during the five last years, on the figures of which period the system of trial by jury has been condemned. If the slight variation can be accepted as any criterion, it would seem to show less cause for dissatisfaction. If, on the other hand, we take the returns of 1883, which the Government of Bengal must have had before them when their letter of 1884 was written, stating that, though the system of trial by jury might not be said to be "anything like a complete success," it had "worked fairly well," we find that out of 344 trials held, the Judge concurred with the verdicts in 292 cases, disapproved wholly in 33, and partly in 19 cases, and referred only 15 cases, out of which the verdicts were accepted in only 3 and set aside in 12. In 1891, on the other hand, the results were much more favourable to juries, for out of 20 references made and tried, the verdicts were set aside and affirmed in an equal number. So far, therefore, as statistics go, the results certainly do not indicate a deterioration.

19. After the fullest consideration of the very abundant materials before us we cannot come to the conclusion that the jury system in its present shape has proved a failure in Bengal. Our general conclusion is the same as that arrived at by the Local Government in 1884, that "the system has worked fairly well in the more advanced districts to which it has been applied." We think that the evils complained of can be sufficiently met by progress on the lines previously followed and by slight alterations of the law so as to express, in terms open to no doubt, what we understand to have been the intention of the Legislature in 1872 and 1882.

Murder Cases.

20. It is in trials for murder that complaints have been most general of failure of justice because juries are unwilling to convict.

This is a complaint which has been made ever since the introduction of the system, and is one which section 307 was designed to meet. But the statistics show that the reluctance to convict in capital cases, so far as it exists as a sentiment, has been to a great extent overcome. We do not find that it can be imputed to any of the seven districts in Bengal, as it has been to three districts in Bombay, that there exists such an antipathy to the taking of life in any form on the part of a large and influential class of the community, as renders it impossible to obtain verdicts of conviction, however clear the evidence may be. We observe that both the Government and the High Court of Bombay propose that charges of murder should still remain triable by jury in the two jury districts of that Presidency to which these special objections do not apply. The complaints in Bengal are more of a general character, that juries are prone to acquit in cases of homicide, as they are too ready to convict in cases of dacoity and kindred offences.

Taking the statistics of trials by jury in murder cases in the seven districts of Bengal, the results cannot, we think, be regarded as very unfavourable; nor are they especially unfavourable in cases in which Brahmins were the persons under trial.

We find that in six years, *i.e.*, from 1887 to 1892, the total number of murder cases tried in the jury districts was 404. Of the persons charged with murder in these cases, 23 were Brahmins. Of these, 13 were acquitted and 8 convicted on verdicts concurred in by the Sessions Judge. Two cases remain; in one, a case from Nuddea, the verdict of the jury, though not approved by the Sessions Judge, was not referred to the High Court, evidently on the ground that the Sessions Judge's dissent was not complete. In the other case a Brahmin named Khan Chand Boid, a constable employed to guard the Government Treasury at Hooghly, was convicted by the High Court against the verdict of the jury and was sentenced to transportation for life.

The Reports show that in one case (20 W. R., 19) a jury at Hooghly convicted one Ramsodoy Chuckerbutty, a Brahmin, of murder, and the Sessions Judge passed sentence of death, but a majority of the Judges of the High Court who tried the case acquitted on the facts. In an unreported case at Howrah a Brahmin, named Ram Charan Mookerjee, was in 1891 convicted of murder by a Hindu Jury and sentenced to death, but was acquitted by the High Court.

No case has been brought to our notice in which an erroneous verdict can be attributed to undue deference to the social position of the accused person. If there be any such case, it is not improbable that the verdict may be due in a great measure to greater care in the defence and to the accused being better able than an ordinary criminal to obtain the services of an experienced and competent legal practitioner.

We have had inquiries made as to the status and position of the persons whose cases have been referred to the High Court by Sessions Judges who disagreed with the verdict, and we find that in an overwhelming majority of cases these persons were of humble position and low caste and in many instances too poor to afford the expense of being represented at the hearing of the case before the High Court.

Riot Cases.

21. It has been said that riot cases ought to be withdrawn because they are complicated, because there is apt to be local feeling, and because the results of

the trials are unsatisfactory; and the Shambazar case is quoted as a convincing proof of this. These cases in Bengal present peculiar features. Generally there are two parties to the riot, and the prosecuting party are unwilling to state the actual truth as to the occurrence, lest it should appear that they too have rioted. There is no class of cases in which it is more difficult to ascertain the truth as regards either the circumstances of the riot or the participation of the accused in it. It is not unusual for the prosecuting party to introduce as actors in the riot persons belonging to the opposing party who were not present at the time. The large number of cases in which all or some of those who have been convicted by Sessions Judges without a jury have been acquitted by the High Court on the ground of the untrustworthy character of the evidence or of inconclusive identification, shows how unsafe it is to conclude that it is always the fault of the tribunal if, when a riot has undoubtedly taken place, it is impossible to obtain a conviction. The untrustworthy character of the evidence in these cases has usually more to do with this result than any incompetence in the tribunal.

Much might be done to simplify these cases for the jury by trying the accused in small batches, as allowed by section 239, and by the Judge, after summing up generally on the circumstances of the alleged riot, summing up clearly as to the evidence of identification against each of the accused, and its value.

The objection arising from local feeling can be met, where it exists, by the transfer of the cases to another district under section 526.

22. The Shambazar case is a very peculiar one. There was a notorious riot of a very grave character which could not be doubted or disputed. We have not the evidence before us so as to express an opinion on it even if it were desirable to do so; but it is, we think, clear that there must have been very grave defects in the evidence of identification. For, had the identification of the accused been as clear as the occurrence of the riot, it is not conceivable that the experienced Judge who tried the case would not have referred it to the High Court. He must have been well aware of the numerous cases in which the High Court has reversed unanimous verdicts of juries when they appeared to be clearly wrong.

We do not find any sufficient case made out for the withdrawal of this class of cases, *i.e.*, Chapter VIII of the Penal Code, from the cognisance of juries.

Forgery, etc.

23. No cases have been brought to our notice to show any substantial reason for withdrawing cases under Chapter XVIII of the Indian Penal Code (offences relating to documents or to trade or property marks) from trial by jury. The complaints made have been of a general character and have not been established.

Working and proposed amendment of section 307 of the Code of Criminal Procedure.

24. It has been urged that the remedies provided by law to prevent miscarriages of justice through erroneous verdicts have not been consistently applied, that there has been reluctance on the part of Sessions Judges to refer cases which should have been referred, and that in dealing with referred cases there has not been that uniformity of practice amongst the Judges of the High Court which is so necessary for an efficient administration of justice. We have had under consideration the judgments delivered in such cases during the last five years, and also in other cases published in the Law Reports. It has been argued that in some of these cases, so far as the judgments show, the opinions of the Sessions Judges have not been taken into consideration, and that the

Judges of the High Court have been hampered in the consideration of the cases on their merits by analogies of English law applicable to the revision of verdicts in civil cases by Judges who are not judges of the facts, and have rather required the party supporting the reference to show that the particular verdict was "perverse or unreasonable," which are the words used in the older English cases; or, if the case was dealt with without argument, have considered the case only from that point of view; although there are cases in which the Judges have considered the evidence on the merits in order to determine whether the view taken by the jury or that taken by the Sessions Judge was correct.

On the other hand it has been argued that all that can be deduced from the reported cases is that some Judges have given more weight to the opinion of a jury than others; but that as this manifestly depends on the different points of view from which different Judges regard the same matters, the Legislature could not possibly lay down any rule regarding the degree of weight to be attached to the verdict of the jury or the opinion of the Sessions Judge.

To remove all doubts and to define the duties of Sessions Judges and of the High Court in more clear language, we recommend that for the words "so completely that he considers it" in the first paragraph of section 307 of the Criminal Procedure Code, 1882, the words "and is clearly of opinion that it is" should be substituted, and that the last paragraph of the same section should be modified so as to run somewhat in the following terms:—

"In dealing with the case so submitted the High Court *shall consider the entire evidence, giving due weight to the verdict of the jury and to the opinion of the Sessions Judge and of the dissentient jurors, if any, and* may exercise etc., etc.," continuing in the terms of that section. The words in italics are those which in our opinion should be introduced.

25. We learn the intention of the Legislature as to the duty of Sessions Judges from the observations of the Honourable Mr. J. F. Stephen:—

"We do not, of course, mean that the Judge should act in this manner in every case in which he has doubts as to the propriety of a verdict, or even in those cases in which he feels that, if he had been a juror, he would not have returned the same verdict. Our intention is that he should exercise the power in question in those cases only in which it is necessary to do so, in order to prevent a manifest failure of justice; and having regard to the strong motive which the Judge always has for avoiding all future trouble by accepting the view taken by a jury, I think there is little reason to fear that the power will be abused."

To encourage disagreement from the verdict of a jury, or to require a reference in every case in which the Sessions Judge would have come to a different conclusion, would be attended with mischievous results. Amongst these we may point out that it would by degrees utterly destroy all sense of responsibility amongst jurors, a feeling which it is obviously desirable to strengthen, rather than to impair; and the unfortunate effects that would probably ensue from the removal of all such trials to the High Court to be decided on the bare record, and without the advantage of hearing the evidence given.

We understand the meaning of the law to be, that if the Sessions Judge, after considering the fact that the jury or a majority of them have arrived at a certain conclusion, disagrees with that conclusion, and is clearly of opinion that it would occasion a failure of justice if he were to accept the verdict, it is his duty then, and then only, whatever the result may be, to refer the case to the High Court. The two elements (1) disagreement with the verdict and (2) the opinion that he cannot record and give full effect to the verdict without

causing a failure of justice, are distinct and should be kept so. The alteration proposed is slight, but we trust that it will serve to make the law clearer and to emphasise the duty of a Sessions Judge not to record a verdict which he is satisfied will cause a failure of justice merely because he is uncertain whether the High Court will concur in his opinion, while making it equally clear that he ought not to refer unless he is satisfied that by giving effect to a verdict a failure of justice will ensue.

26. With regard to the second amendment recommended, we think that it was intended that the High Court should form an independent opinion on the evidence in the same way as it is bound to do, and invariably does, in an appeal in a case tried with Assessors, giving due weight to the opinion of the Sessions Judge as well as to the verdict of the jury. If we are correct in this view, it is desirable that the law should be expressed in clear terms admitting of no doubt.

With the law thus expressed we think that sufficient safeguards would be provided against any miscarriages of justice from erroneous verdicts.

27. After considering all the matters above set forth, including the probable effect of the further safeguards we have recommended, and the fact that for thirty years the offences specified in the orders of 1862 have been tried by juries, and that grave distress and dissatisfaction has been caused by the partial withdrawal of what has come to be regarded as a boon and a privilege, and considering also that, while it is necessary that justice should be administered, it is equally necessary that the subject should feel and be satisfied that it is being properly administered, we have come to the unanimous conclusion that the classification of offences triable by jury as it stood before the 20th October 1892 should be reverted to.

The additional safeguards and improvements recommended in our report will, we anticipate, diminish such evils as exist at present, but it is not in our opinion necessary or desirable to delay reverting to the former classification until the necessary legislation can be carried out. At the same time we think it desirable that the alteration in the law recommended by us should be made with the least possible delay.

28. We have also considered how far there should be any changes in the classification of offences triable by jury. We can suggest no improvement in the classification of offences as given in the orders of 1862. We prefer a classification by Chapters of the Penal Code to one by the degree of punishment which may be imposed, as in Bombay. The Bengal classification is more simple and not open to confusion resulting from charges for offences not triable by jury being added to charges for offences so triable.

Offences relating to marriage.

29. We observe that by the recent order offences under Chapter XX, Indian Penal Code (*offences relating to marriage*), have been made triable by jury, and we have considered whether this is reasonable and expedient. The change has no doubt been prompted by a desire to leave to juries the determination of cases in which matters relating to their social or religious habits or customs may be involved. It seems to us, however, that in consequence of the diversity of religious and social habits and caste-customs, this object will not be attained so well as in a trial with the assistance of assessors. The jurors are selected by lot and it may so happen that by this process none of the very religion or class which should be associated for the trial may be selected. For instance, where the parties in a trial for an offence relating to marriage may be all Mahomedans, a jury consisting entirely of Hindus may be selected by lot, and where the parties are Chamars or members of the lowest classes, a jury of Mahomedans or Hindus of the higher and educated classes,

ignorant of all the habits and customs of the parties, may be selected. On the other hand, in a trial with the assistance of assessors the very opposite results can be secured, because the Sessions Judge is able to *choose* persons to act as assessors, who are of the same caste or religion or have intimate knowledge of the customs of the parties. Advantages too can be derived in such cases from the more intimate relations which exist between a Judge and assessors than between a Judge and a jury. If, therefore, we have rightly understood the reasons which have induced the Local Government to include offences relating to marriage amongst those triable by jury, we would recommend that they be excluded.

Extension of the system to other offences.

30. We have also had under consideration whether trial by jury in the seven selected districts should be extended to the trial of other offences. We feel, however, that, with the information before us, we are not competent to express any safe opinion on this matter. It is one that can be determined only after detailed inquiry which, from the instructions that we have received to submit our report with as little delay as possible, we have not thought it our duty to undertake. It is a matter that can be separately dealt with by Government.

31. Several minor points in connection with the terms of the reference made to us have been considered and discussed, and upon these we desire also to express an opinion.

Section 303, Code of Criminal Procedure.

32. It has been suggested that the terms of section 303 of the Code of Criminal Procedure should be amended so as to enable a Sessions Judge to obtain more clearly the opinions of the jury on parts of the evidence so as to learn and place on record the grounds upon which the verdict was arrived at. We are not in favour of any alteration in the present law, which provides sufficient means for obtaining a verdict, and we think that there are strong objections to anything of the nature of a cross-examination of the jurors as to details of a case so as to obtain their opinion on portions of the evidence. Amongst these it will be sufficient to say that it must very frequently happen that the jurors may individually arrive at the same conclusion by different processes of reasoning, or they may find difficulty in expressing intelligently or logically a conclusion fairly arrived at on consideration of the entire case. No doubt in certain cases, for instance, in cases of culpable homicide not amounting to murder, or of house-breaking with intent to commit an offence, it may be necessary to give a special verdict to determine the exact offence, so as to regulate the sentence; but the terms of the present law sufficiently provide for this and we are opposed to any alteration for the purposes suggested.

It has also been proposed to permit questions to be put to the jurors after verdict delivered, so as to enable the Sessions Judge to determine whether he should refer the case to the High Court, as well as to enable the High Court itself in a referred case to learn whether a verdict was on reasonable and proper grounds; but the same objections equally apply. We prefer to adopt the course recommended by us, *viz.*, that each case referred by a Sessions Judge should be tried by the High Court on its merits on the evidence, as less likely to cause embarrassment and more certain to ensure a just and proper decision.

Special Verdicts.

33. We have considered anxiously whether it is practicable to enable the Judge to direct the jury to return a special verdict on issues framed by him. This proposal is supported by high authority, and we are fully sensible of the advantages it would be to the High Court in referred cases to have a special, instead of a general, verdict to deal with, but we have reluctantly come to the conclusion that such a procedure would be liable to create greater evils than it would remedy.

34. We agree with the conclusion arrived at by the Government of India that it is not desirable to have Special Juries, in so far as these may tend to weaken Common Juries, but at the same time we are of opinion that cases may occur in which the employment of a Special Jury may be highly desirable in the interests of justice as well as to satisfy public opinion, and we think that means may be provided which will meet the objection raised. It might be provided that while there is a separate list of Special Jurors, the gentlemen on that list should not be exempted from ordinary service as Common Jurors. They might be included also in the general list and be liable to serve when drawn for ordinary trials without being reserved only for trials by Special Juries. No additional service within the prescribed period of six months should be required. It might be left to the Local Government on consideration of the jury list and other matters, peculiar to a district to which trial by jury may have been extended to declare that in the Sessions Court of that district trials by Special Jury might be held, and it might be left to the discretion of the Sessions Judge of that district to determine in each case, on application made, whether a trial should be so held, provided that the application be made in sufficient time to summon a Special Jury. If this recommendation be accepted, it will become necessary to amend the law, so as to provide for the preparation of Special Jury lists, and for summoning such Jurors. **Special Juries.**

35. It has been proposed by the Government of Bengal to reduce the number of jurors from five to three. The law permits a jury to consist of from nine to three members, according as the Local Government may direct. Under the Code of 1861, the minimum was five, and seven was the number fixed by the Local Government for juries in Bengal. The Code of 1872 reduced the minimum to three, and in 1873, with the concurrence of the Judges of the High Court, the number was fixed at five. We are aware of no reason for a further reduction. It is not stated that under the present rule service on juries is too frequent or irksome. On the other hand, we think that three, except on some special ground, is too small a number for a jury, and that if improper influences are attempted, they are more likely to be successful on the smaller number. **Number of Jurors.**

36. We also find no sufficient grounds assigned for altering the limits of age of persons liable to serve as jurors, and we observe that this limit was fixed by the Code of 1861 and has remained unchanged until the present time. **Age of Jurors.**

37. Under the Codes of 1861 and 1872, a jury list was prepared of "persons residing within 10 miles from the place where Sessions trials are held, or within such other distance as the Local Government may think fit to direct," but the Code of 1882, Section 319, made all persons between the prescribed ages liable to serve as jurors at any trial within the district within which they reside. We prefer that it should be left to the discretion of the Local Government as under previous legislation to determine, on consideration of the circumstances of each district, the area from which a juror should be selected, as districts vary in extent and in the means of travelling available. **Area of Selection of Jurors.**

38. We observe that attention has been directed to this subject, and that in the revisions recently made the lists have been considerably reduced by the exclusion of many unfit persons. There can be no doubt that much benefit will result from this, and strict attention should be enjoined to this important duty in the future. **Revision of Jury Lists.**

We notice that in one district the recent revision of the list of jurors has

resulted in the exclusion of the names of all Honorary Magistrates, that is to say, of a class of men who, for the very reasons for which they have been given Magisterial powers, are best fitted to serve as jurors. They are not liable to exemption under any of the provisions of section 320 of the Procedure Code; and we think that all Honorary Magistrates as such should be included in all lists of jurors in the districts in which they reside.

We would also invite attention to the large number of exemptions granted under clause (*k*) of section 320 of the Code. These include certain officers of the Eastern Bengal State Railway,* all Barristers practising in the Mofussil†, District and Assistant Superintendents of Traffic and Guards on the East Indian Railway,‡ and local Auditors on the Staff of Examiners of Local Accounts in Bengal§. The Chief Customs Authority or Chief Customs Officer is also exempted under section 10 of Act VIII of 1878, and he has power under that section to exempt from service as a juror any other officer of Customs whom he deems it necessary to exempt on grounds of public duty. We would suggest that the necessity of exempting such a large body of men, who *primâ facie* are well fitted to serve as jurors, should be carefully reconsidered. Such exemptions deprive the jury lists of some of the persons best fitted to serve, and further tend to take from the position of juror much of the dignity which should attach to it.

§ Letter to Accountant General, Bengal, No. 2067 J. of 8th May 1889, and Notification of the same date.

Accommodation for Jurors.

39. It has also been represented to us that sufficient attention is not paid to the convenience and comfort of those summoned as jurors, and that in consequence native gentlemen of recognised social position are reluctant to attend. The matter was dealt with by a Circular of the High Court, dated 9th August 1865, but it does not appear that adequate steps have been taken to give effect to the instructions regarding the accommodation for jurors.

Remuneration of Jurors.

40. On this point we are not unanimous and find some difficulty in making any recommendation. The question is one which more intimately concerns the native community, and our members who represent that community differ in opinion. The matter is of no great importance, and may be left for settlement by Government after inquiry such as we have not been able to make.

Seclusion of Jurors.

41. The question of the seclusion of jurors during the trial and up to the delivery of their verdict is one which was considered by the Local Government and by the High Court in 1867. It is sufficient for us to say that the High Court has power under section 296, Criminal Procedure Code, to make rules in this direction, that it has never seen its way to framing any such rules, and that we find ourselves equally unable to suggest any rules which would not be repugnant to the prejudices and customs of the native community in Bengal.

Right of Appeal.

42. We are aware that opinion in England is inclined to an appeal, but we are not aware with what restriction it would be allowed; we are, therefore, unable to determine how far any recommendation that we could make would be in accordance with the rule in England and also applicable to Bengal. It has been recommended on high authority that an appeal should be allowed in cases in which the verdict is not unanimous and where the Sessions Judge also disagrees, but does not consider it necessary to refer the case to the High Court. We are of opinion, however, that section 307 of the Criminal Procedure Code,

with the alterations that we have suggested, will provide adequate protection against failures of justice.

43. It has been suggested to us that some provision should be made for a *verbatim* record of Sessions Judge's charge to the jury, but, in the opinion of the majority of us, none of the suggestions made on this point are practicable. **Heads of charge to Jury, S. 367, C. P. C.**

44. In dealing with all these matters, we have abstained from going beyond the strict terms of the reference made to us. We may mention that discussion of other matters has been invited, but we have, for the reasons stated, not taken them into consideration. We consider that the matters referred to us are defined by the two paragraphs of the Resolution of the Government of India dated the 23rd February 1893, set out in the commencement of this report, and that we are not authorized to travel beyond them.

We, the undersigned, accordingly report that, in our opinion, it is desirable that the classes of offences which, before the 20th October 1892, were triable by jury in the seven districts of Bengal abovementioned, should be triable by jury in those districts, and that the present classification should be amended accordingly.

We further report that, in our opinion, it is desirable, for the purpose of preventing miscarriage of justice, to amend section 307 of the Criminal Procedure Code by the substitution of the words "and is clearly of opinion that it is," for the words "so completely that he considers it," in the first paragraph of that section, and by the insertion in the third paragraph of the words "shall consider the entire evidence, giving due weight to the verdict of the jury and to the opinion of the Sessions Judge and of the dissentient jurors, if any and"; and that it is also desirable for the same purpose to make such further amendments in the Criminal Procedure Code as may be necessary to carry out our recommendations hereinbefore set forth as regards special jurors and the area from which jurors should be selected.

Note by Sir Romesh Chunder Mitter, Kt.

I. As regards the question whether Trial by Jury in the seven selected districts should be extended to the trial of other offences, I think it right to add that in my opinion there are many offences in the Indian Penal Code and other Acts which were not made triable by jury in 1862, but which may now with advantage be made so triable. Certain offences under the Penal Code were probably not originally made triable by jury because they were not exclusively triable by Courts of Session. But cases coming within this class are, by reason of their importance, frequently committed to Courts of Session for trial, and many of these should, in my opinion, be tried by jury in jury districts. There seems, for instance, no reason why offences under Chapter IX or Chapter XXII of the Code should not be triable by a Jury when committed to the Sessions, considering that offences against Public Justice are so triable. Similarly the offence of Defamation (Chapter XXI) seems to me to be an offence eminently fit for trial by a jury.

II. As regards offences under special Acts, I am of opinion that there are several which might conveniently be made triable by jury. For example, when in the course of proceedings under the Registration Act, a person is charged with using a forged document and making a false statement with reference to it, it is manifestly inconvenient that, as regards the charge of forgery under the Penal Code, he should be tried by a jury, while on the same facts as regards the charge under Section 82 of the Registration Act he should be tried by the Judge with the aid of Sessions. This anomaly could be avoided by making all offences in the Sessions Court in jury districts triable by jury except those which are specially mentioned by the Local Government.

III. It seems to me of the utmost importance that in cases tried by jury there should be an accurate record kept of the Judge's charge to the jury. At present though the law requires that the Sessions Judge should record the heads of his charge to the jury, it contains no provision as to when or how such record should be made. As a matter of practice I am informed Sessions Judges generally record from memory or their own notes the substance of the charge delivered orally, after the verdict has been taken. This course is open to many obvious objections and is likely to lead to unsatisfactory results. When an appeal has to be preferred to the High Court in a jury case, the appellant in appealing against an alleged misdirection of the Judge is sometimes forced to complain of the Judge's charge, not as it was probably laid before the jury, but as it has been recorded by the Judge after the verdict has been delivered. I am of opinion that the record should contain a strictly accurate report of the charge as delivered by the Judge to the jury.

IV. In my opinion there are two courses, the adoption of either of which would secure this end :—1st, it should be made obligatory upon the Judge to write out his summing up before he proceeds to charge the Jury. But this is a course which I am informed, though occasionally adopted by Judges in the Moffussil, is fraught with inconvenience and is likely to delay the trial. I am therefore disposed to recommend that a Bench Clerk should be attached to each Sessions Court whose duty it should be to take down in short-hand the Judge's charge as it is delivered and whose transcript of the charge, when signed by the presiding Judge, should form part of the record.

(Signed) ROMESH CHUNDER MITTER.

Note by Maharaja Sir Jotindro Mohun Tagore Bahadur, K.C.S.I.

I sign the Report subject to the note recorded below.

I agree with my Colleague, Sir Romesh Chunder Mitter, Kt., in the opinions he has expressed in paragraphs 1 and 2 of his note appended to the Report, so far as they relate to the extension of trial by jury to other offences. I agree that all offences in the Sessions Court in jury districts should be made triable by jury save those which may be specifically excepted by the Local Government. *Primá facie* I see no reason why a majority of the offences which now come before the Sessions Court, and which are comparatively of a less serious nature than those included in Chapters 8, 17, 18, etc., of the Indian Penal Code, should not also be made triable by jury, especially as some experienced Government officials have themselves recommended the extension of trial by jury to those offences. I also agree in the opinion expressed in paragraph 3 of the aforesaid note regarding the importance of keeping a full and accurate record of the Judge's charge to the jury, but I am not sure how far the means suggested by my learned Colleague in paragraph 4 of his note are likely to secure practically the object aimed at.

(Signed) JOTINDRO MOHUN TAGORE.

SCHEDULE.

PAPERS READ AND CONSIDERED BY THE COMMISSION.

General Papers.

Resolution of the Government of India in the Home Department, No. $\frac{5 \text{ (Judicial)}}{201\text{-}208}$, dated 23rd February 1893.

Extracts regarding trial by jury from the Annual Reports of the Calcutta High Court on the Administration of Criminal Justice in Bengal for each of the years 1862 to 1891.

Extracts regarding trial by jury from the Annual Reports of the Sessions Judges of the 24-Parganas, Hooghly, Burdwan, Murshidabad, Nadia, Patna, and Dacca for the years 1883 to 1891.

Extracts regarding trial by jury from the Annual Administration Reports of the Bengal Government for the years 1864-65 to 1890-91.

Extracts regarding trial by jury from the letters of the Government of Bengal to the Government of India, on the High Court's Annual Reports on the Administration of Criminal Justice in Bengal for the years 1883 to 1891.

Extracts from the Proceedings of the Legislative Council of the 9th December 1870, 30th January and 16th April 1872, and 25th January 1884. Also extracts from the preliminary report of the Special Committee of the Legislative Council and from the supplementary report of the Select Committee on the Bill which became Act X of 1872.

Letter from the Government of India (Home Department) to the Chief Commissioner of Assam, No. 1109, dated 25th August 1892.

Letter from the Assam Administration to the Government of India (Home Department), No. 4661 J., dated 11th October 1892.

Also various memorials and representations addressed to the Commission by local bodies and by certain individuals.

No. 1523J., dated Calcutta, the 25th March 1893.

From—H. J. S. Cotton, Esq., c.s.i., Chief Secy. to the Government of Bengal,
To—The Secretary to the Government of India, Home Department.

The Lieutenant-Governor has been furnished unofficially with a copy of the Report of the Jury Commission, and feels bound, in accordance with the recommendation of the Commission, to withdraw the notification of this Government, dated 20th October 1892, making certain alterations in the classes of cases which are triable by a Jury in the districts to which the Jury system has been extended, at once. His Honour would have taken action in this direction on his own authority, were it not that he had already referred the question to the Government of India and had acted under the authority of the Government of India in issuing the notification. He considers therefore that the notification should be withdrawn with the authority of His Excellency the Governor-General in Council, and awaits the receipt of orders to this effect.

No. 357, dated Calcutta, the 28th March 1893.

From—C. J. Lyall, Esq., c.i.e., Secretary to the Govt. of India, Home Dept.,
To—The Chief Secretary to the Government of Bengal.

In reply to your letter No. 1523J., dated the 25th instant, I am directed to say that the Governor-General in Council authorizes the issue of a notification by His Honour the Lieutenant-Governor, under section 269 of the Criminal Procedure Code, withdrawing the notification of the 20th October 1892, by which certain changes were made in the classification of offences triable by Jury before the Courts of Session in the districts of the 24-Parganas, Hooghly, Burdwan, Murshidabad, Nadia, Patna, and Dacca, and restoring the classification of offences so triable in those districts which was in force prior to the issue of that notification.

NOMINATION OF REPRESENTATIVES TO SEATS IN THE COUNCIL OF THE LIEUTENANT-GOVERNOR FOR MAKING LAWS AND REGULATIONS ON THE RECOMMENDATION OF PUBLIC BODIES AND ASSOCIATIONS.

RESOLUTION.

JUDICIAL.

Dated Calcutta, the 25th March 1893.

UNDER Rule II of the Regulations which have been framed by the Governor-General in Council with the sanction of the Secretary of State under section 1(4) of the Indian Councils Act, 1892, for Bengal, it has been laid down that the nomination to seven seats in the Council of the Lieutenant-Governor for making Laws and Regulations shall be made by the Lieutenant-Governor on the recommendation of the following bodies and associations respectively, viz.—

A.—The Corporation of Calcutta;

B.—Such Municipal Corporations or group or groups of Municipal Corporations other than the Corporation of Calcutta as the Lieutenant-Governor may from time to time prescribe by Notification in the *Calcutta Gazette*;

C.—Such District Boards, or group or groups of District Boards, as the Lieutenant-Governor may from time to time prescribe as aforesaid;

D.—Such Association or Associations of merchants, manufacturers or tradesmen as the Lieutenant-Governor may from time to time prescribe as aforesaid;

E.—The Senate of the University of Calcutta:

Provided that the bodies described above under A, B, C, D, and E, respectively, shall each (except as hereinafter provided in Rule VII) have at least one Councillor nominated upon its recommendation, and A, D, and E not more than one each.

With reference to the above proviso, it has been decided that District Municipalities and District Boards shall each be ordinarily represented by two members.

2. Under Rule V (*c*) of the same Regulations, it has been laid down that the recommendation of a person for nomination by the Lieutenant-Governor shall be made "in the case of a group of Municipal Corporations, District Boards, or Associations by the majority of votes of representatives to be appointed according to such scale as the Lieutenant-Governor may from time to time prescribe by the Corporations, Boards, or Associations."

3. The Corporation of Calcutta and the Senate of the University of Calcutta will now be asked by a separate communication to recommend a person for nomination by the Lieutenant-Governor. The votes of the Commissioners of the Corporation of Calcutta will be given at a meeting of the Commissioners. Those of the Fellows of the Senate will be given by voting papers to be delivered personally to the Registrar, or forwarded by post under certain conditions. The Bengal Chamber of Commerce are already represented on the Council by the Vice-President of their body, the Hon'ble Mr. Playfair, and no steps can be taken under clause D of the Rule II above quoted until he resigns his appointment or the term of his office expires.

4. The following observations exclusively refer to the arrangements which will now be made regarding the nomination to the four seats which will be made by the Lieutenant-Governor on the recommendation of District Boards and of Mufassal Municipalities.

5. The Lieutenant-Governor has decided that both District Boards and Municipalities shall be grouped together separately division by division, and that the District Boards and Municipalities within each divisional area shall take it in turns to exercise the privilege which is now bestowed on them of recommending

a person for nomination to the Council. It is proposed that this privilege should be exercised by the groups of Municipalities and District Boards in each Division according to rotation. The following is a sketch of the form which the rotation may probably assume: but the Lieutenant-Governor cannot bind himself or his successor as to the exact order in which the privilege will in future be exercised:—

Date of election.	Municipalities.	District Boards.
1893 ...	... Presid ncy Division	... Patna Division.
	Rajshahi Division	... Chittagong Division.
1895 ...	... Burdwan Division	... Dacca Division.
	Orissa Division Chota Nagpur Division	... Bhagalpur Division.
1897 ...	... Patna Division	... Presidency Division.
	Chittagong Division	... Rajshahi Division.
1899 ...	... Dacca Division	... Burdwan Division.
	Bhagalpur Division	... Orissa Division.
1901 ...	... Presidency Division	... Patna Division.
	Rajshahi Division	... Chittagong Division.

and so on.

The necessary notification will now be published in the *Calcutta Gazette* specifying the groups of District Boards and Municipalities in the Divisions from which a recommendation will be made to the Lieutenant-Governor for the nomination to four seats in Council in 1893.

6. The Lieutenant-Governor is pleased to prescribe the following procedure under which each District Board and Municipality concerned shall, for the purpose of making its recommendation, proceed to elect from amongst its own members an electoral representative, who shall be entrusted with full powers to vote for a member to represent the group in Council.

7. In respect of Municipal Corporations, it has been determined that only those municipalities which enjoy a clear income from municipal resources proper of Rs. 5,000 and over shall exercise the right of electing an electoral representative. The voting power of each of these representatives will be calculated by the income of the municipalities concerned according to the following scale:—

	Votes.
Municipalities with an income of Rs. 5,000 and less than Rs. 10,000 will be entitled to	1
Municipalities with an income of Rs. 10,000 and less than Rs. 20,000 to	2
Municipalities with an income of Rs. 20,000 and less than Rs. 50,000 to	3
Municipalities with an income of Rs. 50,000 and less than Rs. 1,00,000 to	4
Municipalities with an income of Rs. 1,00,000 and less than Rs. 1,50,000 to	5
Municipalities with an income of Rs. 1,50,000 and less than Rs. 2,00,000 to	6
Municipalities with an income of Rs. 2,00,000 and less than Rs. 2,50,000 to	7
Municipalities with an income of Rs. 2,50,000 and over to ...	8

Each Municipality will elect one electoral representative only, and this representative shall be entitled to exercise all the votes of the Municipality which he represents.

8. All districts are considered by the Government to be of approximately equal importance, and each District Board will appoint one representative having one vote.

9. According to the scales above laid down, the following Municipal Corporations and District Boards will now proceed to elect their electoral representatives as follows:—

Municipalities in the Presidency Division.

District.	Name of Municipality.	Ordinary Municipal Income.*	Number of votes to be exercised by each representative.
		Rs.	
24-Parganas	Cossipore-Chitpur	1,16,260	5

10. Under Rule IV of the Regulations quoted, the Lieutenant-Governor now desires that intimation may be at once communicated by the Commissioners of the Divisions concerned to the Chairmen of all the Municipalities and District Boards enumerated in the above lists, requesting them to arrange without delay for the convention of a special meeting of each District Board and Municipality concerned at which one of their members may be elected to represent them for the purpose of recommending the nomination of a member in the Lieutenant-Governor's Council. The name of the electoral representative elected in each must be reported at once by the Chairman of the local body concerned for the information of the Commissioner of the Division.

11. The period of two months which is contemplated under Rule VII of the Regulations as the period within which a recommendation shall be made to the Lieutenant-Governor is hereby declared to run from the date on which

the Commissioner of the Division issues his invitation to the Chairman of any Municipality or District Board within the group concerned to elect one of their members to represent them for the purpose of recommending the nomination of a member in the Lieutenant-Governor's Council.

12. As soon as the electoral representatives are elected by the local bodies concerned, they will be called upon by the Commissioner of the Division to meet together on an early and convenient date with special reference to the limit of time imposed under rule VII of the Regulations, and at such convenient place as he may specify, for the purpose of electing by a majority of votes a person whom they will recommend to the Lieutenant-Governor to be nominated as a member of the Council. The names of all candidates put forward at such meeting shall be duly proposed by one of the electoral representatives present. The election shall be by ballot, and the person elected must obtain a majority of the votes of the representatives present. If on occasion of the first ballot an absolute majority is not obtained, the candidate who obtains the least number of votes shall be withdrawn from the election, and another ballot shall then be held for the remaining candidates, and so on until an absolute majority is obtained.

The electoral representatives present at this meeting shall elect among themselves a Chairman, who shall preside and be responsible for the fair and proper exercise of the ballot vote.

As soon as the election is made, the Chairman of the meeting shall without delay report to the Commissioner of the Division the name of the person so elected with the number of votes obtained and any other information which it may appear desirable to communicate, and on behalf of the meeting shall recommend to the Lieutenant-Governor to nominate for Council the person so elected. The Commissioner shall submit the report from the Chairman of the meeting, with any observations he may wish to add, to the Chief Secretary to Government, by whom the recommendations will be submitted to the Lieutenant-Governor.

13. Attention is drawn to the following Rule VI of the Regulations which have been framed by the Governor-General in Council and Secretary of State:—

VI.—It shall be a condition in the case of any person to be recommended by a Municipal Corporation or group of Municipal Corporations that he shall be a person ordinarily resident within the Municipality or the district in which it is situated, or in some one of the municipalities constituting the group or of the districts in which they are situated. A similar condition shall also apply to persons to be recommended by District Boards.

Under this rule it is not necessary that persons recommended shall be members of any Municipality or District Board concerned, but they must be ordinarily resident within the division from which the recommendation is made. Subject to this condition, the rules declare no limit of qualification, and it is left to the electoral representatives to recommend a person under Rule V(*c*) according to the majority of their votes.

14. The Lieutenant-Governor is anxious to ensure the success of the operation of the new rules, and with this object has been careful to provide that all the subsidiary arrangements now sanctioned shall, as far as possible, be given effect to by the local bodies concerned with the minimum of official interference He is confident, however, that District Magistrates will afford any assistance that may be required and do their utmost to facilitate the smooth working of the elections. The experiment now being tried is one of considerable importance, and the arrangements made are necessarily of an experimental character, and will be reconsidered if experience shows that they require modification.

ORDERED that a copy of this Resolution be furnished to all Commissioners for information and guidance and for communication to all the District Boards and Municipalities in their Divisions.

Ordered also that a copy be published in the *Calcutta Gazette.*

Ordered also that a copy be submitted with a covering letter to the Government of India for information.

By order of the Lieutenant-Governor of Bengal,

H J. S. COTTON,

Chief Secretary to the Government of Bengal.

APPOINTMENT OF A COMMITTEE TO REPORT ON THE MEDICAL NEEDS OF CALCUTTA.

RESOLUTION.

No. 1134Med.

Calcutta, the 28th March 1893.

READ—

Report on the Calcutta Medical Institutions for 1891.

RESOLUTION.—The question of providing suitable and sufficient accommodation for the gratuitous treatment of the sick-poor in Calcutta, whether as out-door or in-door patients, is one which has for many years engaged the attention of the Government of Bengal, while it has more lately attracted the notice of the Government of India who in July last intimated their opinion that the existing provision for the medical relief of the poorer inhabitants of Calcutta was still inadequate.

2. The Northern and Central portion of the city are fortunate in possessing a large number of excellent medical institutions, and their usefulness has frequently been acknowledged; but even in this part of the town there is a large tract in the north-east, where no public hospital or dispensary exists. On the other hand, with the exception of the Presidency General Hospital, which does not admit native cases, and the Military Hospitals, European and Native, which are necessarily exclusive, there is no institution south of Government House which provides accommodation for in-door patients. Dispensaries exist, it is true, for the out-door relief of the sick which are supported either by Government, the Municipality, or private benevolence, but useful and beneficent as their operations are, they cannot supply the place of a hospital for the treatment of the sick in the large area which lies south and east of the Calcutta *Maidan*.

3. In these circumstances, the Lieutenant-Governor has decided that a small Committee should be formed to consider and report upon the whole subject, and he is pleased to nominate as members the Hon'ble J. Lambert, C.I.E., and Surgeon Lieutenant-Colonel A. Crombie with Surgeon Colonel J. G. Pilcher, Inspector-General of Civil Hospitals, as their President, with power to add to their number. It will be the duty of these gentlemen to submit with as little delay as possible a report with a map showing what accommodation now exists, and what additional accommodation they consider to be necessary both for out-door and in-door patients. They should lay down what is in their opinion the maximum distance within which each resident of the town should be able to find medical relief, and they should indicate what parts of the city do not satisfy this principle, and where, therefore, new dispensaries or hospitals are required. They should also, after looking to the population which an institution so situated will serve, frame an estimate of the number of beds to be provided in each for the accommodation of males and females, but the question of cost of construction, or the source from which the funds for maintaining the institution should be drawn, need not be considered by them at the present stage. When this report has been received, the Lieutenant-Governor will be in a position to decide whether, and to what extent, an urgent need exists for more dispensaries or hospitals in the metropolis of Bengal.

By order of the Lieutenant-Governor of Bengal,

J. A. BOURDILLON,

Offg. Secy. to the Government of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 25th March, 1893.

No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.			
BURDWAN DIVN.			
1	Burdwan March 25, '93 Kalna ... Katwa ... Raniganj ..	1·18 2·02 0·94 0·12	Weather—cool for the time of year. Land being ploughed. Sugarcane being pressed. Supply of fodder and water sufficient. Though damaged by rain, a fair out urn of *rabi* and opium is expected. Cases of small-pox among cattle towards Chakai (in Jamui) are reported. Indigo coming up well. Plenty of fodder and water. Prices of common rice :— Srs. Sadar ... ... 12 to 16 } per rupee. Begusarai ... ... 15½ } per rupee. Jamui ... ... 14 } per rupee.
	28	Bhagalpur „ 25, '93 Banka ... Madhipura ... Supaul ...	0·10 0·06 0·20 Nil	Weather—fairly cool for the time of year. Prospects of crops as stated in last report. *Rabi* will yield at least 12 annas outturn. Common rice 15 seers 2 chitaks per rupee.
	29	Purnea „ 25, '93 Kishanganj ... Araria ...	0·07 0·77 0·05	Weather—cloudy at the beginning of the week. It has since cleared up. There is a strong west wind. Becoming hotter during the day, but cool in the mornings and nights. The recent rain as well as a hailstorm in the north of Kishanganj has caused some damage to the standing crops in those parts. Harvesting of *mung*, *khesari*, tobacco, &c., is going on. Gathering of gram and wheat and the sowing of paddy on low lands have commenced in Araria. *Rabi* prospects at Sadar good. Fodder and water plentiful. No cattle-disease. Prices stationary.
	30	Malda „ 25, '93 Chanchal ... Shibganj ...	1·11 0·02 1·03	Weather—first part of the week cloudy with heavy rain in the afternoon of the 21st. Fair and cool latterly. Harvesting of *rabi* crops has commenced ; the outturn is expected to be 14 annas. The sowing of *bhadoi* rice and jute is going on in some places. Common rice sells at from 13 to 16 seers per rupee. Fodder and drinking water sufficient.
	31	Sonthal Parganas „ 25, '93 Deoghur ... Godda ... Jamtara ... Pakur ... Rajmahal ...	1·20 2·06 0·10 1·23 0·52 Nil	Weather—early in the week thunderstorms and on one day hail. The west winds have begun. Nights still cool. Harvesting of *rahar*, linseed, gram, peas, *khesari*, barley and wheat has begun. *Mahua* beginning to fall. Mangoes in Rajmahal promise fair. Price of rice about 14 seers per rupee. Fodder and water sufficient.
PATNA DIVISION.	32	Patna „ 25, '93 Barh ... Bihar ... Dinapore ...	0·33 0·27 0·07 0·47	Weather—getting warm ; nights and mornings still cool. There was a hail-storm at Barh on the 20th instant which has done some injury to the standing and harvested crops. *Rabi* cutting and opium gathering almost finished. About 15 annas of opium has been collected, and the outturn is reported to be satisfactory. Prices of common rice :— Srs. Sadar ... ... 16 } per rupee. Barh ... ... 11½ } per rupee. Bihar ... ... 16¾ } per rupee. Dinapore ... ... 15 } per rupee.
	33	Gaya „ 25, '93 Jahanabad ... Aurangabad ... Nawada ...	Nil Nil 0·05 0·16	Weather—bright on the whole, and cool, but west winds now beginning. Prospects improved by the clearing up of the weather. *Rabi* harvest well advanced and about seven-eighths of the opium crop collected. Opium is expected to be a 14-anna crop, but with an undue proportion of *pasewa* in consequence of the wet weather. Sugarcane planting progressing. Common rice sells at 13 to 14 seers per rupee. Water and fodder-supply sufficient.
	34	Shahabad „ 25, '93 Buxar ... Sasaram ...	0·09 0·20 0·59	Fine clear weather with strong westerly winds. The *rabi* harvest is now in full swing. Pulses and oilseeds are being gathered, and wheat, barley and oats cut. The weather is favourable, and where no damage by hail has occurred the returns will be fully up to the average. Prices are still high. Fodder and water abundant.
	35	Darbhanga „ 25, '93 Samastipur ...	0·10 0·12	Weather—getting warm. *Rabi* harvest in progress. Indigo sowing almost finished. Paddy and *mung* being sown. The rainfall of the week did considerable injury to mango blossoms. Collection of opium in progress. Condition of cattle good. Prices remain stationary.
	36	Muzaffarpur „ 18, '93 Hajipur ... Sitamarhi ...	Nil Nil Nil	Weather—seasonable. Harvesting of the *rabi* crops progressing. Collection of opium fast drawing to a close. Weather favourable. No disease among cattle. Fodder and water plentiful.

No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
	BIHAR—*concld.*		
	Patna Division—concld.		
37	Saran Mar. 25, '93 Siwan .. Gopalganj ..	0·89 0·07 0·28	Weather—early in the week cloudy with local showers and an extraordinary hailstorm on 20th instant at Revelganj, Chapra and neighbouring places which greatly damaged cereals, castor and mango blossoms. Last few days fine with west wind and very cool nights. *Rabi* harvest rapidly proceeding. In Gopalganj and Siwan outturn expected to be good as a rule. In Sadar subdivision the hailstorm has caused much damage along its track. Indigo has suffered from rain or hail, necessitating resowing. Opium operations practically closed with fair results. Fodder and water ample. Prices of common rice:— Srs. c. Chapra ... ... 13 8 } Siwan ... ... 13 2 } per rupee. Gopalganj ... ... 13 6 }
38	Champaran ,, 25, '93	0·11	Weather—clear and getting warm. *Rabi* harvest commenced in places. Paddy and *china* being sown. Opium collections making good progress; about 12 annas collected. No marked change in prices of food-grains. No cattle-disease. Fodder and water sufficient.
	ORISSA.		
	Orissa Divn.		
39	Cuttack ,, 25, '93	0·19	Weather—warm. Outturn of tobacco estimated at 14 to 16 annas. Supply of fodder and water sufficient. Price of common rice stationary.
40	Puri ,, 23, '93 Khurda ... Banpur ...	Nil Nil 0·90	Weather—cloudy with drizzling rain. Lands are being ploughed for the ensuing *sarad* crop. *Dalua* paddy ripening. Prices of rice stationary.
41	Balasore ,, 25, '93	1·32	Weather—stormy. Very few crops on the ground. Cases of cattle-disease reported in the centre and north of the district. Prices high but stationary.
	CHOTA NAGPUR.		
	South-West Frontier Agency.		
	Chota Nagpur Divn.		
42	Hazaribagh Mar. 25, '93 Giridi ...	Nil 0·43	Weather—bright; cool for the time of the year. *Rabi* crops being harvested; 8 to 12 annas outturn expected. Opium nearly all got in; yield expected to come up to estimate. Prospects of *mahua* and mango somewhat improved. Common rice 12 to 14 seers per rupee. Fodder and water sufficient.
43	Lohardaga ,, 25, '93	1·31	Weather—seasonable. Ploughing continues. The heavy fall of rain and hail caused some damage to standing crops (*rahar*, wheat and barley). Common rice is selling at 13 seers per rupee. Fodder and water plentiful.
44	Palamau ,, 24, '93	0·08	Weather—seasonable. The weather has apparently cleared up. Hail in some parts, which has damaged the *rabi* crops and the *mahua* and mango blossoms. *Rabi* harvest has commenced. Foot-and-mouth disease amongst cattle. Prices rising.
45	Singhbhum ,, 25, '93	1·12	Weather—stormy and wet at beginning of week, but bright and quite cool now (25th). What *rabi* there is is doing well. Mango and *mahua* have suffered considerably. Cattle-disease reported from some villages in Bharagora outpost jurisdiction. Water and fodder plentiful.
46	Manbhum ,, 25, '93 Gobindpur ...	1·32 0·54	Weather—getting warmer. Mango and *mahua* damaged, as reported last week; extent of damage not known yet. Rice selling at from 10 to 13 seers per rupee. Fodder and water-supply sufficient.

Published for general information.

* Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period
The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 01
rain fall the normal mean are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station
district, *i.e.*, from total rainfall at the subdivisional stations in the district sending in returns divided by the number of stations. A rainy day is one or

for the week ending Saturday, the 25th of March 1893.

Variation from normal mean.	Mean 8 A.M. temperature.	Average humidity at 8 A.M.	Average cloud amount at 8 A.M.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. Of week. Mean for district.	Normal mean.	Average number of rainy days.	Normal number of rainy days.	Rainfall. Since 1st of month. Mean for district.	Normal mean.	Variation.	Since 16th October 1892. Mean for district.	Normal mean.	Variation.	District.

Explanation.—... indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·10 inch of rain has fallen.

CALCUTTA, *the 28th March* 1893.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 25TH OF MARCH 1893.

DURING the previous week a continuous and rather rapid fall of pressure had occurred, and the distribution had completely changed from what it had previously been, and at the close of the week pressure was low over the western and north-western parts of the province, and comparatively high in South-East Bengal, and on the whole the distribution resembled that which usually obtains in the hot weather months. On the 19th pressure had risen slowly at the western stations, and fallen over the remainder of the province, but generally over Northern India the pressure changes were irregular, and a feeble area of low pressure existed in North-West India near the hills. This pointed to the existence of rather disturbed conditions over the whole of Northern India, and on this day a number of local hot weather storms or nor'-westers occurred in all districts of Bengal except Orissa, the rainfall from which was rather heavy, and was reported on the morning of the 20th. From the 19th to the 20th pressure began to fall at all except a few of the south-eastern stations, the fall being brisk in Bihar, while at the same time a barometric depression had appeared in Chota Nagpur, South Bihar and the neighbouring districts of the North-West Provinces. Again, therefore, conditions continued disturbed, and numerous local storms occurred in Bengal, and on the morning of 21st the majority of stations, except in Orissa and parts of Bihar, reported rain. On the 21st the low pressure area had apparently advanced slowly in an easterly direction, and a very shallow depression covered the western half of the province. Hence again conditions remained very disturbed in Bengal; local storms continued numerous, and a large number of stations reported rainfall on the 22nd. From the 21st to the 22nd the shallow depression had again advanced in an easterly direction, partially filling up in its advance, and two feeble residual low pressure areas existed, one in Orissa and one in North Bengal and Assam. The disturbed conditions therefore still existed in Bengal, and numerous local storms occurred, and on the morning of the 23rd rainfall was again reported in Orissa, South-West Bengal and East Bengal, though the remainder of the province had become almost rainless. On the morning of the 23rd, however, a rather rapid increase of pressure had taken place over the whole province, and the residual low pressure areas, which had existed on the 22nd, had disappeared, though the actual pressure recorded over the province was still in moderate defect of the normal. With the disappearance of the actual depressions, however, weather immediately began to improve, the sky rapidly cleared, a dry north-westerly and westerly wind current set in over the whole province, and rainfall entirely ceased. A further moderate increase of pressure took place on the 24th, which made pressure in excess of the normal of the day at almost all stations, while again on the 25th a further moderate increase of pressure took place, and it became in excess of the normal by amounts ranging up to nearly a tenth of an inch in the west of Bihar, and pressure became very uniform over the whole province, while over the greater part of Bengal a dry westerly wind current was blowing. The first half of the week was therefore stormy and wet with rather heavily clouded skies, and the second half fine and dry and with almost cloudless skies, but throughout the week temperature has again been much below the normal for the period.

Pressure—Has been very decidedly low for a considerable part of the week, and hence the mean pressure has been in distinct defect of the normal. This defect has usually equalled from 0·05″ to 0·07,″ and it has been fairly uniform over the whole province.

Temperature.—Owing to the rather heavy rainfall in the first half of the week and to the cool dry north-westerly and westerly wind which was blowing for the last three days of the week, temperature has again been largely in defect of the normal. Indeed on the morning of the 25th the mean temperature reported was from about 8° to 11° below the normal of the day. Hence for the whole week the mean temperature has been in defect of the normal, the defect equalling about 5°, while in South Bihar and Chota Nagpur it has equalled 6°.

The distribution of temperature for the week and its variation from the normal value are best seen in the table below, where the average maximum, minimum and mean temperatures for the week at nine typical stations in different districts of the province are compared with the normal values for the period. The defect during the week, it will again be seen, has been considerably larger in the day than in the night temperatures :—

Table showing the excess or defect of the actual mean temperature from the normal for the week ending 25*th March* 1893.

	Normal mean maximum temperature for the week ending 25th March.	Actual mean maximum temperature for the week ending 25th March 1893.	Variation of actual mean from the normal.	Normal mean minimum temperature for the week ending 25th March.	Actual mean minimum temperature for the week ending 25th March 1893.	Variation of actual mean from the normal.	Normal mean daily temperature for the week ending 25th March.	Actual mean daily temperature for the week ending 25th March 1893.	Variation of actual mean from the normal.

Rainfall.—The rainfall during the week has again been heavy. It has averaged nearly three inches in East Bengal, one inch and-a-half in South-West Bengal, about one inch in Orissa and North Bengal, about half an inch in Chota Nagpur and South Bihar, and only a quarter of an inch in North Bihar. In all divisions of the province, however, the falls have been rather largely in excess of the normal.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 25th of March 1893 :—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th Oct. 1892.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week	Variation.	Average.	Normal average.	Average.	Normal average.

The total fall from 1st January to 25th March 1893	6·85
The average fall of the corresponding period for 24 years, S.-G.'s Office ...	2·69

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h, 10h, 16h and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; t, thunder; <, lightning; /, strong wind; ▲, dew; p, passing temporary showers; d, drizzling rain.

N.B.—In the weekly report from 5th to 11th March 1893 read " 66·0 " for " 6·60 " as the mean wet bulb of the 10th March 1893.

CONTENTS.

Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal assembled for the purpose of making Laws and Regulations under the provisions of the Act of Parliament, 24 and 25 Vic., Cap. 67.

The Council met at the Council Chamber on Saturday, the 1st April, 1893.

Present:

The HON'BLE SIR CHARLES ALFRED ELLIOTT, K.C.S.I., Lieutenant-Governor of Bengal, *presiding*.
The HON'BLE SIR CHARLES PAUL, K.C.I.E., *Advocate-General.*
The HON'BLE T. T. ALLEN.
The HON'BLE H. J. S. COTTON, C.S.I.
The HON'BLE H. H. RISLEY, C.I.E.
The HON'BLE J. LAMBERT, C.I.E.
The HON'BLE DR. MAHENDRA LAL SIRCAR, C.I.E.
The HON'BLE A. H. WALLIS.
The HON'BLE GONESH CHUNDER CHUNDER.
The HON'BLE P. PLAYFAIR.
The HON'BLE MAULVI SYED FAZL IMAM, KHAN BAHADUR.

NATURAL DRAINAGE OF VILLAGES.

In the absence of the Hon'ble Dr. Mahendra Lal Sircar, who came late and who had given notice of the question, the Hon'ble BABU GONESH CHUNDER CHUNDER enquired whether Government is aware that the water-mains of the Calcutta Corporation, which have been laid along the Barrackpore Trunk Road,

have materially obstructed the drainage of the villages to the east of the Road, by passing through several bridges over the water-courses, which cross the road from the east to the west in the manner shown in the accompanying rough sketch of two of the bridges named therein and thus causing permanent saturation with water of the soil on both sides of the road, have aggravated the malarial condition of the villages? And that in view of the importance of the subject, whether Government is prepared to order the necessary enquiries with the object of finding and carrying out of any remedial measure or measures other than that adopted by the Corporation, namely, that of deepening the channels of the water-courses at the places crossed by the mains, and which has proved ineffectual owing to the rapid silting up of these excavations?

The Hon'ble MR. RISLEY replied as follows:—"In reply to the Hon'ble Dr. Mahendra Lal Sircar's question, I have to say that two reports have been received by Government which touched on the state of things complained of. The Sanitary Commissioner, Dr. Gregg, submitted a report, dated the 21st January, 1890, on the drainage, water-supply and conservancy arrangements of the group of small municipalities surrounding Calcutta on the north and east, in which he attributed the main evils from which this tract of country suffered to obstructions set up by the agricultural population impeding the natural flow of the streams and drainage channels. He also remarked, in discussing a scheme for opening up the Bagjala khal, that 'the syphons passing under the main pipes of the Calcutta Water-works do not, I understand, work properly owing to their becoming silted up occasionally, and at such times obstructing the free flow of drainage through them. These syphons should never be allowed to become silted up, even temporarily.' The memorandum in questioned was reviewed by Government in the Municipal Resolution of the 7th February, 1890, and was transferred to the Sanitary Board for further consideration and action. The other paper which Government has received was a Note by Babu Dakhina Ranjan Mukerji on the insanitary condition of the Baranagore Municipality, in which he referred to the material, though partial, blocking of the culverts in the Barrackpore Road by the construction of the Calcutta Water-works. In both these reports, the reference to this particular obstruction occupied a very subordinate place, and the larger proposals respecting compulsory drainage and excavation of old silted-up channels have been pending until some legal powers should be acquired by Government to intervene in such cases. When sanction was given by Government to lay the Calcutta main, it was required that the area of the drainage openings in the road should not be diminished, and it is believed that this condition has been fulfilled. The Government is not aware that the crossings provided have deteriorated or silted up, but enquiries will be made on this point, and if the statement communicated by the hon'ble member is found to be correct, the local authorities will be enjoined to restore matters to a proper state."

LICENSED WAREHOUSE AND FIRE-BRIGADE BILL.

The Hon'ble MR. COTTON moved that the clauses of the Bill for the regulation of Warehouses and the maintenance of a Fire-brigade be further considered for settlement in the form recommended by the Select Committee.

The Motion was put and agreed to.

The Hon'ble MR. COTTON said:—"The amendment which stands in my name is of a verbal character, but, in effect, it makes clear the intention of section 9 of the Bill. Under section 9, with the consent of the Chairman of the Commissioners, any Special Committee whom the Commissioners in meeting shall on that behalf appoint may exercise the powers and the discretion vested by the Act in the Chairman of the Commissioners. The particular point of my amendment is to enable the Special Committee to exercise not only the powers but all or any of the powers of the Chairman. It is desirable that this matter should be made quite clear, as there are certain powers in the way of granting licenses for warehouses which can undoubtedly much more conveniently be exercised by the Chairman in his executive capacity, and which need not be transferred to the Committee; such, for instance, as the large numbers of licenses which would be granted for warehouses for hay, straw, wood and the like. The granting or withholding of such licenses raise no question of any importance or consideration: they are purely executive matters, and it is obviously undesirable that the power of granting or withholding such licenses should be delegated to a Committee. They are powers which the Chairman

now deals with in practice, and it is convenient that this practice should continue. The proposed amendment makes it quite clear that the powers and discretion, which may be delegated to a Committee appointed under this section, may be limited to the exercise of the particular powers relating to important warehouses, such as jute warehouses and the like, or they may, if the Commissioners so decide, be general in their character. To avoid any misunderstanding, it is desirable that the clause should distinctly lay down that all or any of the powers of the Chairman may be delegated. I, therefore, move that in section 9, before the words 'the powers' the words 'all or any of' be inserted."

The Hon'ble Sir Charles Paul said:—"I should have thought this amendment to be unnecessary. According to the interpretation of statutes, words in the plural number include the singular. I have no objection to the passing of the amendment, if the Hon'ble Member in charge of the Bill thinks it necessary."

The Hon'ble Mr. Allen said:—"It appears to me that the definite article used in section 9 of the Bill before the words 'powers and discretion vested in the Chairman of the Commissioners' refers to the powers conferred by the sections preceding and are limited to those powers. A subsequent section (12) imposes on the Chairman of the Commissioners other duties, and I do not understand whether the hon'ble member intends that the Committee shall exercise those powers under section 12 or shall be capable of exercising them, as well as the mere power and discretion vested for granting or withholding licenses. If the definite article is cut out of section 9 and the words 'all or any of' are introduced, clearly they will refer to all the powers given to the Chairman of the Commissioners throughout the whole Act, and possibly the adoption of this amendment may go further than the hon'ble member intends. I understand he has no intention to extend the delegation of authority to the Committee beyond the powers and discretion which refer to the granting of licenses. There might be some inconvenience in allowing the Committee to take action under section 12."

The Hon'ble the President said:—"I think the remark made by the learned Advocate-General that the words proposed to be inserted in section 9, though possibly unnecessary, can do no harm would justify us in including those words, because if they can do no harm, they may just as well be put in. There was a case quite recently—a very important case—in which the absence of those or similar words had the effect of completely vitiating the intention of the Legislature in an Act which was passed, and tied down the hands of the executive in a way which was not intended. It certainly appears to me that the words 'the powers under this Act' might include all the powers conferred under any part of the Act, and would not confine the delegation to the powers referred to in the section previous to section 9. And though the Legal Remembrancer objects that it might cause inconvenience if all the powers of the Chairman were to be exercised by the Committee, I may point out that we are merely putting the power of delegation in the hands of the Chairman, and we may rely on his exercising it in a way which will be judicious and convenient. I therefore think we can hardly do wrong in acceding to the amendment which has been proposed."

The Motion was put and agreed to.

The Hon'ble Mr. Cotton moved that the Bill for the licensing of Warehouses and the maintenance of a Fire-brigade, as settled in Council, be passed. He said:—"This Bill, after having been the subject of very considerable discussion, both in this Council and outside of it, and after having been subjected to lively opposition from extreme points of view, has at length passed between Scylla and Charybdis and arrived in port. It is only necessary for me, I think, to make one remark on this occasion, and that is, to express the obligations of the Council to the Hon'ble Mr. Woodroffe, who has vacated his seat since the Advocate-General has returned from leave, for the most valuable services which he has rendered both in the Select Committee and in this Council, in preparing the clauses of this Bill. The lion's share of the work undoubtedly fell to him, and I am sure I am no more than expressing the general opinion of the Council when I say, that we are much indebted to him for the trouble he took over this matter."

The Motion was put and also agreed to.

The Hon'ble Mr. Playfair said :—"The Bengal Provincial Services estimate has been in the hands of hon'ble members for several days, but being a mere statement of balances it is not self-explanatory, and I would venture to suggest that, in future years, it might suit the convenience of members were the Budget and the official statement by the Hon'ble Member in charge of the Budget, presented at one meeting of the Council to be brought forward for discussion at a subsequent meeting of the Council.

"Taking the estimates of receipts and expenditure for the coming year, it is in the first place to be observed that the Government of India has reduced the income estimated by the Local Government by the sum of Rs. 1,85,000, and has likewise reduced the estimated expenditure by Rs. 62,000, which alterations raise the estimated deficiency for the year from the sum of Rs. 51,000, estimated by the Local Government, to the sum of Rs. 1,74,000, estimated by the Government of India. And it naturally occurs to me to enquire whether the expenditure of the year could not be limited to the sum of Rs. 4,24,04,000 scheduled by the Supreme Government, and whether the income of Rs. 4,24,15,000, as estimated by the Local Government, could not be retained, in which case there would practically be equilibrium between income and expenditure. Under the Heading of Railways, the Government of India has docked the income estimated by the Government of Bengal by 1½ lakhs of rupees, which in itself goes far to account for the estimated deficiency for the year 1893-94, and it will be interesting to know if there is any likelihood of this further receipt being obtained from this source.

"Turning to details of the estimate for the coming year 1893-94, the Hon'ble Member in charge of the Budget has explained the reduction effected under the heading 'Salt.' I should like to enquire whether the expenditure of Rs. 5,52,000 under 'Customs'—heading No. 9 of the statement—includes the cost of collecting the salt revenue, which income, I understand, is passed to the credit of the Imperial Government; and if so, whether Bengal gets credit for any portion of this cost from neighbouring provinces to which a portion of the salt passes, or from the Government of India on their behalf. Receipts under heading XII show that Rs. 1,82,000 is received on account of interest which, if taken to result from money advanced at 5 per cent., represents a capital of Rs. 36,40,000, which is not a large sum for this vast province. It would be interesting to know whether any portion of this represents loans to public bodies in Calcutta, or whether the money is lent wholly to bodies in the mufassal. The next heading to which I would direct attention is number XVI, under which Courts of Law are estimated to produce an income of Rs. 8,76,000. It has been reported that the accounts of the Calcutta Small Cause Court for the past year show a surplus approaching Rs. 1,60,000, and I beg leave to enquire if this revenue is included in the sum of Rs. 8,76,000. Turning to the other side of the estimates, it will be seen that the expenditure under Courts of Law is placed at Rs. 85,28,000, and it would be interesting to learn what portion of the revenue from stamps, estimated at Rs. 1,17,75,000, may be considered as a credit against this debit.

"I come now to the important heading entitled 'Eastern Bengal State Railway system,' showing an estimated receipt of Rs. 32,12,000 for the year 1892-93, and a receipt of Rs. 33,50,000, estimated by the Local Government, and, as I have already pointed out, amended by the Government of India to Rs. 32,00,000 for the coming year 1893-94. This is apparently a net receipt, for the expenditure column under the heading 'Railways' includes the nominal charge of only Rs 1,000. In the first place, I would venture to enquire whether this profit is arrived at after paying any interest on capital, and whether it is the whole profit of the year. Secondly, whether the reduction of one-and-a-half lakh by the Government of India on the estimated income of Rs. 33,50,000 made by the Local Government represents a reduction in tariff rates, or does it imply an increase in expenditure? It is to be hoped that the Government of India may in the near future take such action as will solve the difficulties arising from the depreciated value of silver, and that attention will be devoted forthwith to the wants of the internal trade of the country which is meanwhile suffering, and that the Local Government will, in future, desire to obtain an income from railway traffic carried in quantity at low rates rather than from a restricted traffic transported at high rates. It will be within the recollection of hon'ble members of this Council that the Government of India took over the Eastern Bengal Railway from a Company, and that Colonel Conway Gordon, who was appointed Manager, stated before a Select Committee of the House of Commons that one of the reasons for Government doing so was to protect the public from the excessive tariffs charged by the Company; it will also be remembered that the rates were lowered to the great

advantage of trade, and especially of the jute trade, during Colonel Conway Gordon's incumbency; that these were restored to the tariff of the old Company, and that although the tariff has again been modified the undertaking earns an income approaching 7 per cent. on a capital far in excess of that of the original capital of the Company. It has recently been stated in this Council that this is an expensive port, and I earnestly hope that the time will soon arrive when this Government will take into serious consideration the charge upon crops from the field to the 'tween decks of vessels lying in the port, and endeavour to lessen the present cost. And in this connection I venture now to ask whether the Local Government is in favour of the extension of the Bengal Central Railway through Singhia to Madaripore to tap the large jute-growing district, and place Calcutta in direct communication with the Chandpore terminus of the Bengal-Assam Railway, and whether the Local Government will represent to the Government of India the necessity for the construction of this section, if it has not already done so.

"I observe that the expenditure under the heading 'Irrigation' is estimated to be Rs. 30,26,000 over receipts; that the charge for interest alone, amounting to Rs. 24,48,000, is greater than the whole income of the department placed at Rs. 23,82,000. It would be interesting to have an explanation of the real value of this expenditure.

"The last entry under the heading of 'Contributions', placed in the expenditure column by the Government of India at Rs. 10,00,000, being Rs. 1½ lakhs below the sum budgeted by the Local Government, is not self-explanatory, and I beg leave to enquire to whom are those contributions made, and is it at all possible that this expenditure may be further reduced?

"Under the heading of 'Excise' the Hon'ble Member in charge of the Budget refers to the enhanced fee for wholesale licenses, which he states, has been raised from Rs. 50 to Rs. 600 a year. I shall be glad to know that the latter sum should be stated to be Rs. 300, as notified in the Gazette. He also observes that changes have been made in the duties on retail licenses, and I beg leave to enquire whether the Government will give further consideration to the letter addressed by the Secretary to the Calcutta Wine, Spirit and Beer Association to the Secretary, Board of Revenue, under date the 2nd of March, 1893, in which it is urged that a very great hardship will be inflicted upon retailers by the enhancement of the annual license fee from Rs. 600 to Rs. 1,000 per annum."

The Hon'ble MR. RISLEY said:—"I will now do my best to reply to the questions of the hon'ble member, so far as they arise out of the budget figures before us and involve points of finance only. I am, however, not prepared to deal with the larger questions of administration which the hon'ble member's remarks incidentally raise, and some of which concern the Imperial rather than the Provincial Government.

"*First*, I may say that there appears to be no *primâ facie* objection to the proposal that the financial review should be presented in future years in much the same form as it has assumed to-day, except, of course, that it will not in future be necessary to go into matters of history, and the review will therefore be much shorter. With that exception, the review will take much the same shape as it has taken to-day, and there should be no difficulty in presenting it with other explanatory papers in time to admit of the review being read one week and the discussion on it taking place in the following week. There can be no doubt that it would very materially facilitate discussion upon questions which may arise. In that case, however, I should wish to add that the task of replying impromptu to questions which may arise on the budget will not be an easy one. If the statement is circulated beforehand in the manner proposed, I think it will be a matter for consideration whether some notice, formal or informal, should not be given; otherwise it seems to me that any hon'ble member with a turn for propounding financial conundrums will have it in his power to embarrass the Financial Secretary by asking questions to which he will be unable to reply. At the same time it would, I think, be convenient to give more detailed figures showing the sub-heads subordinate to the major heads, without which the figures of the budget must always be difficult to follow.

"Turning now to the details of the budget, as far as I could follow the hon'ble member, I may explain under the head of 'Salt' that the allotment of Rs. 1,20,000 shown in 1892-93 includes the sum of Rs. 75,000 paid to Mr. Kilby as his honorarium for inventing a most useful salt-weighing machine, and also Rs. 20,000 for improvements in the Salt Golahs at Sulkea, including a railway siding, &c., and also certain pontoons and appliances to facilitate the

landing of salt, as against Rs. 10,000 put down for the same purpose in the current year. Rs. 31,000 may be taken to represent the normal expenditure of the Salt Department. The income of Rs. 90,000 is mostly derived from salt bonded in warehouses. The income from rents of warehouses tends to decline, owing to a great change which has taken place in the salt trade. Instead of coming in sailing ships and being kept a long time in bond, salt is now imported in steamers and is left only a short time in warehouses, and the Provincial revenues do not get so much in the way of rent as hitherto. No doubt it may be said that the customs revenue gains by this change; but while the Imperial revenue gains, the Provincial revenue loses to some extent.

"Then with regard to 'Customs'. The hon'ble member remarks upon the sum of Rs. 35,52,000, which includes the cost of collecting the tax on salt. As this duty belongs solely to the Imperial revenues, the Government of Bengal gets no credit from the Government of India, except so far as the customs establishment is included in the lump sum assigned by the Government of India for provincial purposes.

"Under the head of 'Interest', the sum of Rs. 1,84,000 is made up of the following items:—Interest on educational securities, Rs. 14,000; interest on arrears of public works cess, Rs. 45,000; miscellaneous interest, Rs. 2,000, and a large sum (Rs. 1,23,000) on loans under the Local Authorities Loan Act of 1879, which enables the Local Government to lend money to local bodies, and loans to cultivators, &c., and to people who want it for purposes of irrigation and cultivation on the security of their crops. That makes up by far the larger portion of the sum. A very large portion of this is granted by the Government under the Act for dealing with the water-logged portions of the country round about Calcutta, and the peculiarity of this Statute is, that the interest is not payable in such cases until the project is complete. One large project of this kind is now being carried—the Rajapur drainage scheme—and the interest will not be collected till the scheme is complete. These loans do not include any sums lent to the Municipal Corporation of Calcutta, or the Calcutta Port Commissioners, which are included in the Imperial accounts.

"Law and Justice cost Rs. 8,76,000. I may explain that this head includes only the cash receipts of the Small Cause Courts, that is to say, fees, forfeitures, &c. The Small Cause Court receipts on court-fee stamps appear under the head of 'Stamps'. It comes then to this: that we do not separate Small Cause Court receipts from other judicial receipts, and in order to make up any sort of profit and loss account, it would be necessary to have separate accounts made up. I am not in a position to say now whether we shall be able to do that or not; but at any rate, part of the receipts come under two or three or more heads of Law and Justice, and under various minor receipts under the head of Stamps; so that under these figures, as they stand, it is impossible to say precisely what the receipts from the Small Cause Court are.

"Under the head of 'Stamps', the total receipts are 157 lakhs, of which the Provincial Government gets three-fourths. Out of this, 113 lakhs represent the receipts from court-fee stamps and 44 lakhs from what are called 'general stamps', being the large sheets of paper with an engraved stamp at the top upon which legal documents are executed. In consideration of getting three-fourths of these receipts, the Provincial revenues are required to bear the whole cost of maintaining the judicial establishments which, as the statement shows, enormously exceed the receipts under the head of 'Courts of Law'.

"Under 'Marine' I have already mentioned that the estimate of Rs. 10,37,600 includes Rs. 1,50,000 for the cost of a new pilot-vessel to replace the *Coleroon*, and it also includes the cost of bringing the vessel round from Bombay, and so forth. Marine receipts vary, of course, with the tonnage of vessels visiting Calcutta.

"Under the head of 'Railway Receipts' the entry of 32 lakhs represents half the net receipts after paying the working expenses. All the interest charges are met by the Government of India and do not appear in the Provincial accounts.

"Under the head of 'Irrigation', I should explain that the origin of these works really goes back to the time of the Orissa famine. That history is given at length in the second part of this review, and it will show why it is that the receipts do not cover the charges for interest. I may further explain that there are two kinds of irrigation works—major works for which a capital account is kept, and on the capital outlay for which interest is charged, and minor works for which no interest is charged. The receipts from the major works are called direct receipts, and they consist of navigation receipts, water-rates, rents, &c. The receipts from the minor works consist of rents from surplus lands.

"Under the head of 'Contributions', the account is somewhat puzzling. Our contribution to the necessities of the Imperial Government is shown under

the head of 'Land Revenue Adjustments', amounting to Rs. 14,39,000, which is reduced by certain sets-off to Rs. 13,50,000, as shown there. But the contribution amounting to 10 lakhs on the expenditure side of the account, to which allusion has been made, represents for the most part grants to District Boards for the maintenance of schools, ferries, pounds, dispensaries, &c., made over to their charge This is done under the Local Self-Government Act, III of 1885, which gives extensive powers for making over the administration of these matters to District Boards. The principle on which these arrangements are worked out, and out of which these charges for contribution arise, is this: certain revenues are made over to the District Boards with a stated income as compared to so much expenditure, and we get out a certain excess expenditure which was calculated in 1886, and then the Government gave them a sufficient grant to bring them into a state of equilibrium. We deal with them in the same way as the Government of India deals with us; and these 10 lakhs represent those grants. Within the last two years or so, these contributions have been increased. Not only have more roads been made over to them with corresponding grants, but also certain provincial buildings, and that has enabled the Government to effect certain economies in the way of dispensing with Public Works establishment. The deficit of Rs. 1,74,000, I may explain, will be met from the accumulated balance, which stands to the credit of the Provincial Government.

"I think the explanations I have given have covered most of the points to which the hon'ble member drew attention. There is only one more point, as regards excise licenses, upon which I think I made a mistake in stating that it is proposed to raise it from Rs. 50 to Rs. 600. I should have said Rs. 300 a year. I may add that a grievance relating to the legal definition of 'a dozen,' brought to notice by Messrs. Cutler, Palmer & Co., has been referred to the Government of India, and legislation may have to be undertaken."

The Hon'ble THE PRESIDENT said:—"I think, short as the discussion has been, it has brought out two points pretty clearly. One of these points is, that we must make an endeavour, in future years, to present the Financial Statement at an earlier period and must put our accounts in a fuller form. The form in which the accounts have been put before the Council on this occasion gives only the receipts and expenditure under the major heads. I have no doubt that it will not be difficult to have the statement of accounts drawn up so as to show the receipts and expenditure under all the sub-heads of account, so that they shall contain a good deal of information which will avoid the necessity of asking questions in Council, and will also assist Hon'ble Members, while discussing them, in defining more clearly what the particular point is on which information is desired.

"There has been no desire on the part of the Government to press or to hurry on this discussion to the inconvenience of anybody. As you are aware, the Council was summoned for last Saturday, and I put it off to to-day, in order that more time might be afforded for the circulation and perusal and study of the Financial Statement. There was a miscalculation as to the amount of time that would be required. We thought there would have been ample time; and it was not seen, this being the first occasion on which discussion has taken place, that although the figures were presented to hon'ble members a week ago, the explanatory statement could hardly have been drawn up so soon. In future, I trust this difficulty will be removed.

"The second point is that to which the Hon'ble Mr. Risley drew attention, namely, the difficulty which the Financial Member of Council will always experience if he is expected to answer questions arising out of the multifarious and complicated detail of the provincial accounts, such as those which the Hon'ble Mr. Playfair has put. In the Rules which relate to the working of the new Council, it is expressly laid down that interpellations which require answers should be presented a certain number of days beforehand, so that the answer might be prepared with accuracy. No such provision has been made with regard to financial questions. I suggest that we should follow the same practice which obtains in what I may call in parliamentary language 'another place', that any hon'ble member who intends to ask questions or to discuss a particular point in connection with the budget, should send intimation beforehand to the Secretary of the Council or to the Member in charge of the Department concerned, so that he might be prepared to give the information which may be required, although, according to the Rules, no particular period of time is fixed for sending such intimation beforehand and for preparing the answers.

"I think the Hon'ble Mr. Risley has answered all the points of the Hon'ble Mr. Playfair's interpellations except one, and that is, with regard to the extension of the Central Bengal Railway. This is a matter in which the Bengal Government has taken considerable interest, and the year before last I expressly arranged a part of my tour during the rains, so as to visit those parts and get first-hand information, in order to ascertain how far the railway could compete with water-carriage. This has always been a point of difficulty with regard to the projects in the Eastern districts of Bengal. When the Bengal Central Railway to Khulna was first projected, it was assumed that a very large traffic might be calculated upon if the Railway carried the surplus of production of the Jessore and Khulna districts. We all know that it did not gather up that traffic, or anything like it. Water navigation competed successfully with it, and for a long time the Bengal Central Railway produced hardly any net earnings at all. It had to go to the Government of India *in formâ pauperis* and get a guarantee given to it, and it is only within the last two or three years that it has began to earn that guarantee, or something more than it. Of course the difficulty of the Government of India in considering any project of extension is this : they say, you ask us to sanction the extension of the Railway to Madaripur or any other part of the country, as the case may be ; will you not be encountering the same competition and the same financial difficulty as in the case of the first opening to Khulna? The conclusions to which I came was this, that there will always remain competition with the water traffic ; but the water route in that part of the country is so circuitous and so difficult that there is good reason to think that the Railway will be able to compete successfully with it. If it is open to Madaripur, it will attract a large quantity of traffic, especially jute traffic, while it will not, to any considerable extent, rob the parent line at Goalundo of the traffic which it already possesses. It is all very well to say that a new line will take up a certain traffic, but if we are already carrying off that traffic by another route, we should lose in one hand what we gain by another; the projectors must show that there is new traffic to be got, and must not deprive the old line of the traffic which it now possesses. It is on these grounds that the Bengal Government sent up its report to the Government of India with regard to the Madaripur extension in September or October, 1891. Since then we have had a little dropping correspondence from time to time, but we have been met with the usual difficulty that, however much the Government of India may accept our arguments and our calculations, yet funds are wanting before that extension can be carried out. They have so many urgent and important schemes before them, relating to the opening up of partial communications throughout the whole Empire of India, that they are not able to afford funds for this particular local extension. At present, then, it stands in this way : that on the whole it is favourably considered, but it is lying over for want of funds till other projects which are considered more urgent have been completed, and then it takes its place in the front rank.

"It now only remains for me to announce that the Council is adjourned *sine die*, and in doing so, I will draw attention briefly to the fact that this is the last occasion on which the Bengal Council meet in the same condition in which it has met for the last twenty-six years or thereabouts. The next meeting will, I hope, be a meeting of the enlarged Council, which cannot naturally be called together under a space of about two months. I hope it may be found possible for that Council to meet in July and August and take in hand the Bengal Municipal Bill, which the Select Committee has been working at so diligently and so usefully during the past few months. We all have great hopes that increased efficiency and increased good to the country will arise from a larger representation of the interests which exist in this enormous Province. But I am sure I may honestly and sincerely say that the Government cannot hope to have greater help and more loyal devotion to the public weal in that Council than they have received from the Council which I am now addressing for the last time."

The Council anjourned *sine die.*

C. H. REILY,

Assistant Secretary to the Govt. of Bengal,
Legislative Department.

CALCUTTA;
The 4th April, 1893.

FINANCIAL REVIEW FOR BENGAL.

Published for general information.

PART I.

The origin of Provincial Finance, and the Budget for 1893-94.

In laying before the Council the first Provincial Financial Review, I propose, with the permission of the President, to explain as briefly as possible how the system of Provincial Finance came to be introduced, and the main differences which distinguish it from the centralised financial system which it displaced. An attempt will then be made to compare Provincial Finance as understood in India with the cognate systems of Federal Finance as practised in the German Empire and the American Commonwealth. Finally I shall explain the most prominent and characteristic features of the Budget of the year 1893-94. In order to save the time of the Council, which has other business to transact, the full account of the working and results of the Provincial system has been included in the second part of this Review, which I do not propose to read to you now, though it will be published in the Gazette for the information of the public.

2. A high authority has stated that it was not until after the Mutiny in 1857 that anything deserving the name of systematic finance was introduced into India. The era of administrative development and opening up of the country which then set in gave rise to heavy expenditure in all directions, and a system of strict financial control became indispensable. In the first instance this control was necessarily vested in the Government of India, and was, as Sir John Strachey points out, of a severely repressive character. From the time of the Mutiny to the year 1871-72, when the system of Provincial Finance was brought into working, the Local Governments possessed no powers of financial control, and had no financial responsibility. The Supreme Government administered the minutest details of the public expenditure. Without its authority no official, however small his salary, could be employed at the cost of public funds, and even district roads and buildings and local works of improvement were hampered by the same onerous conditions.

3. The evils of applying this highly centralised system to an area so heterogeneous in respect of its physical conditions and the character of its inhabitants as the continent of India, became more and more apparent as time went on. As long ago as 1861-62 Mr. Laing laid stress in his Financial Statement on the defects of the then existing system:—

> 'If this great empire is ever to have the roads, the schools, the local police, and other instruments of civilisation which a flourishing country ought to possess, it is simply impossible that the Imperial Government can find either the money or the management. The mere repair of the roads, where anything like a sufficiency of good roads has been made, is a matter altogether beyond the reach of any central bureau. It is of the first importance to break through the habit of keeping everything in dependence on Calcutta, and to teach people not to look to the Government for things which they can do far better for themselves. . . .
>
> It is most desirable to break through the system of barren uniformity and pedantic centralisation, which has tended in times past to reduce all India to dependence on the bureaus of Calcutta, and to give to Local Governments the power and the responsibility of managing their own local affairs. The great branches of the expenditure, such as the army and national debt, are imperial; and while this is the case, the great branches of revenue must remain imperial also. But there is a wide field, both of revenue and expenditure, which is properly local, which in England is met by local rates, and which, in fact, must be met locally, or not at all.'

4. At about the same time the late Sir Henry Maine wrote with reference to the same subject:—'I do not think that anybody can have observed the recent workings of our system of financial control without coming to the conclusion that, if it be not on the point of an inevitable collapse, it is at all events in great danger of going to pieces unless the strain be lightened somewhere.'

5. Nor were the evils complained of by any means confined to the purely financial branches of the administration. It was bad enough of course that

insufficient funds were available for local purposes, and that the utmost uncertainty prevailed as to the amounts likely to be sanctioned for Provincial expenditure. But the worst consequences were those which took effect on the administration itself, and on the relations between the Provincial and Supreme Governments. The constant scramble for the largest share of the public revenues—a scramble in which the least scrupulous were apt to come off best—brought with it serious differences of opinion as to petty details of expenditure and led to constant interference on the part of the Supreme Government in matters of which it was necessarily very ill informed. This was resented by the Local Governments, who were in touch with the facts and knew their own wants, and in this way a state of tension and conflict was brought about which added greatly to the difficulties of Indian administration.

6. In the Resolution of the 14th December 1870, the Supreme Government reviewed the entire question. They observed that, under the existing system, the division of responsibility was ill-defined, and that this led to conflict of opinion injurious to the public service. In order to avoid these conflicts, the obligation to find the funds necessary for administrative improvements ought to rest upon the authority whose immediate duty it is to devise such measures. They went on to say that the Supreme Government was not in a position to understand fully local requirements, nor did it possess the knowledge necessary for the successful development of local resources. Each province had special wants of its own, and might have means for supplying them which could not be properly diverted to Imperial purposes. A tax applicable to the circumstances of one part of the country might be distasteful or unsuitable elsewhere, and everywhere rates might be proper for provincial or local purposes, which could not be taken for the Imperial revenue.

7. In order to give effect to these principles, the Government of India accordingly made over to the Bengal Government for the year 1871-72 the financial control of the following services:—Jails, Registration, Police, Education, Medical Services (except Medical establishments), Printing, Roads and Miscellaneous Public Improvements, Civil Buildings, a certain proportion of Public Works establishments, and a certain proportion of tools and plant. The allotment given to meet these services amounted to Rs. 1,16,85,920 which was arrived at by adding up the actual charges of the year 1870-71, and taking this as the Provincial assignment, less a deduction of a rateable proportion of Rs. 3,50,000 which was resumed by the Imperial Government. By a subsequent Resolution of the 20th March 1871 a special allotment of Rs. 5,32,870 was made in order to enable the scheme to be inaugurated successfully. This sum was treated as the opening balance of the year 1871-72.

8. The Government of India undertook to maintain for the future the assignments for Provincial services at the amounts thus fixed, unless some fiscal misfortune, such as a heavy loss in the opium revenue, or some national disaster, such as war or severe famine, should occur; and pledged itself in any case not to reduce them without previous consultation with the Governments concerned. It was left to the discretion of the Governments to distribute the total grant among the several departments for which they had become responsible, and it was laid down that any portion of the assignment made to any province that might be unspent at the end of the year would not lapse to the Imperial revenue, but would remain at the disposal of the Local Government. It was further provided that each Local Government should publish its own yearly estimates and accounts in the local gazette, together with a financial exposition (which should, where possible, be made before the local Legislative Council) analogous to that annually made in the Legislative Council of the Governor-General.

9. The financial control thus entrusted to the Local Government was to be exercised subject to the conditions that without the previous sanction of the Government of India no appointment on more than Rs. 250 a month should be created; that no class or grade of officers should be created or abolished; and that no addition should be made to the pay or allowances of any individual or class of officers that would lead to increase in the emoluments of any public servants doing duty in the same province whose pay and allowances are charged to Imperial revenues. No public money might be invested, and no services rendered to other departments by the transferred departments were to be diminished, nor might the latter claim increased services from other departments. The rules of the Supreme Government as to leave of absentee and absentee deputation and superannuation allowances were to be observed,

and returns, accounts and estimates were to be submitted to the Supreme Government in such form and at such times as might be prescribed.

10. In addition to these conditions, which were based in the main on financial considerations, the Local Government was reminded that increased powers of financial control would be accompanied by a corresponding increase of administrative responsibility, and that in respect of general principles it must follow the main lines of policy laid down by the Imperial Government. It was added that the procedure of the departments of Registration, Jails and Police was to a large extent governed by law; and that, although no law existed on the subject of education, the policy of the Government had been declared and prescribed in despatches from the Secretary of State, the authority of which and of the rules sanctioned by the Government of India regarding grants-in-aid and other matters of general principle was not affected by the policy of decentralisation.

11. In introducing this far-reaching administrative reform, the Government of India expressed the belief that it would produce greater care and economy; that it would import an element of certainty into the fiscal system which had before been absent, and that it would lead to more harmony in action and feeling between the Supreme and the Provincial Governments than had formerly prevailed. Beyond all this there was a greater and wider object in view. It was felt that local interest, supervision and care were necessary to success in the management of funds devoted to education, sanitation, medical, charity and local public works. And it was hoped that the operation of the new scheme would afford opportunities for the development of self-government, for strengthening municipal institutions, and for the association of Natives and Europeans to a greater extent than before in the administration of affairs.

12. On looking at the system thus introduced it is impossible not to be struck by its resemblance to the systems of federal finance which prevail in the German Empire and in the American Commonwealth. In these countries the functions of the Imperial and the Local Governments are divided in much the same way as they are in India. Thus in Germany the revenues derived from Customs, the indirect taxes upon salt, tobacco, brandy, and sugar, the revenues from stamps, bills of exchange, securities and playing cards are set apart for the Imperial Budget, the expenditure side of which includes the cost of the Federal Government—the Army, Navy, Post Office, Telegraph, State Railway, Supreme Court, Imperial Bank, Pension and Invalid Funds, Currency and Debt. Any deficit which remains after the sources of revenue reserved for the Empire have been exhausted is met by contributions raised from the individual States according to their population. The actual demands under this arrangement varied in the Budget of 1892-93 from £9,405,191 levied on Prussia to £12,392 paid by the little State of Schaumburg-Lippe. In America the Federal Government raises its revenue by indirect taxation and chiefly by duties of customs and excise. Direct taxes were levied during the war, and stamp duties were also resorted to, but no stamp revenue is now collected by the National Government. The individual States on the other hand derive almost the whole of their revenue from direct taxation, as the levying of import or export duties by a State is forbidden by the Federal Constitution.

13. Close as these resemblances are, there is no reason to suppose that the Indian system was modelled or has been materially influenced by these Federal systems of finance. Provincial finance is a plant of natural growth, developed under the pressure of administrative necessity, and owing nothing to the example of other countries. It was in fact devised, if not actually introduced, before the German system, which it most closely resembles, had come into existence; and it was developed on lines which, though leading to substantially the same result, started from diametrically opposite directions. Both in Germany and America the individual States came first, and they were the sole repositories of sovereign power. The Federal system was created by the States stripping themselves of certain attributes of sovereignty and making them over to the Central Government. In India this order of things was reversed. All power resided in the group of departments forming the Government of India, and for a long time this central bureaucracy absorbed and exercised all the functions of Government and itself transacted all financial business from the negotiation of a State loan down to sanctioning of a chaukidar's pay. At length the burden became too heavy and the complication too great, and the Central Government transferred some

of its powers to the Local Governments to be exercised subject to the conditions stated above. Thus they arrived by an independent process of development at substantially the same results as the German Imperial Government. The main differences are, first, that in Germany the division of taxation between the Empire and the individual States is effected by reserving all indirect taxation for the former, and leaving to the States direct taxes which the Empire does not levy, and secondly; that the contributions of the States to the Empire are regulated with reference to the population concerned. In India, on the other hand, no attempt is made to set apart certain kinds of taxation as exclusively Imperial, and the division is effected by assigning arbitrary fractional shares to the Provincial Governments. Similarly the amount of the contributions levied from time to time by the Imperial Government is not regulated by any intelligible principle, but varies like the medieval benevolences according to the necessities of the moment. The Indian system, though less precise and logical than the German, is probably a good deal more elastic, and admits of being modified at intervals of five years, or even oftener, in accordance with the requirements of Imperial Finance.

14. I now turn to the current contract, which began to take effect on the 1st April 1892. After a lengthy correspondence with the Government of India, the terms and conditions of this contract were finally settled on the 17th March 1892. It was then arranged that the revenue and expenditure shown in the schedule attached to the Government of India's letter of that date should be Provincial in certain specified proportions, and that, from the revenues thus assigned, a deduction of Rs. 14,39,000 should be made through the Land Revenue head. The Bengal Government has no means of knowing on what basis, or by what method of calculation, the sum of Rs. 14,39,000 was arrived at. On the receipt side of the account, the Provincial Government gets the whole of the following items:—Twelve per cent. on the Land Revenue collected from Government estates; rents of Salt Warehouses; fines and other minor receipts; Provincial rates; minor customs receipts; interest on local loans; receipts from Courts of Law, Jails, Police, Marine, Education, Medical, Botanic Gardens, Cinchona, Fairs, and Emigration and receipts in aid of superannuation; also Stationery and Printing, except the value of supplies to Railways and local bodies, and all receipts from Irrigation, Navigation, and Civil Works. It receives one-half of Assessed Taxes, Forest receipts, and Registration receipts, and of the traffic earnings on the Eastern Bengal Railway System; one-fourth of Excise and of minor Land Revenue heads, and three-fourths of the important head of Stamps. The revenue from these sources for 1893-94, excluding the opening balance, is estimated at Rs. 4,22,30,000.

15. On the expenditure side the Government of Bengal is required to meet all charges under the head of Land Revenue, except Survey and Settlement; all expenditure for Provincial rates, and the transferred heads of Customs and Salt and Interest; also charges arising under the heads Courts of Law, Jails, Police, Marine, Education, Medical, and, with certain exceptions, Political; the whole of Scientific and Minor Departments, except Census, Ancient Manuscripts and certain Veterinary charges; the whole of Stationery and Printing; working expenses of Irrigation and Navigation and Civil Works, with the exception of Imperial Buildings It is also responsible for one-half of the expenditure under Assessed Taxes, Forest, and Registration, and for half of the working expenses of the Eastern Bengal Railway System; for three-fourths of Stamp expenditure and a quarter of Excise.

16. Concurrently with the settlement of this contract, the general rules regulating Provincial finance were republished with the modifications they had undergone up to date, and it was also laid down that, if any considerable charge of an exceptional nature, which ought ordinarily to be borne by one Province were paid in another Province, the question of a corresponding adjustment between the two would be specially dealt with. This latter provision was rendered necessary by the decision to stop inter-provincial adjustments. It was further arranged that, on the score of the technical character of the work and the necessary uniformity in the working of all State Railways, the Provincial Government should not exercise any administrative or financial powers in regard to the Eastern Bengal Railway; but in order to maintain the Local Government interests in the constructing feeder roads and in the general development of communition in the tract served by the Railway, half the net earnings should

be Provincial; that the capital expenditure required to complete the Higili Canal should be advanced on certain terms from Imperial funds; that the expenditure on Survey and Settlement operations during the term of the contract, being in its nature liable to great variations, and difficult to reduce to a uniform yearly average, should be met by Imperial revenues; and lastly, that if the recoveries on account of the Survey and Settlement operations in Bihar should fall short of the expenditure which is recoverable from the zamindars and raiyats, the difference should be charged to Provincial revenues.

17. With reference to doubts which had arisen concerning the interpretation of former contracts, the Government of India took the opportunity of declaring the contract to be a consolidated one, and not a collection of separate contracts for each Provincial head. They also stated that the representations made by the Government of Bengal, regarding each separate head, had received careful consideration, and that the adjusting figure of Rs. 14,39,000 had been fixed, so as to place the revenue and expenditure in equilibrium on the basis generally of the existing stage of growth. The Local Government, it was said, would be expected to maintain all the Provincial services in a state of administrative efficiency, providing any increased expenditure necessary for that purpose either by reductions of expenditure or from increased revenue. It was added that the Bengal Government would not be entitled to assistance from Imperial revenues to meet future increases of expenditure or decreases of revenue, of whatever nature, classified under Provincial heads.

18. I pass on to notice in somewhat fuller detail those heads of the Budget for 1893-94 which seem to stand in need of comment or explanation.

RECEIPTS.

19. *Land Revenue.*—The Government of India have accepted the estimate of total collections under this head, as passed by the Local Government for 1893-94, amounting to Rs. 3,84,33,000. The estimate provides Rs. 5,07,000 for "12 per cent. on collections from Government estates." Including this amount, the Provincial share of land revenue comes to one-fourth of (Rs. 3,84,33,000—5,07,000) + 5,07,000=Rs. 99,88,000.

The debit of Rs. 13,50,000 to Provincial shown under Land Revenue adjustment is made up as follows:—

	Rs.	Rs.
For fixed contribution to Imperial revenues ...	......	14,39,000
For interest on the capital advanced from Imperial revenues for remodelling the Hidgelee Tidal Canal	......	21,000
Total deduction ...	......	14,60,000
Add—		
For capital outlay on Hidgelee Tidal Canal ...	1,00,000	
For Imperial buildings transferred to District Boards	10,000	1,10,000
Net deduction ...	......	13,50,000

It may be here mentioned that for reasons of account all transfers as between Imperial and Provincial revenues are effected through the head of Land Revenue under the sub-head of adjustments.

20. *Stamps.*—The estimate of total revenue from stamps for 1893-94 amounts to Rs. 1,57,00,000. The growth of this most important and expansive branch of Provincial revenue during the past four years has been as follows:—

		Increase.
	Rs.	Rs.
1887-88	1,38,16,000	......
1888-89	1,38,39,000	23,000
1889-90	1,42,38,000	3,99,000
1890-91	1,42,47,000	9,000
1891-92	1,51,00,000	8,53,000
Total ...	.....	12,84,000

The increase amounts to Rs. 12,84,000, or an average of more than three lakhs a year. The smallness of the increase in 1890-91 was due to the reduction in the rate of copying fees from 4 annas to 3 annas per folio, with effect from 1st April 1890. The revised estimate for 1892-93 amounts to Rs. 1,55,50,000, and the estimate for 1893 94 has been placed at Rs. 1,57,00,000. As the stamp duty is fixed by substantive law at rates which cannot be altered, the revenue under this head cannot be materially affected by administrative measures. All that can be done is to watch the working of the law carefully, to look out for evasions, and to see that adequate penalties are levied for breaches of the law and rules.

21. *Excise.*—The Accountant-General estimated the total revenue for the year 1893-94 at Rs. 1,12,00,000, against Rs. 1,10,64,413 estimated by the Board of Revenue. In Government order No. 654T.-F., dated the 24th October 1892, sanction was given to the enhancement of duty on wholesale licenses for the vend of imported liquor in the town of Calcutta from the nominal sum of Rs. 50 a year to Rs. 50 a month, or Rs. 600 a year, from 1st April 1893. Some changes have also been made in the duties on retail licenses. The effect of these orders will be to increase the revenue to a considerable extent. A substantial increase is also anticipated next year under the head "Farm of drugs," owing to the present rates of duty on all kinds of ganja being raised by one rupee per seer with effect from 1st April 1893, under the orders of the Government of India, in the Finance and Commerce Department, No. 784, dated the 23rd February 1891. It was calculated that the total increase on this and other accounts would not be less than three lakhs, and accordingly the Accountant-General's estimate was raised from Rs. 1,12,00,000 to Rs. 1,15,00,000, and this has been accepted by the Government of India.

22. *Provincial Rates.*—The head *Provincial Rates* represents principally the proceeds of the Public Works Cess, but it includes also the recoveries from District Funds of the proportionate cost of collecting Road Cess and the Rates for the general management of Wards' and Attached Estates. The receipts have been as follows:—

	1887-88.	1888-89.	1889-90.	1890-91.	1891-92.	Revised estimate, 1892-93.	Estimate, 1893-94.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
(a) Public works cess	38,19,860	37,97,870	39,11,698	38,93,461	40,79,753		41,50,000
(b) Proportionate cost of collecting road cess.	3,13,524	2,68,084	3,12,096	3,55,052	3,64,355		3,31,000
(c) General management of wards' and attached estates.	1,03,154	90,369	82,235	71,420	80,419		80,000
Total ...	42,36,538	41,56,323	43,06,024	43,19,933	45,24,527	45,40,000	45,61,000

The variations under (*a*) were due to progress in valuation and revaluation of districts. The gross rental assessed on the introduction of the road cess was Rs. 13,11,68,432, and on the same basis the statistics furnished by the Board of Revenue show that it amounted to Rs. 14,60,45,236 in 1890-91, and Rs. 14,78,83,221 in 1891-92. Large recoveries of the arrears of rate on wards' estates were effected from the Burdwan Raj in 1887-88, and this accounts for the larger receipts under (*c*) in the first year of the contract. The comparatively smaller receipts under (*c*) in 1890-91 and 1891-92 were due to the release from Government management of a large number of estates during the course of the former year.

Head (*b*) is a new head of account which appeared in the Provincial Account in consequence of the introduction of the Local Self-Government Act. Prior to the extension of the Act, the charges for the collection of both the Road and Public Works Cesses were shown in the District Road accounts, the cost of collecting the Public Works Cess being paid to the District Road Committees through the adjusting head of Contribution, an assignment of Rs. 47,000 being made in the Provincial Contract under that head. The arrangement has now been reversed. The collection of the cess in the districts, where the Local Self-Government Act has been introduced is shown as a Provincial charge, and is recovered from the District Funds before the net collections of the Road Cess are made over to the District Boards.

23. *Assessed Taxes.*—The Accountant-General placed the estimates of total receipts for 1893-94 at Rs. 43,50,000. Looking to the steady growth of revenue under this head, the estimate was raised by this Government to Rs. 44,00,000, but this has been reduced by the Government of India to Rs. 43,30,000, with reference to the actuals of 12 months ending January 1893, which amounted to Rs. 43,28,000.

24. *Forests.*—The following table shows the estimates of receipts and expenditure for the year 1893-94, compared with the actuals of 1891-92 and the sanctioned and revised estimates of 1892-93:—

BUDGET HEADS.	Actuals, 1891-92.	Sanctioned estimates, 1892-93.	Revised Estimates, 1892-93.	Budget estimates, 1893-94.
RECEIPTS.	Rs.	Rs.	Rs.	Rs.
I.—Timber and other produce removed from the forests by Government agency ...	41,503	59,400		25,100
II.—Timber and other produce removed from the forests by consumers or purchasers ...	6,95,062	7,21,000		7,07,250
III.—Confiscated, drift and waif wood ...	8,210	17,000		12,180
IV.—Revenue from forests not managed by Government ...	......	......		......
V.—Miscellaneous ...	44,778	34,600		29,470
Total ...	7,89,553	8,32,000	7,50,000	7,74,000
EXPENDITURE.				
A.—Conservancy and Works.				
I.—Timber and other produce removed from the forests by Government agency ...	25,004	41,040		
II.—Timber and other produce removed from the forests by consumers or purchasers ...	49,156	48,744		
III.—Confiscated, drift and waif wood ...	4,112	5,000		
IV.—Revenue from forests not managed by Government ...	......	......		
V.—Rent of leased forests and payments to share-holders in forest managed by Government ...	......	......		
VI. Live-stock, stores, tools and plant ...	35,945	26,600		
VII.—Communications and buildings ...	19,841	46,400		
VIII.—Demarcation, improvement and extension of forests ...	29,495	37,656		
IX.—Miscellaneous ...	5,645	5,560		
Total A—Conservancy and Works ...	1,69,198	2,11,000		
B.—Establishments.				
I.—Salaries ...	1,98,631	2,30,240		
II.—Travelling allowances ...	30,886	33,360		
III.—Contingencies ...	9,804	6,400		
Total B—Establishments ...	2,39,321	2,70,000		
GRAND TOTAL OF EXPENDITURE ...	4,08,519	4,81,000	4,45,000	4,81,000
Surplus ...	3,81,034	3,51,000	3,05,000	2,93,000

The estimates provide for a surplus of Rs. 2,93,000 at the end of 1893-94, against Rs. 3,05,000, the latest estimate for 1892-93.

25. *Registration.*—The Accountant-General placed the revised estimate for 1892-93 at the same figure as the original estimate for the year, which was Rs. 13,60,000. This amount was also proposed as the estimate for 1893-94. The actuals for the twelve months ending January 1893, were Rs. 14,08,000, and the revised estimate for 1892-93 has been placed at Rs. 14,10,000, and the estimate for next year at Rs. 14,20,000. Half the receipts only are Provincial.

26. *Jails.*—The total receipts for 1893-94 were estimated by the Inspector-General at Rs. 9,72,000, while the Accountant-General placed them at Rs. 9,09,000, reducing the estimate under the head Jail Manufactures by Rs. 63,000. The Lieutenant-Governor considered that the probable receipts under this head had been under-estimated by the Accountant-General, and thought they might safely be placed at Rs. 9,50,000. The total estimate of receipts was accordingly placed at Rs. 9,59,000.

27. *Police.*—The Accountant-General estimated the total receipts for 1893-94 at Rs. 2,46,000, against Rs. 4,60,000, the sanctioned estimate for 1892-93, and Rs. 4,48,634, the actuals of 1891-92. The decrease is due to the exclusion of receipts on account of village police in the Chota Nagpur Division, which have been transferred from Provincial to Local. The estimate has been further reduced by Rs. 27,000 on account of the transfer of fees for the inspection of steam-boilers from the Provincial account.

28. *Marine.*—The Accountant-General estimated the total receipts for 1893-94 at Rs. 9,28,000, against Rs. 9,68,000, the sanctioned grant for 1892-93, and Rs. 9,65,408, the actuals of 1891-92. The actual receipts, during the twelve months ending January 1893, were Rs. 9,04,000. The revised estimate for

1892-93 has accordingly been placed at Rs. 9,05,000, and the estimate for 1893-94 at Rs. 9,12,000.

29. *Education.*—The total receipts of the Education Department for 1893-94 are estimated at Rs. 5,71,000, against Rs. 6,10,000, the sanctioned estimate for 1892-93. The actuals of 1891-92 amounted to Rs. 5,95,123, and those of the twelve months ending the 30th September 1892 to Rs. 5,70,758.

30. *Medical.*—The estimate of receipts for the year 1893-94 was placed by the Accountant-General at Rs. 1,49,000, against Rs. 1,50,000, the sanctioned estimate for 1892-93. The estimate has been raised by Rs. 2,000 as some receipts are anticipated in consequence of the circular what the Sanitary Board have issued to all municipalities laying down the rate of fees to be levied from them for the preparation of plans and estimates for drainage and water-works schemes.

31. *Scientific and other Minor Departments.*—The principal items of receipts under this head are from Cinchona manufacture and Emigration fees. The total receipts are estimated at Rs. 1,62,000.

32. *Civil works by Civil Officers*—The Provincial receipts from ferries for the year 1893-94 are estimated at Rs. 2,27,500, and the receipts from cemeteries at Rs. 2,500, against Rs. 2,23,500 and 2,500, respectively, the amounts sanctioned for 1892-93.

EXPENDITURE.

33. *Land Revenue.*—The Accountant-General's estimates for 1893-94 under all the Provincial heads and sub-heads of expenditure amount to Rs. 34,19,000, as follows:—

	Rs.
Charges of district administration	29,43,000
Management of Government estates	4,01,000
Land Records and Agriculture	75,000
Total Provincial ...	34,19,000

The estimate was raised by this Government by Rs. 4,000 in order to provide for revision of office establishment in the Deputy Commissioner's office, Sonthal Parganas. The increased provision, however, does not appear in the estimate of the Government of India.

34. *Salt.*—The Accountant-General estimated Rs. 31,000 for expenditure of the Salt Department during 1893-94, which is the ordinary normal expenditure of the Department. A provision of Rs. 10,000 has, however, been kept in reserve to meet any further improvements that may possibly be made in order to provide increased facilities for the trade at Sulkea, Chittagong, or Narainganj, and the estimate has therefore been raised to Rs. 41,000. The revised estimate for 1892-93 amounts to Rs. 1,25,000, which includes a special provision of Rs. 75,000, the amount payable to Mr. Kilby as an honorarium for his patent salt weighing machine.

35. *Stamps.*—The total expenditure for 1893-94, of the Stamp Department, is estimated at Rs. 6,14,000, against Rs. 5,68,000, the sanctioned grant for 1892-93, and Rs. 4,51,779, the actuals of 1891-92. The actuals of 1891-92 did not include the cost of plain paper for use with Court-fee Stamps, which, under the terms of the new Provincial Contract, is charged to this head with effect from 1892-93, instead of to "Stationery and Printing." The Provincial share amounts to Rs. 4,61,000.

36. *Excise.*—The chief variations in this budget are due to the reduction of the salary of Excise Commissioner from Rs. 2,900 to Rs. 1,800, as under the orders of the Secretary of State, the Excise Commissioner will now ordinarily be a Magistrate of the second grade. Larger provision has, however, been made for the construction and completion of distillery buildings, and the total grant now stands at Rs. 7,16,000, of which the Provincial share is only one quarter, or Rs. 1,79,000.

37. *Assessed taxes.*—The total expenditure of the Income-Tax Department during 1892-93 was originally estimated at Rs. 1,90,000, and this amount was reproduced by the Accountant-General as the revised estimate for the year, while he placed the estimate for 1893-94 at Rs. 1,89,000. It has been taken by the Government at Rs. 1,93,000, of which the Provincial share is one-half. The Accountant-General's estimates for 1893-94 include a provision

of Rs. 3,600 for the local allowance of Rs. 300 per month drawn by the Superintendent of Preventive Service for performing the duties of the Collector of Income-Tax, Calcutta. As Mr. Kilby, the permanent Superintendent, has retired from the service, and a whole-time Collector of Income-Tax on Rs. 700—1,000 per mensem has been appointed, a provision of Rs. 8,400 as salary, and Rs. 1,200 as house allowance, has accordingly been made under this head.

38. *Judicial Courts.*—The following table compares the estimates of expenditure for 1893-94 with the sanctioned grants for 1892-93 and the actuals of 1891-92:—

	Actuals, 1891-92.	Sanctioned estimates, 1892-93.	Estimate, 1893-94.
	Rs.	Rs.	Rs.
High Court	11,41,299	11,35,000	11,40,000
Law Officers	3,14,862	2,82,000	2,90,000
Coroner's Court	14,358	13,000	13,000
Presidency Magistrate ...	70,430	63,000	63,000
Civil and Sessions Courts ...	43,59,269	43,90,000	44,50,000
Courts of Small Causes ...	2,01,489	1,82,000	1,78,000
Criminal Courts	22,44,523	22,45,000	22,56,000
Pleadership Examination charges	7,822	8,000	8,000
Refunds	1,28,755	1,15,000	1,30,000
Total ...	84,82,807	84,33,000	85,28,000

The increased provision of nearly a lakh of rupees under Civil and Session Courts on the actuals of 1891-92 represents the financial effect of the increase which has been found necessary in the number of Subordinate Judges, and Munsifs and Judicial establishments generally. There has also been sanctioned an addition to the ministerial establishment of the Civil Courts in consequence of the recommendations made in the reports of Messrs. Toynbee and Stevens, who were appointed to enquire into the subject.

The grants for 1893-94 for the Jail Department are as follows:—

Jails.	Sanctioned grant.
	Rs.
Superintendence	52,836
Presidency Jail	98,826
Central Jails	4,93,894
District „	5,81,958
Lock-ups	1,20,457
Reformatary Schools	35,975
	13,83,946
Add for rounding	54
Total ...	13,84,000
Jail manufactures	7,95,000
GRAND TOTAL ...	21,79,000

The total grant amounts to Rs. 21,79,000 against Rs. 20,22,000 the actuals of 1891-92 and Rs. 20,90,000 the revised estimate for 1892-93. The increase in expenditure, which is partly counterbalanced by an increase in receipts, is necessitated by the increase of jail population, and adequate provision has to be made for the high prices of food-grains for ration expected to prevail during the year.

39. *Police.*—The total expenditure of the Police Department for 1893-94 was originally estimated at Rs. 56,80,000, from which were deducted Rs. 21,000, the charges connected with steam-boiler inspection, and Rs. 75,000 under the head of temporary transport for the South Lushai Hills. The Government of India have accepted the deduction only of the first item, so that the grant now stands at Rs. 56,59,000. The estimate under Special Police, amounting to Rs. 4,98,000, includes a lump provision of Rs. 4,46,000 for expenditure during the ensuing year under the head South Lushai Hill Force. The estimate has been accepted provisionally, subject to any modifications which Government may hereafter

find it necessary to make in view of the approaching transfer of the South Lushai territory to Assam.

40. *Marine.*—The difference of Rs. 10,000 under this head between the estimate of the Government of India and that of the Local Government represents the provision made by this Government for compensation payable to Captain Petley, the Port Officer, on account of his enforced retirement, which is payable by the Provincial revenues, but which does not appear to have been included in the budget passed by the Government of India. A sum of a lakh and a half required to meet the balance of the cost of the new pilot vessel to replace the *Coleroon*, which is now being built at the Government Dockyard at Bombay, has been provided under the head of Purchase and hire of ships and vessels.

41. *Education.*—The estimate provides for a total expenditure of Rs. 25,73,000 against Rs. 25,30,000, the revised estimate for 1892-93. The increase is chiefly for grants-in-aid for primary education, and for additional staff sanctioned for the Sibpur Engineering College. This heavy expenditure includes the cost of Government Colleges which accounts for Rs. 5,20,000, Government schools Rs. 5,45,000, and grants-in-aid Rs. 5,89,000. These are institutions for general education, but special or technical education is also fairly well supported—Government Professional Colleges costing Rs. 1,21,000 and Special Government schools Rs. 1,45,000.

42. *Medical.*—The grant for the Medical Department for 1893-94 stands—

	Rs.
Medical Establishment	5,86,000
Hospitals and Dispensaries	3,83,000
Sanitation and Vaccination	1,92,000
Grants for medical purposes	3,500
Medical Schools and Colleges	2,68,000
Lunatic Asylum	1,10,000
Lock Hospitals	16,000
Chemical Examiner	26,000
Refunds	500
Total ...	15,85,000

The total grants amount to Rs. 15,85,000 against Rs. 15,67,000 the actuals of 1891-92—Rs, 15,80,000 the revised estimate for 1892-93 proposed by this Government. and Rs. 16,00,000 the revised estimate of the Government of India. The incease on the actuals of 1891-92 is due to the normal growth of the administrative charges.

The estimate of the Local Government includes an additional provision of Rs. 4,000 for remuneration to Civil Surgeon's clerks for doing vaccination work. The provision does not appear in the estimate of the Government of India. This additional duty forms a portion of a large scheme of reorganization which has been recently carried out, and which is expected to bring about a great extension of vaccination, and materially to enhance its efficiency in rural areas.

43. *Scientific and other Minor Departments.*—The following table shows the details of the grants under this head:—

	Rs.
Provincial Museums	16,140
Donation to Scientific Societies	14,000
Experimental cultivation	19,500
Cinchona Plantations	1,03,552
Public Exhibitions and Fairs	12,350
Imperial Institute	500
Veterinary charges	19,000
Botanic and other public gardens	1,10,009
Emigration	22,754
Census	1,700
Registration of Railway Traffic	2,320
Registration of River and Road-borne Traffic	18,108
Provincial statistics	2,500
Examinations	3,000
Refunds	713
Charges in connection with the Indian Factories Act ...	18,400
Total Provincial ...	3,64,546

The estimate for 1893-94 is Rs. 3,64,000 against Rs. 3,13,000 the actuals of 1891-92 and Rs. 3,25,000 the revised estimate for 1892-93. The increase is chiefly for the provision of two new items, veterinary charges (19,000) and charges of Indian Factories Act (18,400), which were not in existence in 1891-92.

44. *Stationery and Printing.*—The estimate under this head amounts to Rs. 13,05,000, but it is hoped there will be some reduction of expenditure under this head in consequence of the recent orders issued to revise each form, whenever necessary, only once in a year, and not to introduce new forms, except under special orders, till the old stock is exhausted.

45. *Civil works by Civil officers.*—The difference of Rs. 32,000 under this head between the estimate of this Government and that of the Government of India is due to the provision struck out by the Local Government for the construction of bridges in the South Lushai Hills.

46. The closing balance, as now estimated by the Government of India, is Rs. 20,72,000, *i.e.*, Rs. 72,000 in excess of the minimum balance, which the Provincial Government is required to maintain under the orders of the Government of India.

The foregoing paragraphs explain, in as full detail as is appropriate to the occasion, the figures of the Provincial Budget estimate of 1893-94. For the results of the system of Provincial Finance from its first introduction in 1871-72 to the close of the financial year 1891-92, a period of twenty years marked by great financial vicissitudes, I must refer the Council to the second part of this Review, which, as I have already stated, will be published in next Gazette for the information of the public. It is sufficient to say here that the Bengal of the present day owes to Provincial Finance most of the facilities and conveniences which distinguish it from the Bengal of 20 years ago: its railways, its irrigation and navigation canals, many of its most important roads, and a host of administrative improvements which it would be tedious to enumerate, amongst them the Council Chamber in which we are now assembled. The period of 20 years which we have to look back upon was one, as I have already said, of many vicissitudes and public calamities. At its opening the province had hardly recovered from the shock of one famine and was soon to suffer from another. Cyclones, floods, wars and rumours of wars, a falling exchange, grave alternations of agricultural depression and prosperity, serious changes of policy affecting the revenues of the State, all these things form a series of events beyond the control of the Provincial Government, which are liable to recur at any moment, and which constantly threaten the security of the Provincial finances.

PART II.

The Working of Provincial Finance.

The contract of 1871—77.

In attempting to gauge the results of the process of decentralisation which commenced in 1871-72, and to indicate the direct and tangible benefits which Bengal has derived from it, it will be convenient to follow in the main the periods at the close of which the arrangement, of late years called a contract between the Imperial and Local Governments, has been revised. The first of these periods embraced the six years, 1871-72 to 1876-77. Since then the contract has been revised at intervals of five years.

Accounts of Provincial Services from 1871-72 *to* 1876-77.

Major Heads.	Receipts.

* Adjustment of old error.

2. Before proceeding to comment in detail on the figures of this statement, it will be convenient to recapitulate briefly the various classes of estimates and accounts with which the Provincial Government then had to deal. There were, *first*, the estimates and accounts of *Imperial Services*, that is to say, of those branches of revenue and expenditure which had not been made over to provincial control and management. In its relation to these services, the Local Government was in the same position that it held before the introduction of the Provincial Services scheme in 1871-72. *Secondly*, there were the estimates and accounts of *Provincial Services*, or of those branches of revenue and expenditure, originally Imperial, made over to the management of the Local

Government under the system of provincial contracts. *Thirdly*, there were the estimates and accounts of the funds constituting the *Provincial Reserve*, that is, of those Local Funds, the balances of which were at the disposal of the Local Government for provincial purposes. *Fourthly*, there were the estimates and accounts of those *Local Funds* (properly so called) which are by law or by their constitution devoted to particular local and limited objects. The amount of control which could be exercised over these by Government varies considerably, and might be said to be at a minimum in the case of the District Road Fund, and at a maximum in the case of the Port Funds. Both these strictly Local Funds, and those included under the Provincial Reserve, might be divided with reference to their origin into two classes, thus—

(I)—Funds supported by compulsory rating, or by payments under sanction of law, or orders having the force of law.

(II)—Funds made up of payments of the nature of rents, tolls, or fees for services or facilities rendered or privileges conferred.

Lastly, there were the accounts and estimates of *Municipal Funds*. These, though strictly speaking local funds, were not dealt with in the Local Funds Budget of this Government, under which only the funds of the *fourth* class were treated together.

3. By its Resolution No. 1886, dated the 28th March 1877, the Government of India directed that the transactions of the Local Government, under the heading of 'Provincial Services,' should be re-incorporated in the general estimates and accounts. The effect of this order was to amalgamate, for the purposes of the Imperial Budget, the *first* and *second* classes of accounts and estimates described in the preceding paragraph. A later Resolution, No. 1072 of the 20th February 1878, re-incorporated with the estimates and accounts of Provincial Services "those resources recorded under 'Local Funds' which were at the free disposal of the Local Government for expenditure in any part of its jurisdiction without legal let or hindrance." The effect of this was to incorporate with the estimates of Provincial Services, and therefore with the Imperial estimates, the transactions of the funds treated in Bengal as Provincial Reserve (*i.e.* the *third* class above described).

4. Turning now to the statement, it must be observed first of all that the figures for the years 1871-72, 1872-73, 1873-74 include the receipts and charges of Assam, while those for the last three years of the period include the accounts for Bengal only. Secondly, it must be remembered that the Imperial assignments, originally fixed at Rs. 1,16,85,920, underwent a number of modifications, according as certain services were transferred to the management of the Government of Bengal or withdrawn from its control. The most important of these, and the only one which need be mentioned in a historical review, is the reduction of Rs. 13,30,000 on the separation of Assam. This sum was arrived at by allotting to Assam the actual average expenditure on provincial services within its limits during the last three years of its connexion with Bengal, the Bengal estimate being reduced by that sum. The average expenditure was ascertained to be Rs. 5,30,000 on provincial public works and Rs. 8,00,000 on other provincial services, and by deducting this sum the Bengal assignment was reduced in 1874-75 to Rs. 1,10,41,000, as shown in the statement. It may be added that the large increase in the allotment which appears in the year 1872-73 was due to a special grant from the Supreme Government of Rs. 8,66,677 for the price of the old Sadar Court building, and of one lakh for expenditure on the relief of the so-called Burdwan fever, which caused heavy mortality in that year.

5. Turning now to the detailed heads, we find under *Jails* an increase of nearly two lakhs in charges, against which we must set an increase of rather less than the same amount in receipts. Extended manufactures brought about larger sales on the one hand, and on the other involved increased purchases of raw material; establishments were to some extent increased, and in the scarcity years 1873—75, the larger jail population swelled the expenditure on diets.

6. The *Registration* receipts were nearly doubled owing to Sir George Campbell's liberal extension of rural sub-registry offices, but although there is no doubt that this department earned a profit on the whole, and was indeed the only

department of those transferred in 1870 in which the income was susceptible of much development, still the exact earnings cannot be stated, as the charges for buildings were provided for in the Public Works budget.

7. Owing doubtless to the transfer of the Assam districts, and probably also to some change in the form of the accounts, the *Police* figures show a reduction of nearly four lakhs under Receipts and ten lakhs under Charges.

8. *Education* receipts rose by nearly a lakh and the charges by nearly five lakhs, notwithstanding the transfer of territory to Assam. The increase under the head of receipts was mainly due to the large grants made to primary schools under the policy introduced by Sir George Campbell, while greater liberality in the bestowal of scholarships, larger grants to Muhammadan schools and district schools, and the strengthening of the inspecting agency which this policy involved, also contributed to the same result.

9. In the *Medical* Department the receipts rose from under half a lakh to about a lakh and a half, and the charges from nine lakhs to over thirteen and a half. This was due partly to the Burdwan epidemic fever, but mainly to the great extension of dispensaries and hospitals initiated by Sir G. Campbell, who admitted that in this he had not exercised so severe an economy as in other branches of administration.

10. The figures shown under the three heads *Miscellaneous*, *Contributions* and *Public Works*, are greatly complicated by transactions relating to the scarcity of 1873—75. Thus the receipts under Miscellaneous rose from Rs. 98,460 in 1871-72 to Rs. 33,70,092 in 1873-74 and to Rs. 77,29,059 in 1874-75, owing to the inclusion under this head of the special famine grants of Rs. 22,89,100 and Rs. 76,38,139 made by the Government of India for expenditure on relief works. Then the heavy charges shown under Contributions represent the special grants made by the Local Government to District Road Committees for the same purpose, while the greatly enhanced expenditure of the Public Works Department during the two years is also due to relief operations.

11. The same cause, unforeseen and uncontrollable expenditure on relief, accounts for the startling fluctuations which appear in the balances. In the first two years the strict economies of Sir George Campbell effected savings aggregating about seventeen lakhs of rupees under the Provincial Service heads, and the year 1872-73 opened with a balance under those heads of Rs. 22,23,126, while the balance under Provincial Reserve had risen to Rs. 16,12,440, making a grand provincial balance of Rs. 38,35,566. For the year 1872-73 very liberal grants were made under Education, Medical, Public Works, and other headings; but the closing balance under 'Service' rose to Rs. 35,58,298. This result is, however, partly to be explained, as has been mentioned above, by a special grant from the Supreme Government of Rs. 9,66,677 on account of the Sadar Court buildings, capitalization of Calcutta rents, and Burdwan fever relief. The greater part of this special grant was meant to be reserved for the erection of public offices for the Bengal Government. Under Reserve the balance fell to Rs. 9,80,683, making the aggregate provincial balance at the opening of 1873-74 Rs. 45,38,981. In 1873-74 the Local Government was called upon to face the enormous expenditure on relief works caused by the famine in Bengal and Bihar, and the year closed with a deficit of Rs. 19,037 under 'Services,' while the balance under Reserve had fallen to Rs. 5,14,704. The net provincial balance at the opening of 1874-75 was thus only Rs. 4,95,667. During 1874-75 the expenditure upon relief works continued to be heavy, but a special grant of Rs. 76,38,139 was received from the Supreme Government, and the year closed with a credit balance of Rs. 23,61,287 under Services, and of Rs. 8,23,465 under Reserve, the aggregate being Rs. 32,92,752. In the year 1875-76 the final adjustment of the famine account between the Supreme and Local Governments took place. It was estimated that if all charges on account of famine had been excluded from the accounts, the closing balance under 'Services' in 1873-74 would have been Rs. 19,21,069, in 1874-75 Rs. 13,87,787, and in 1875-76 Rs 12,97,981. The balance under Provincial Reserve at the end of 1875-76 being Rs. 7,21,464, that year would, famine apart, have left the Local Government with about 20 lakhs of rupees in hand. The demand of the Imperial Government on account of that portion of the relief works chargeable to the Provincial Public Works

Budget being far in excess of this sum, it was arranged that the Bengal Government should surrender to the Imperial Government about 15 lakhs of its estimated credit balance; that all outstanding famine charges beyond that amount should be debited to the Imperial Government; and that the accounts should be so adjusted as to leave to the Government of Bengal an opening balance of Rs 5,00,000 on the 1st of April 1876. Owing to some trifling discrepancies in the accounts, the actual opening balance of the year 1876-77 was Rs. 5,01,180.

Contract of 1877—82.

12. With that year the scheme of decentralization, which was introduced in 1871, underwent a considerable development. Under the system as originally started, the Local Government was entrusted with the management chiefly of spending departments, such receipts as accompanied them being supplemented by large consolidated allotments for their maintenance. The only department in which the revenue outstripped the charges was Registration; Police, Jails, Education, and Medical were services under which the receipts could never be expected to bear more than a very small ratio to the charges. It was therefore chiefly with a view to economy in administration that the Government of Lord Mayo determined to make the Local Government responsible for the financial management of these branches of the Administration. In 1877 the system of decentralization took another step in advance. The Government of India, while handing over other great departments of expenditure to the Local Government, also entrusted to its use and responsibility on fixed terms of progressive payment all the principal revenues which could be deemed capable of steady expansion under careful local management. The success of the earlier measure had been sufficient to secure some extension of the principle; but the form which the extension took was in great measure determined by the decision to which the Secretary of State had come on the great question of famine relief. In his financial statement of March 1877, Sir John Strachey announced that it was the intention of the Government of India to meet charges for famine and unremunerative works out of revenue for the future. He proposed to place the Government in a position to do this, not by introducing any new Imperial taxation, but by extending the system of decentralization, and by making each Local Government responsible for the management and charges of the great public works which had been constructed, and for the construction and maintenance of those to be subsequently undertaken. He declared that the fundamental principle to be pursued in regard to public works was the enforcement of Provincial responsibility only. Bengal was the only Province, however, which was then considered able to bear the whole of its own burden. The charge for interest on productive Public Works was transferred to the Provincial account, and the Lieutenant-Governor was invited to raise by taxation the funds necessary to meet existing charges, as well as to provide for new works. The Public Works Cess Act of 1877 was accordingly introduced. Provincial responsibility for all productive works, existing and future, was definitely assumed, and the policy which the Secretary of State had affirmed was in regard to this Province carried into effect.

13. The decentralizing measures of 1877 were of a threefold character—(1) Certain departments of Revenue were made over to Provincial management, some for fixed payments, some for progressive contributions to the Imperial Treasury. (2) Certain departments of expenditure were made over to it with fixed allotments. (3) The Public Works which had been or were to have been constructed with borrowed money were made over to it without any assignment. The arrangements were mutually interdependent. The first and second were connected, because, although fixed allotments only were made for expenditure, it was well recognised that expenditure could not be fixed, but must be progressive, and it was intended that the necessary increase in charges should be met out of the profits which the Provincial Government might derive from the assigned revenues over and above the amount of its contribution. The first and third were connected, because it was similarly recognised that the large responsibilities assumed by the Local Government in regard to Public Works should be merged in the aggregate of its ways and means. It was only reasonable, therefore, that the progressive contributions under the heads of assigned

revenue should be so fixed as to leave the Local Government a margin for the discharge of its actual responsibilities, as well as for the improvement of the Province.

14. In addition to the Departments of Police, Jails, Registration, Medical, Printing, Roads and Civil Buildings transferred by Lord Mayo's Government in December 1870, with an assignment of Rs. 1,16,85,920, which had been reduced by March 1877 to Rs. 1,11,11,574, the Local Government was further entrusted, under the contract of March 1877, with the management of the following heads of revenue:—(1) *Excise*; (2) *Customs* (Miscellaneous receipts); (3) *Salt* (Minor items); (4) *Stamps*; (5) *Law and Justice* (Proper); (6) *Marine*, and (7) *Miscellaneous*, and of the following heads of expenditure:—(1) *Refunds* of the Assigned Revenues; (2) *Land Revenue*; (3) *Excise*; (4) *Customs*; (5) *Salt*; (6) *Stamps*; (7) *Administration*; (8) *Minor Departments*; (9) *Law and Justice*; (10) *Marine*; (11) *Miscellaneous*, and one or two smaller items. The allotment made under the heads of expenditure was Rs. 1,34,70,000, and the total, including the existing allotment under the heads previously transferred, was Rs. 2,45,29,000. From this was deducted a lump sum of Rs. 5,90,000, and the net consolidated grant was thus reduced to Rs. 2,39,39,000. The payments to be made on account of the assigned reductions in the first year amounted to Rs. 1,91,07,000, and this was to be increased every year by Rs. 3,75,000 under the heads of Excise, Stamps, Law and Justice. The balance represented the Imperial allotment to the Provincial revenues, which, subject to adjustments, was thus to be Rs. 48,32,000 in 1877-78, Rs. 44,57,000 in 1878-79; Rs. 40,82,000 in 1879-80; Rs. 37,07,000 in 1880-81, and Rs. 33,32,000 in 1881-82.

15. The following table shows the progress of the Provincial revenue and expenditure during the five years 1877—82. The Revenue side of the account includes the proceeds of the Public Works cess, and the receipts from Railways and Canals. On the expenditure side appear the charges for interest on the Capital expended and the cost of maintenance. The sum entered as a receipt under Assessed Taxes is simply the grant made to the Provincial revenues to meet the cost of collections and refunds on account of the License-tax.

* Decrease owing to the miscellaneous refunds now being charged against the particular service heads to which they refer.

† This is for cost of European stores included in accounts and future estimates under contingencies of the minor heads of service for which the stores are purchased.

‡ Includes Rs. 11,31,862 on account of 42 (now 41)—Miscellaneous Railway Expenditure.

16. Owing to short collections of the Public Works Cess in 1877-78, to the absence of any receipts under assessed taxes, the license tax not having then been introduced, and to various differences in the form of the accounts, it is only from 1878-79 that accurate comparison of the condition of the finances in the different years is possible. The gross revenue was Rs. 3,20,78,000 in 1878-79; it had risen to Rs. 3,77,61,000 by 1881-82. In other words, the revenue had increased at the rate of about 15 lakhs of rupees a year during the three years, though there had been no new taxation in the interval.

17. The progress of the revenue under *Excise* during this period is remarkable. While the revenue increased from 70¼ lakhs in 1878-79 to 85½ in 1880-81 and 93¾ in 1881-82, the cost of collecting it declined from Rs. 2,83,000 to Rs. 2,73,000. This was the result partly of the extension of the outstill system, and partly of the great prosperity of the province during this period.

18. A succession of good harvests with high prices had provided the people with money to spend on luxuries, and among these exciseable articles, in this as in all countries, hold a high place. There was a large increase in the consumption of duty-paying liquor where the sadar distillery system had been maintained, and also in the consumption of excise opium, of piece-goods, and of everything on which prosperous peasants are disposed to spend their surplus funds. The revenue from excise opium was Rs. 12,49,000 in 1877-78, Rs. 13,35,000 in 1878-79, Rs. 13,62,000 in 1879-80, Rs. 13,95,144 in 1880-81 and Rs. 14,47,000 in 1881-82. The increased consumption of piece-goods also bore unmistakeable testimony to the increased prosperity of the country, and confirmed the view that the excise revenue had been to a great extent improved by the greater spending power of the people. The value of these goods carried to Bengal or Bihar districts by the Eastern Bengal and East Indian Railways was Rs. 6,44,31,000 in 1879-80 and Rs. 6,91,16,000 in 1880-81.

19. The excise revenue was made over to the management of the Provincial Government for a payment rising from 64 lakhs in 1877-78 to 68 lakhs in 1881-82. The gross profit made by the Bengal Government was thus roughly 4½ lakhs in the first year, 5¼ lakhs in the second, 6 lakhs in the third, 18½ lakhs in the

fourth, and 25¾ lakhs in the fifth. The fixed grant for managing the revenue was Rs. 2,92,000. The actual cost was Rs. 3,06,000 in 1877-78. This was reduced by careful management to Rs. 2,73,000 in 1881-82. Thus in 1881-82 the excise receipts exceeded the receipts of 1877-78 by no less than twenty-five lakhs of rupees, while the expenditure for collecting the revenue and managing the department showed a reduction of Rs. 33,000.

20. Under *Stamps* the increase, though less rapid than under Excise was nevertheless very satisfactory and sustained. The actual receipts in 1876-77 were Rs. 95,48,000, and the revenue was made over to the Provincial Government for a payment rising by 2½ lakhs a year from Rs. 98,50,000 in 1877-78 to Rs. 1,08,50,000 in 1881-82. In 1877-78, however, there was a large increase in receipts owing to the operations under the Land Registration Act, and the actual revenue collected was Rs. 1,08,15,000. In 1878-79 the receipts were Rs. 1,07,85,000. In 1879-80 the receipts rose to Rs. 1,14,99,000, and in 1881-82 to Rs. 1,20,24,000. The increase in the estimated receipts, however, arose from a change introduced by the High Court in the procedure for obtaining copies of documents, and there was a corresponding decrease in fees formerly credited to Law and Justice, and an increase in the cost of establishments debitable to the same head. The steady and substantial increase in the Stamp Revenue from Rs. 95,48,000 in 1876-77 to Rs. 1,20,24,000 in 1881-82 was undoubtedly to a great extent the result of the increased circulation of wealth in the country, and of increased facilities for obtaining justice. But much of the increase was also due to the improved administration of the department and to the special measures taken to discover and check fraud in the use of stamps. The gross profit of the Provincial Government was roughly 9½ lakhs in 1877-78, 6¾ lakhs in 1878-79, 11½ lakhs in 1879-80, 8 lakhs in 1880-81, and 11¾ lakhs in 1881-82. The fixed grant for managing this department of the revenue was Rs. 2,38,000. The actual cost was Rs. 2,48,000 in 1877-78 and Rs. 2,51,000 in 1878-79. It amounted to Rs. 4,24,000 in 1881-82. The increase in the first year corresponds with the increase in the receipts. Larger sales of stamps must be attended by increased charges for discount. The increase in the later years was due to the transfer of the actual cost of the stamps from the head of "Stationery." The fixed grant under "Stationery" for both stamps and stationery was Rs. 4,98,000. The actual expenditure on both was Rs. 6,89,000 in 1878-79.

21. Under *Registration* the receipts steadily increased, though the progress was not so rapid in the later as it was in the earlier years. The figures from 1878-79 included Record-room receipts and Land Registration fees transferred from Land Revenue. The Registration receipts proper were Rs. 6,61,000 in 1877-78, Rs. 8,70,000 in 1878-79, Rs. 9,09,000 in 1879-80. They were only Rs. 3,66,978 in 1871-72, the first year that the revenue was under Provincial management. With increased receipts there was naturally an advance in the charges for commission on fees, by which most of the Sub-Registrars are remunerated.

22. *Law and Justice* was the third of the branches of revenue surrendered in 1877 for a progressive payment. The actual receipts in 1876-77 were Rs 7,30,000. The revenue was surrendered to the Provincial Government for a payment rising by ¼ lakh a year from Rs. 7,25,000 in 1877-78 to Rs. 8,25,000 in 1881-82. The actual receipts were Rs. 8,05,000 in 1877-78, Rs. 10,52,000 in 1878-79, and Rs. 10,80,000 in 1879-80, while they rose to Rs. 17,17,000 in 1881-82. The increase in the revenue was chiefly under the head of Fees, and corresponded in some measure with the increase under Stamps. The falling off in the later years is explained by the new procedure already alluded to in connection with stamps. The expenditure under Law and Justice showed a large increase from Rs. 63,77,000 in 1877-78 to Rs. 87,43,000 in 1881-82. The fixed grant for this service under the five years' settlement between the Imperial and Local Government is Rs. 62,97,000. There was thus a heavy charge on Provincial Funds. It was, however, precisely in order that the Local Government might have the means of providing for improved administration, involving increased expense, that improveable revenue was made over to it. The Lieutenant-Governor was able to strengthen the Subordinate Executive Service, and to increase the number of munsifs to meet the growing wants of the country in the administration of Civil Justice.

23. Under *Jails* the receipts were Rs. 6,89,000 in 1877-78. They amounted to Rs. 6,96,000 in 1879-80. The charges, on the other hand, rose from Rs. 16,51,000 in 1877-78 to Rs. 18,41,000 in 1879-80. For 1880-81 they are estimated at Rs. 17,00,000, and for 1881-82 at Rs. 22,52,000.

24. The fixed grant for the charges on account of *Land Revenue* made in 1877 was Rs. 22,62,000. With the charges which this was intended to cover were amalgamated others, chiefly for sub-divisional establishments, which were originally Provincial. The gross cost of all in 1876-77 was Rs. 23,53,000. The growing wants of the administration, however, since carried the expenditure far beyond this limit. A grant of Rs. 1,80,000 was made for the management of Government estates. Establishments were strengthened and made more efficient, and additions were sanctioned to the staff of Deputy Collectors.

25. The expenditure on *Education* was Rs. 19,58,000 in 1871-72. This included the charges in Assam. In 1875-76 the expenditure in Bengal amounted to Rs. 26,32,000. In the next year Sir Richard Temple under financial pressure reduced the expenditure to Rs. 24,48,000. Sir Ashley Eden was able to make full provision for the needs of this important department. He replaced one lakh of rupees reduced from the grant for Primary Education in 1876-77, and the gross expenditure allowed for 1881-82 was the liberal sum of Rs. 27,76,000.

26. In the *Medical* administration important savings were made. The management of the Metropolitan Hospitals was reformed and much waste of public money prevented. Government aid to dispensaries in the interior no longer took the form of a free supply of expensive instruments and drugs, and careful management ensued from the responsibility thus thrown on the directing Committees. The charges which amounted to Rs. 14,86,000 in 1875-76, Rs. 13,63,000 in 1876-77, and Rs. 13,85,000 in 1877-78, were reduced to Rs. 12,31,000 in 1878-79 and Rs. 10,75,000 in 1881-82. With this reduction in cost there was an increase in the number of persons actually receiving medical aid.

27. It will be convenient to consider together the figures under *Public Works* and the figures of the *Interest* payable on the capital invested in them. In 1877 the following works were made over to the management of the Government of Bengal with the responsibility for the payment of the interest charges on the capital expended on their construction:—Northern Bengal Railway, Tirhut Railway, Nalhati Railway, Orissa Canals, Midnapore High Level Canal, Hidgellee Canal, and Sone Canals. The Calcutta and South-Eastern Railway was also made over; but as this line had been making barely sufficient to cover the working expenses, no interest was charged on the capital. The amount of capital expenditure on which the Provincial Government was liable for interest up to the end of 1877-78 was—

	Rs.
Railways	2,10,17,000
Canals	4,56,43,000
	6,66,60,000

The sum due for interest on this capital was Rs. 30,00,000; but in consideration of the short levy of Public Works Cess, the Government of India only took Rs. 20,00,000 in that year. In 1878-79 the capital expenditure on Railways was Rs. 66,41,000 chiefly on the extension of the Northern Bengal line and the construction of the Patna and Gaya line. The expenditure on Canals was Rs. 25,44,393. In 1879-80 the expenditure was Rs. 22,12,000 on Railways and Rs. 16,14,000 on Canals. Of the first sum, however, Rs. 3,15,000 was provided from Provincial Funds in order to expedite the completion of the Patna-Gaya line. In 1881-82 the expenditure on Railways amounted to Rs. 30,34,000. chiefly for the extension of the Tirhoot line to Bettiah on the west and Peepra Ghât on the east, and Rs. 36,60,000 for expenditure on Canals.

28. In 1877-78 the receipts under *Railways* amounted to Rs. 7,32,000 and the charges to Rs. 6,26,000, while the charges for interest amounted to Rs. 8,26,000. The Northern Bengal line was only opened from Porada to Jalpaiguri in January 1878; and the extensions from Parbatipur to Rangpur and from Siliguri to Jalpaiguri were only ready for traffic, the former in July and the latter in November 1878. The Patna-Gaya line and the extension of

the Northern Bengal line to Kaunia on the Teesta were opened for traffic in June 1879. In 1880 the Lieutenant-Governor was permitted by the Government of India to begin, as a Provincial work, the construction of a line from Sonapore on the Calcutta and South-Eastern line to Mugra Hát, an important mart in the 24-Parganas district, and a sum of Rs. 2,20,000 was expended upon it from Provincial Funds. This line was constructed on the broad gauge, and was afterwards extended to Diamond Harbour. The estimates for 1881-82 included a charge of Rs. 7,50,000 for expenditure on this line. Provision was also made for the expenditure of Rs. 4,50,000 for preliminary work on a line to connect Parbutipur on the Northern Bengal Railway with the important town of Dinajpur, and of two lakhs for raising and bridging the road from Mugra to Diamond Harbour to make it available for railway extension.

29. The *Canals* which were taken over by this Government in 1877 were financially of a very different character from railways, and there was no hope of their being in a position to pay the interest on the capital invested in them for many years to come. The construction of the Orissa, Midnapore, and Hidgelee Canals was originally undertaken in 1863 by the East Indian Irrigation and Canal Company, with the most extravagant expectations of profit. Five years after the work had been begun, the Government of India purchased the canals from the Company for Rs. 1,17,28,560, and proceeded to develop a modified scheme. Up to the present these works have been a heavy drag on Provincial resources, which have to bear the charges. The receipts from irrigation on the Orissa and Midnapore Canals, however, show a steady increase; leases are taking the place of yearly agreements; and, as the system of distributaries is extended, it is hoped that the revenue will gradually develop. The opening of the Sone Canals gave a great impetus to the extension of sugarcane cultivation, and caused a considerable increase in the agricultural wealth of the tracts supplied. The Commissioner, in 1879-80, estimated the increase of profit derived from this source by the people of Shahabad at Rs. 4,73,000 per annum.

30. The following table shows the net receipts from each work during the period 1877-82, with the interest charges payable in each year:—

	1877-78.	1878-79.	1879-80.	1880-81.	1881-82.
	Rs.	Rs.	Rs.	Rs.	Rs.
Orissa Canals ...	—54,970	—57,090	—96,996	—40,000	(—)1,06,000
Midnapore " ...	—33,730	—2,120	92,822	27,000	22,000
Hidgellee " ...	81 720	87,610	3,500	29,000	19,000
Sone " ...	—1,51,110	67,120	1,74,291	6,000	2,79,000
Total net receipts ...	—2,08,090	45,520	1,73 614	22,000	2,14,000
Interest charges ...	20,03,270	21,20,416	22,04,767	22,75,000	20,75,000

31. Apart from these schemes, the Government of Sir Ashley Eden also undertook other irrigation and canal works from Provincial Funds. A sum of Rs. 6,28,000 was spent on a canal to connect the river Gunduk with the principal water-courses of the Saran district. A still more important work was the Joojooty Scheme, whereby a constant supply of pure water from the river Damoodah was poured into old channels in the Burdwan and Hooghly districts. The silting up of these channels was undoubtedly for many years the cause of much disease and suffering throughout a large tract of country, and the introduction of a copious supply of pure water for drinking and irrigation purposes was expected to have a marked effect on the health and prosperity of the people. With the admission of the river water there was an almost entire disappearance of the epidemic which so long raged among the villages situated on the banks of the silted-up channels in the Hooghly district. It was calculated that nearly nine-tenths of the inhabitants of these villages were swept away in the epidemic which prevailed before 1877. The beds of these water-courses were studded with pools of stagnant water, which, as the dry season advanced, became more and more fœtid and noxious, and spread disease and death among the people who consumed the fluid. At the same time the drainage of the country was obstructed by the endeavours of the people to collect and retain water for agricultural purposes.

32. Sanction was also given to the construction, from Provincial Funds, of a navigation canal to connect the existing tidal canal in Hidgellee with the Orissa system. This was a work of the first importance. Orissa was then wholly

dependent on the sea for its communications with Bengal; the coasting trade could only be carried on by large vessels; the ports were bad; and if any serious failure of the crops occurred, it was impossible to throw a sufficient supply of food into the province. The projected canal was intended to bring Orissa into direct inland communication with Bengal, so that steamers and country boats would be able to ply at all seasons of the year, and while the province will be protected from famine, a large expansion of trade might be confidently expected.

33. It is not possible to make any useful comparison of the expenditure under *other Public Works* before and after the contracts of 1877. The expenditure on works during the scarcity of 1874 was abnormal, the Provincial balances were exhausted, and the Government of India found it necessary to accept the outlay, and to make the local Government a net grant of five lakhs with which to begin the year 1876-77. The expenditure on Ordinary Public Works during that year was Rs. 25,59,000. In 1877-78 Sir Ashley Eden found it necessary to proceed with extreme caution in the matter of expenditure. The charges thrown upon the Provincial revenues on account of Productive Public Works were very serious; the full outturn of the Public Works Cess could not be obtained during the year; and he recognized the necessity of securing a substantial working balance to provide for emergencies. The expenditure in this year was therefore restricted to Rs. 25,12,000. In framing the revised estimates for 1878-79, the Lieutenant-Governor found it possible to make provision for various important and useful schemes that had been left in abeyance for want of funds; but in this year and the next the expenditure was, under instruction, kept down in consequence of the financial difficulties which famine, war, and adverse exchange had brought upon the Government of India. In 1879 the Government of India found itself compelled to call upon Local Governments to make all possible reductions in expenditure. The orders went so far as to direct that no new work estimated to cost more than Rs. 2,500 should be commenced, even though it might have already received the sanction of Government. In order to avoid the necessity of peremptorily putting a stop to works, the Lieutenant-Governor offered a special contribution of 20 lakhs to Imperial Funds. Under the influence of the same policy of retrenchment unduly low estimates were made for 1880-81, but the Lieutenant-Governor was afterwards permitted by the Government of India to increase the grant by 20 lakhs, and the expenditure during the year was Rs. 47,60,000. In 1881-82, the Public Works expenditure aggregated Rs. 67,58,000 and included, besides miscellaneous improvements on buildings, and on the construction, bridging, and metalling of Provincial roads, provision for new Court-houses at Sealdah, Jessore, Mymensingh, Dacca, Ranchi, Gaya, Darbhanga, and Motihari, for various sub-divisional buildings and Munsifs' Courts, for new Jails at Jalpaiguri, Bogra, Pabna, Gaya, Darbhanga, and Motihari, for a college at Rampur-Boalia, and a Railway school at Kurseong, and for the completion of the new Secretariat buildings and the new Obstetric Hospital at the Medical College.

34. That the system of decentralization was up to this time thoroughly successful in Bengal is sufficiently clear from the foregoing sketch. The revenues increased rapidly, independently of any new taxation; useless expenditure was curtailed; and funds were made available for improvement under all branches of the Administration. The three heads of improveable revenue made over to the management of the Provincial Government, with an income of 165¼ lakhs in 1876-77, showed an income of not less than 213 lakhs in 1881-82. In the meanwhile, the Government was able to carry out numerous works of improvement, many of which, under the previous system, would have been indefinitely postponed. Besides making a special contribution of 20 lakhs to the Imperial treasury in time of need, means were found during these five years to increase the staff of executive and judicial officers; to provide increased facilities for the administration of justice; to increase the grant for education; to make grants-in-aid of district communications, and of works of drainage, sanitation, and municipal improvement; to build schools, colleges, and hospitals; to replace the huts in which the public business was transacted, or prisoners were confined, by substantial masonry court-houses and jails; to spend 20 lakhs on railways which have since brought in a large return, 5½ lakhs on tramways, ¾ of a lakh on a steamer service to improve communications with Assam, and 2 lakhs on a road to develop the trade with Thibet; to lay out 11 lakhs on the first portion of a work which will develop the trade of Orissa and protect it from famine;

and to devote 38¼ lakhs to improving navigation and providing a supply of pure water for the people. While 77½ lakhs were thus expended on great measures of material improvement, and the expenditure on Ordinary Public Works was increased from Rs. 25,12,000 in 1877-78 to Rs. 67,58,000, exclusive of expenditure on preliminary works of railway construction, in 1881-82, and while no legitimate outlay was spared to strengthen every department of the Administration, the five years' period, which opened with a credit balance of Rs. 2,88,000 only, closed with a credit balance of Rs. 75,43,000. When it is recollected that under the system which prevailed before 1871 every new charge required the sanction of the Imperial Government, that the decision on the demands of each province took no cognizance of the extent to which it had contributed to the general Exchequer, that nothing was to be gained by economy, because money left unspent by any one Government was practically lost to it, and only went to increase the amount to be scrambled for by all, some idea may be formed of the advantages which Bengal had reaped up to this time from the control of its own finances.

25. The principal features of the contract of 1877 have been described above. The Local Government was allowed, as in the first contract of 1870, to appropriate the whole of the receipts under the heads of Police, Jails, Registration, Education, Medical, Printing, Roads and Civil Buildings, and received in addition a gross annual allotment of Rs. 1,10,59,000 to meet the charges on account of these departments. The receipts from *Excise*, *Stamps*, and *Law and Justice* (proper) were also made over to the Provincial Government in consideration of a payment to the Imperial Treasury of lump contract sums, which were to increase by one lakh per annum in the case of Excise, and 2¾ lakhs per annum in the case of Stamps and Law and Justice. The following heads of revenue were also made over in return for fixed contract payments, viz., *Customs* (miscellaneous receipts), *Salt* (minor items), *Marine* and *Miscellaneous*. On the expenditure side, the Local Government was entrusted with the management of the following heads of expenditure, receiving in each case an annual grant of fixed amount:—*Refunds* of the assigned revenues, *Land Revenue*, *Excise*, *Customs*, *Salt*, *Stamps*, *Administration*, *Minor Departments*, *Law and Justice*, *Marine*, *Miscellaneous*, and one or two smaller items. Simultaneously—and this was one of the most important elements of the contract—the gross receipts of certain railways and canals which had been, or were to be, constructed with borrowed capital were transferred to the Local Government, which also became responsible for the working expenses of the same and for the payment to the Imperial Government of the interest charges on the capital with which they had been constructed. As these interest charges were expected to exceed considerably the net earnings of the works thus provincialised, the Lieutenant-Governor was authorised to impose special provincial taxation to make up the deficiency, and to this end the Public Works Cess was imposed by Act II (B.C.) of 1877. The provincialisation of these charges for interest, and the introduction of the Public Works Cess, formed integral parts of Sir John Strachey's scheme of famine finance.

26. The contract of 1877 thus fell naturally into three parts—(1) in respect of the branches of service which had been provincialised by Lord Mayo, the old principle was retained: a fixed annual grant was made from Imperial revenues, which, together with the receipts of those departments, was expected to cover their expenditure, any growth of charges being provided for from the increase in the receipts. (2) In respect of the civil heads of revenue and expenditure then provincialised for the first time, a separate contract was made for each head of revenue and for each head of expenditure; the rates of increase in the payments on account of the revenue from Excise, Stamps and Law and Justice being advisedly taken at a low figure, so as to leave the Local Government a margin wherewith to meet the normal growth of civil expenditure for which no direct allowance was made. (3) In respect of public works constructed from borrowed capital, the Lieutenant-Governor was authorised to resort to local taxation to make good the deficit of interest charges in excess of net earnings.

27. The contract, which came into force in 1882, differed materially from that which it succeeded. The principles on which it proceeded were the following:—

Contract of 1882—87.

Instead of giving the Local Government a fixed sum of money to make good any excess of provincialised expenditure over provincialised receipts, a certain proportion of the Imperial revenue was devoted to this object. A few heads

were reserved as Imperial; others were divided in proportions, for the most part equal, between Imperial and Provincial; the rest were made Provincial. The balance of transfers, being against the Local Government, was rectified by a fixed percentage on its Land Revenue otherwise reserved as Imperial. At the same time a distinct declaration was made of the policy to be followed during the term of the contract. The Imperial Government was to make no demand on the Local Government, except in the case of disaster so abnormal as to exhaust the Imperial reserves and resources, and to necessitate a suspension of the entire machinery of public improvement throughout the Empire. On the other hand the Local Government was to look for no special aid from the Imperial Government, except in the case of severe famine, and then only within the following limits:—(1) current income must have been exhausted, every avoidable expense in every department having been retrenched, and the public works grants applied to famine work to the very utmost possible; (2) savings of past years in excess of the ordinary working balance must have been drawn upon to two-thirds of their total amount; (3) the margin of Provincial surplus in normal was made be liable for the completion of works begun as relief works, and where there was no need of such completion, was to be chargeable up to one-fourth at most for payment of interest on any Imperial loans which may have been raised to meet the excess cost of the famine in general.

28. The following were the principal additions made to the provincial receipts and charges under the new scheme:—This Government was admitted to a half share in the receipts from Forests and Assessed Taxes, and took all the receipts under the heads of Superannuations, Miscellaneous, and Other Public Works, except contributions from the military and medical funds; gain by exchange on Imperial transactions, premium on bills and unclaimed bills of exchange; receipts from military works; and any unspecified miscellaneous receipts exceeding Rs. 10,000. Under Forests and Assessed Taxes it was liable for half the charges. The Imperial Government only retained under Land Revenue the same percentage on charges for collection and on the cost of surveys and settlements as was retained of land revenue. To the existing provincial charges was added under Law and Justice and Medical all that was reserved as Imperial; under Stationery and Printing all except the cost of stationery purchased from central stores; and under Other Public Works, the charges for Museums, Educational Buildings, and Light-houses. On the other hand, one-half the net receipts from Excise, Stamps, and Registration, including record-room fees, was surrendered to the Imperial Government. The percentage of Land Revenue was, however, only calculated after allowing for the claim of the Government of India to share in the general improvement that had resulted to the Provincial revenues during the five years then just expired. That share was fixed at 30 lakhs a year. From this the Government of India deducted three lakhs to be expended on the improvement of the Subordinate Executive and Judicial Services and the establishment of the new district of Khulna. In order, too, that the Local Government might not be embarrassed by a sudden reduction of 27 lakhs in its income, His Excellency the Governor-General in Council added a sum of 28½ lakhs to the credit balance of the Province for 1881-82.

29. The amount of percentage of Land Revenue which, under the new scheme was assigned to this Government, was calculated, as stated above, upon the basis of the regular estimate for the year 1881-82. It was fixed at 32·2284. A sum of Rs. 30,00,000 was, on account of the annual contribution to the Government of India, added to the Provincial deficit, provision being at the same time made for an additional expenditure of three lakhs for the improvement of the Subordinate Civil Service and for a new district of Khulna.

30. The chief points in which the contract of 1882 differed from that of 1877 were the following:—*First*, the excess of provincialised expenditure over provincialised receipts was balanced, not by an annual allotment of fixed amount, but by a fixed percentage of the land revenue of the Province. Inasmuch as the receipts credited under Land Revenue are to some extent capable of improvement, and ordinarily show a tendency towards steady, if small, increase, this change was to the advantage of the Local Government. *Secondly*, the Local Government was no longer permitted to appropriate the whole of the increase in the three principal sources of improvable revenue, viz., Excise, Stamps, and Registration. Under the former contract, the increase which the Loca

Government had to surrender was only one lakh of rupees per annum under Excise, 2¾ lakhs per annum under Stamps (combined with Law and Justice), and *nil* under Registration; whereas the actual rate of increase averaged nearly six lakhs per annum under Excise, 4¾ lakhs under Stamps and Law and Justice, and Rs. 90,000 under Registration. Under the old contract the whole of this profit went to the Local Government: under the new arrangement one-half went to the Government of India. This change operated greatly to the disadvantage of the Provincial revenues, whose expansive power was thereby largely diminished.

31. The *third* point of difference between the contracts of 1882 and 1877 lay in the extension of the interest of the Local Government to the revenue heads of *Assessed Taxes* and *Forests*, and to the receipts and expenditure under *Superannuations*, and certain sub-heads of branches of service of which the bulk was already Provincial.

32. The last important point of difference was that the contract of 1882 was a *consolidated* contract. In other words, no attempt was made to estimate the future receipts and expenditure under separate heads and to fix distinct assignments for each. The new arrangements were applied to the revised estimates for 1881-82 as a whole; the total receipts were compared with the total expenditure; and (after making a deduction of 27 lakhs from the Revenue side, being the share of the profit on the old contract which the Imperial Government decided to appropriate) the adjusting percentage of Land Revenue was calculated so as to balance the account.

33. following statements show the actual receipts and expenditure of the period 1882-87.

Irrigation (capital) ...	19,29,000	8,40,000	2,18,000

35. The figures shown in the last paragraph against *Land Revenue* receipts are the net sum credited to Provincial after all adjustments had been made. Eliminating these, we get the following result :—

	Contract estimate.	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Land revenue proper ...	1,21,34,000	1,22,28,000	1,22,20,000	1,20,60,000	1,24,28,000	1,24,97,000
Grant for Government estates	1,95,000	3,94,000	3,69,000	3,94,000	3,85,000	4,25,000
Total ...	1,23,29,000	1,26,22,000	1,25,89,000	1,24,54,000	1,28,13,000	1,29,22,000

36. When it is remembered that only a small part of Bengal is temporarily settled, and that 1884-85 and 1885-86 were years of unfavourable harvests, the improvement seems fairly satisfactory. The improvement on the grant for the management of Government estates (which was then fixed at 10 per cent. on collections and has since been raised to 12) was much greater than in the case of Land Revenue proper. This, however, did not represent any real relief to the Provincial revenues, as the whole amount of this grant was devoted to the improvement of the estates in question.

37. The expenditure charged under *Land Revenue*, which was wholly Provincial (except the charge for Surveys and Settlements, which was divided in the same proportion as the receipts are divided), rose from Rs. 28,91,000 to Rs. 35,00,000, or by Rs. 6,09,000 in five years. The chief causes of increase under this head were the creation of the district of Khulna, the improvement in the pay and position of the Subordinate Executive Service (half of whose salary is shown against Land Revenue, and half against Law and Justice), and the additional expenditure on Government estates, which was balanced by the higher receipts referred to in the last preceding paragraph. The pay of the Directorship of Agriculture, which was sanctioned in 1884 temporarily for two years, was also shown under this head, as well as the Provincial share of the survey of Muzaffarpur under the Tenancy Act. These two items, which were not in existence when the contract was made, alone account for Rs. 1,12,000 of the total increase.

38. Under the head of *Stamps*, the development of he revenue was steady and continuous. The total receipts, which had risen from Rs. 1,08,15,000 in 1877-78 to Rs. 1,20,24,000 in 1881-82, again rose to Rs. 1,32,58,000 in 1885-86, and to Rs. 1,34,63,000 in 1886-87. The contract estimate of receipts (Provincial share) was taken at 59 lakhs, while the actuals were Rs. 61,07,000, Rs. 62,88,000, Rs. 64.96,000, Rs. 66,29,000, and Rs. 67,32,000 respectively. The profit of the Local Government on the contract under this head was therefore about 2 lakhs in the first year, $3\frac{3}{4}$ lakhs in the second, 6 lakhs in the third, $7\frac{1}{4}$ lakhs in the fourth, and $8\frac{1}{3}$ lakhs in the fifth. The increase was uniformly distributed over the whole period of the contract. There was no legislation during this period affecting the

stamp laws, but a material portion of the improvement in the revenue was undoubtedly due to the arrangements under which process-serving fees in revenue courts, and copying fees, were levied in court-fee stamps instead of in cash. To the former cause at least Rs. 50,000 of the increase in 1884-85 were due, and larger sums in the following years. The remainder of the increase, of which two lakhs came under non-judicial stamps, and upwards of 10 lakhs under court-fees, was attributable to improved administration and greater facilities for obtaining justice. The expenditure of this department, the contract grant for which was fixed in 1881-82 at Rs. 2,17,000, was Rs. 2,14,000, Rs. 2,20,000 Rs. 2,34,000, Rs. 2,46,000, and Rs. 2,43,000 in each year of the contract, the ultimate increase being only Rs. 26,000. More than half of this increase, small as it is, was due to the greater cost of the new description of court-fee stamps introduced during 1884-85 for greater security against fraud. The direct cost of raising the stamp revenue in Bengal was slightly over 3¾ per cent.

39. Under the previous contract, the extraordinary development of the revenue from *Excise*, and the consequent profit to the Provincial revenues, were among the most striking features of the financial history of the period. Between 1877-78 and 1881-82 the receipts from this source rose from Rs. 68,68,000 to Rs. 93,74,000, or by close upon 25 lakhs of rupees; and the whole of this, except 4 lakhs, represented clear gain to the Local Government. Simultaneously the corresponding charges were reduced by improved administration from Rs. 3,06,000 to Rs. 2,73,000. This remarkable increase was due partly to the outstill system, the general adoption of which dates from the first year of Sir Ashley Eden's government and also to the bumper harvests, the activity of trade, and the general prosperity of the country which marked the three years 1879-80, 1880 81, and 1881-82.

40. A serious check in the excise revenue was anticipated by Sir Ashley Eden, and his anticipations were fulfilled to the letter. The flood tide of commercial and agricultural prosperity reached high-water mark in 1883, and the ebb was swift and extreme. The rainfall in that year was deficient and unevenly distributed; and though no actual distress occurred at that time, the advance in the price of food and the recession in the wages of labour in the western districts injuriously affected the settlements of the outstills, which are highly sensitive to seasonal influences. The revenue from country spirits in 1884-85 fell short of that of the previous year by Rs. 1,13,000 (the decrease being almost entirely in the Patna Division), and this would have been more than doubled but for a large apparent increase of Rs. 1,28,000 in Calcutta, which represented advance payments for the triennial period 1884-87. In 1884 and 1885 the rainfall was again unfavourable in quantity and distribution, and the failure the crops was so serious in parts of the Burdwan, Presidency, and Rajshahi Divisions as to exhaust the reserves of the villagers and necessitate the opening of relief works by Government. In 1883, a Commission was appointed under the presidency of Mr. Edgar, C.S.I., to enquire into the working of the outstill system and its chief recommendations were approved by Government and carried into effect. The Sadar distillery system was re-introduced into all considerable towns where country liquor is the principal alcoholic drink of the people. These include Patna, Gaya, Arrah, Chapra, Bettiah, Muzaffarpur, Darbhanga, Monghyr, Jamalpore, Bhagalpur, Murshidabad, Berhampore, Burdwan and Dacca. The hours of working and sale were contracted. The sale of liquor to children was rigidly prohibited. District officers were instructed to allow District and Municipal Boards a voice in the selection of sites and other matters of local interest; and a large addition was made to the supervising and detective staff including ten Special Deputy Collectors, who were selected for their knowledge of and aptitude for excise work, and who were employed on that work alone. The increase of expenditure incurred in giving effect to these proposals was considerable.

41. The head of *Provincial Rates*, which is wholly Provincial, represents principally the proceeds of the Public Works Cess, but it includes also the rates for the general management of Wards' and Attached estates, and from October 1886 the recoveries from District Funds of the proportional cost of collecting Road Cess. The contract estimate of receipts was taken in 1881-82 at Rs. 35,40,000, and the actuals in each year were Rs. 36,07,000, Rs. 38,15,000, Rs. 37,65,000, Rs. 38,71,000, and Rs. 39,95,000. The profit of the Local Government was

therefore Rs. 67,000 in 1882-83, Rs. 2,75,000 in 1883-84, Rs. 2,25,000 in 1884-85, Rs. 3,31,000 in 1885-86, and Rs. 4,55,000 in 1886-87. This increase was due to revaluations which were in progress in almost every district during the period of the contract.

42. The head of *Assessed Taxes*, which was wholly Imperial under the former contract, and was equally divided between Imperial and Provincial in the contract of 1882, represents the receipts of the abolished License-tax. The Income-tax was at first wholly Imperial; and the figures shown under this head for 1886-87 merely represent the grants made by the Supreme Government—of amounts equal to those credited to Provincial in 1885-86—to avoid the disturbance of the contracts The depression of trade, which marked the greater part of the period 1882—87, and which was intensified for Bengal by special causes, such as the through opening of the Rajputana-Malwa State Railway in the latter part of 1881, and the consequent diversion of a part of the trade of Northern India to Bombay, injuriously affected the receipts from this source. The contract of 1882 was framed on the basis of a revenue of Rs. 8,25,000 (Provincial share) from this source, whereas the actuals were Rs. 7,60,000, Rs. 7,59,000, Rs. 7,48,000, Rs. 7,67,000, and Rs. 7,67,000, respectively. The aggregate loss to the Provincial revenues exceeded therefore 3¼ lakhs of rupees during the currency of the contract, notwithstanding that special efforts were made to ensure the accuracy of the assessments, and to prevent the escape of persons legally liable.

43. The Public Works Cess and the License-tax represent the taxation imposed in Bengal (the former being peculiar to the province) in connection with the scheme of "famine finance," with which the name of Sir John Strachey is associated. That scheme proposed to improve the financial position of the Empire to the extent of two crores of rupees a year, of which 50 lakhs were to be regarded as a normal working surplus, while 150 lakhs were to be devoted to famine insurance, being expended either on actual relief, on reduction of debt, or on the construction of remunerative works calculated to prevent or mitigate the severity of famine. Part of this sum it was proposed to provide by new taxation (*i.e.* by the License tax), and part by throwing additional charges on the Provincial Governments; but as far as Bengal is concerned, the whole contribution paid towards the so-called Famine Fund was raised by additional taxation; for the charges thrown on Provincial by the Contract of 1877, which consisted mainly of the interest on provincialized railways and canals, were met by the imposition of the Public Works Cess, which, as already stated, is peculiar to Bengal. The total net sum contributed by Bengal in each year since 1878-79 under these two heads was as follows:—

Net contribution (receipts, less cost of collection).	1878-79.	1879-80.	1880-81.	1881-82.	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Assessed taxes ...	17,21,000	20,88,000	12,18,000	15,43,000	14,26,000	14,22,000	14,02,000	14,46,000	*14,46,000
Provincial rates ...	35,93,000	35,67,000	34,68,000	35,03,000	35,60,000	37,68,000	37,18,000	38,04,000	38,59,000
Total ...	53,14,000	56,55,000	46,86,000	50,46,000	49,86,000	51,90,000	51,20,000	42,50,000	53,05,000

* The substitution of the Income-tax for the License-tax makes it impossible to determine the correct contribution to be paid in 1886-87. But it may be assumed that the License-tax, if continued, would have yielded the same amount as in 1885-86.

44. In 1880-81 the minimum assessable limit was raised to Rs. 500, with the result of exempting about 66,567 assessees of the poorest classes, and giving up about 5¼ lakhs of net revenue. These figures show that since 1878-79, the first year in which the new taxes were in full operation, the people of Bengal paid rather more than half a million sterling per annum as an insurance against famine. During this period the only expenditure in the province on actual relief of famine or the construction of protective works was as follows:—

	1878-79.	1879-80.	1880-81	1881-82.	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.	Total.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Famine Relief	......	......	......	......	62,940	12,760	14,841	1,23,840	Nil.	2,14,381
Protective works, Railways ..	......	......	......	......	Nil.	Nil.	Nil.	Nil.	Nil.	......
Protective works, Irrigation ..	......	......	......	......	Nil.	3,00,000	4,00,000	Nil.	Nil.	7,00,000
Total .	......	......	......	......	62,940	3,12,760	4,14,841	1,23,840	Nil.	9,14,381

45. Under the heads of Forests and Registration, the following figures compare the net revenue in each year with the contract estimate :—

FORESTS.—(*Imperial and Provincial*)

	Contract estimate.	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Receipts ...	6,28,000	6,94,000	6,94,000	5,72,000	5,97,000	6,54,000
Expenditure ...	3,96,000	3,82,000	3,88,000	4,12,000	3,70,000	4,23,000
Net revenue ...	2,32,000	3,12,000	3,06,000	1,60,000	2,27,000	2,31,000
Provincial share .	1,16,000	1,56,000	1,53,000	80,000	1,13,000	1,16,000

REGISTRATION.—(*Imperial and Provincial.*)

	Contract estimate.	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Receipts ...	9,92,000	10,40,000	9,82,000	10,82,000	10,94,000	10,38,000
Expenditure ..	6,09,000	6,28,000	5,58,000	5,94,000	6,01,000	5,62,000
Net revenue ...	3,83,000	4,12,000	4,24,000	4,88,000	4,93,000	4,76,000
Provincial share ...	1,91,000	2,06,000	2,12,000	2,44,000	2,47,000	2,38,000

46. The *Forest* Department in Bengal is of comparatively little importance from a revenue point of view; and during 1882-87 the depression of trade caused a slackness in the demand for timber, especially for railway sleepers. The operations of the five years resulted in a small aggregate profit of Rs. 38,000. From 1883-84 revenue record-room receipts and charges were transferred from Registration to Land Revenue. These averaged about Rs. 85,000 and Rs. 70,000 a year respectively, so that the net revenue under Registration was really about Rs. 15,000 a year more than appears from the above statement. Allowing for this, it will be seen that the net revenue from this source increased in five years from Rs. 3,83,000 to Rs 4,91,000, or by over 28 per cent., while the profit of the Provincial Government amounted to Rs. 2,22,000 during the whole period of the contract. These satisfactory results were due to the steady introduction of rural in place of official agency, and to the increase of registrations consequent on the passing of the Bengal Tenancy Act.

47. Under the heads of *Law and Justice* (proper) and *Jails* the contract worked very unfavourably for the Local Government. On the receipt side the contract estimate was taken at 9 lakhs and 7 lakhs, respectively, the former including an item of 8 lakhs under the subhead of general fines, fees, and forfeitures, while the latter was almost wholly composed of the sale proceeds of jail manufactures. Under the latter head the estimate was realised, except in 1883-84, when the orders of Lord Ripon's Government restricting jail manufactures reduced the receipts from that source to Rs. 6,38,000. The total receipts from jails in each year were Rs. 8,47,000, Rs. 6,48,000, Rs. 7,29,000, Rs. 7,87,000, and Rs. 7,45,000, against the contract estimate of 7 lakhs. The receipts from fees and fines, however, never came up to the estimate, and the total receipts under Law and Justice (proper) were Rs. 8,23,000, Rs. 7,64,000, Rs. 7,55,000, Rs. 7,41,000, and Rs. 7,56,000, against the contract estimate of 9 lakhs. The net loss on the whole contract was about 4 lakhs of rupees. The expenditure on these two branches of the administration rose from a contract estimate (1881-82) of Rs. 88,33,000 to Rs. 96,19,000 in the last year, and the deficit which had to be made up from other sources was Rs. 4,43,000, Rs. 4,85,000, Rs. 5,76,000, Rs. 9,06,000, and Rs. 7,86,000 in each year since the contract was framed. Valuable reforms were carried out in the

Jail Department, including the reorganisation and complete equipment of the personnel of the superior staff, the development of the Central Jails at Dacca and Midnapore, the establishment of a district jail at Khulna, the introduction of warder guards in place of police, the establishment of a new Juvenile Reformatory at Hazaribagh, and the large development of that at Alipore. These measures cost nearly 1½ lakhs per annum. The rise in the price of food increased the expense of dieting prisoners by an equal sum. though the jail population steadily diminished in numbers. During the five years, the pay of the Subordinate Judicial Service was improved at a cost of about 1½ lakhs a year. Seven Subordinate Judges and 12 munsifs were added to the permanent staff, while numerous temporary officers were appointed. Three additional Judges were temporarily appointed to clear off arrears in the High Court. For the rest, the increase in litigation caused a steady continuous increase in the charges for ministerial establishments, for the service of processes, and for the copying of judicial documents.

48. Under the head of *Police* the contract grant was fixed at Rs. 41,32,000, and the actual expenditure in 1881-82 was Rs. 40,87,000. From the beginning of 1882-83, however, the cost of police in mufassal municipalities was assumed by Government, and a charge of about 4½ lakhs per annum, for which the terms of the contract made no provision, was thus added to the Provincial burdens. There was a set off against this of about one lakh under Medical, and half a lakh under Education, on account of various charges which were simultaneously transferred to Municipal Boards; and the net cost of this reform was about 3 lakhs a year since the beginning of the contract. This was increased by Rs. 61,000 a year from the beginning of 1884-85, when by Act IV (B.C.) of 1884 a similar measure of relief was extended to the Howrah and Suburban Municipalites, which since then paid only Rs. 49,000 a year for police, instead of Rs. 1,10,000 a year as formerly.

49. Under *Marine* the net receipts and charges in each year since 1882-83 were as follows:—

	Contract estimate.	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Gross receipts* ..	11,09,000	10,17,000	9,61,000	8,37,000	9,16,000	9,62,000
Charges ...	10,97,000	9,51,000	8,69,000	8,47,000	8,29,000	8,53,000
Net receipts ...	12,000	66,000	92,000	.....	87,000	1,09,000
Net charges ...	......	......	.. ...	10,000	......	......

* Includes in each year a special allotment of Rs. 65,000 for the cost of the *Undaunted*, credited under Land Revenue.

The falling off in receipts was wholly due to the stagnation of trade. In 1881-82, the last year of Sir Ashley Eden's administration, the number of vessels which entered the Port of Calcutta was 1,074, with a total tonnage of 1,808,005, while the number of clearances was 1,058, with a total tonnage of 1,774,084. In both cases the number of vessels and the aggregate tonnage reached the highest figure ever recorded at Calcutta. By 1884-85 the shipping had fallen to 903 entries with a tonnage of 1,729,874, and 923 clearances with a tonnage of 1,745,271, representing the smallest aggregate trade that has visited Calcutta in any year since the opening of the Suez Canal.

Except in respect of pilotage the Bengal Marine Department is of little importance. The only matters of note during the five years 1882-87 were the grant of a subsidy of Rs. 35,000 a year to Messrs. Macneill and Company since 1883-84 for a rapid steamer service between Dhubri and Dibrughar; and a grant of Rs. 10,000 a year to the same firm, for a similar service to Sylhet. In both cases the subsidies were supplementary of similar grants made by the Chief Commissioner of Assam.

50. The expenditure on *Education* was taken in the contract estimates at Rs. 26,77,000. The actual expenditure in each year was Rs. 30,16,000 Rs. 31,55,000, Rs. 34,00,000, Rs. 32,95,000, and Rs. 33,54,000. Up to 1884-85 it was possible to provide annually increasing allotments for this branch of service, but since then the demands of other Departments swallowed up

the scanty increments of the Provincial revenues, and educational expenditure remained stationary. Efforts were, however, made to give effect to the recommendations of the Education Commission. The inspecting staff was strengthened by the appointment of two new Inspectors of Schools, four Joint and Assistant Inspectors, three Deputy Inspectors, and 16 Sub-Inspectors, while the pay of the latter class of officers was raised to Rs. 50 wherever it was less than that sum. These measures were carried out at a cost of Rs. 60,000 a year. The primary grant was gradually raised from 5 lakhs, at which it stood at the close of Sir Ashley Eden's term of office, to 7½ lakhs; while the annual provision for grants-in-aid of schools managed by independent agency was simultaneously raised by upwards of 1⅓ lakhs. The transfer of police charges to Government enabled Municipal Boards to increase their expenditure on education by upwards of Rs. 60,000 a year. The limited resources at the disposal of Government made it impossible to do much in the way of developing technical education, but it was not altogether neglected. The Engineering College at Sibpur was enlarged and developed, and the School of Art in Calcutta was sedulously encouraged, and made rapid strides in the number of its students and the quality of the instruction imparted.

51. The operation of the contract was more keenly felt in the *Public Works Department* than in any other branch of the public service. The Government of India originally proposed to settle the terms of the contract on the basis of a normal expenditure of 75 lakhs a year for public works of all kinds, including the maintenance, repair, and working expenses of all railways and canals, the construction of new works, and the construction, maintenance and repair of civil roads and buildings, but exclusive of interest charges. Sir Ashley Eden strenuously urged that the grant should not be less than 99 lakhs, the average of the preceding three years, but eventually the offer of the Government of India was accepted with the modification that a lump sum of 15 lakhs, equivalent to 3 lakhs a year, was credited to the Local Government.

52. The following table shows the actual expenditure incurred in each year since 1881-82:—

	1881-82.	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
State Railways (Capital).	11,32,000	18,49,000	8,27,000	1,32,000	51,000	58,000
Subsidised Railways	......	11,000	40,000	58,000	26,000	1,000
Irrigation (Capital)	22,09,000	17,18,000	5,03,000	2,02,000	3,77,000	2,18,000
Civil works ...	66,87,000	66,82,000	45,75,000	27,15,000	27,27,000	38,85,000
Total ...	1,10,28,000	1,02,60,000	59,45,000	31,07,000	31,81,000	41,62,000

53. The dwindling of the grants under every head was most striking. During the first two years of the contract funds were provided, though with difficulty, for the Dinajpur branch of the Northern Bengal State Railway, and for the completion of the Diamond-Harbour branch of the Calcutta and South-Eastern Railway, the whole cost of which was found from Provincial revenues. With the completion of these works, the construction of railways from Provincial funds was entirely suspended, the small sums shown in 1884-85 and subsequent years being merely on account of the Kaunia-Dhurlla State Railway which is a Provincial work. In respect of irrigation works, the course of events was almost precisely similar. No new work of any kind was undertaken during the term of the 1882—87 contract, and it was with the utmost difficulty that funds were provided for the improvement of the Calcutta canals, and the prosecution of the Orissa Coast Canal, both of which works had been undertaken during Sir Ashley Eden's term of office. The Orissa Coast Canal, designed to place Orissa in inland communication with Bengal, and likely to be of the highest value in the event of famine, was begun in 1881. The final opening of the canal was delayed in consequence of unexpected difficulties in locking the Burrabulong river, and of the damage done by the cyclone of September 1885, which also caused the estimates to be exceeded. This work was admittedly *protective* in its nature, and its

importance chiefly consists in the security it is calculated to afford against famine. Yet the only assistance which the Bengal Government received in its construction from the Famine grants consisted of two grants of three and four lakhs respectively, given on the condition that the Imperial Government should share proportionately in the receipts. The whole of the remainder of the cost, which was expected to amount to nearly 40 lakhs, was provided from Provincial Funds, and nearly 20 lakhs of this were found during the currency of the contract.

54. During the first two years of his administration, Sir Rivers Thompson endeavoured to provide for the completion of works in progress and to meet the demand for new works to the full extent of the balance at credit of the Province. The offices of the Bengal Government in Calcutta were completed, court-houses were completed or constructed at Jessore, Mymensingh, Faridpur, Pabna, Gaya, Ranchi, and Darbhanga; jails at Dacca, Midnapore, Buxar, Gaya, Ranchi, Darbhanga, Bogra, Mymensingh and Purulia; the Secretariat offices at Darjeeling since converted into the Deputy Commissioner's Court were begun; numerous sub-divisional court-houses and munsifis were constructed, and a variety of miscellaneous public improvements carried out. By the end of 1883-84, however, the Provincial balances had been reduced to Rs. 6,87,000, and at this juncture the Secretary of State issued orders that they should not ordinarily be allowed to fall below 20 lakhs. The Public Works grant for 1884-85 including Civil Works in charge of Civil Department was therefore restricted to 30 lakhs; and that for 1885-86 was, under pressure of the complications on the North-West frontier, cut down to Rs. 27,85,000.

55. Sir Rivers Thompson's power of making contributions from the Provincial revenues in aid of public objects was greatly circumscribed by financial pressure. The expenditure in no one year exceeded Rs. 3,20,000, and averaged about 2½ lakhs a year; and when it is remembered that nearly 1½ lakhs a year represent compulsory payments of an official nature, the available balance is seen to be exceedingly small. Nevertheless, it was found possible to give grants of Rs. 50,000 each to the municipalities of Burdwan, Bhagalpur, and the Suburbs of Calcutta in aid of local schemes of water-supply; of Rs. 46,000 to the District Road Committee of the 24-Parganas; of Rs. 55,000 to that of Champaran; and of Rs. 20,000 to that of Nadia, for feeder roads; of Rs. 30,000 to the Darjeeling Municipality for the construction of a market, a wire tramway for the removal of rubbish, and other local works; of Rs. 10,000 for the improvement of the town of Chittagong; of Rs. 15,000 for drainage works in Serampore; and of numerous smaller amounts to District Road Committees and Municipal Boards for miscellaneous objects. The Lieutenant-Governor also gave large grants from the balance of the Wahabee Fund for the improvement of the town and district of Patna, including a sum of Rs. 30,000 for a much needed road from the city chowk to the Railway Ferry Ghat, and a grant-in-aid of Rs. 10,000 towards the Anglo-Arabic School established for the special encouragement of Muhammadan education.

56. The following table shows the net financial result of the working of all Provincial *Railways* and *Canals*, whether technically classed as Productive Public Works or not, during each year from 1881-82 to 1886-87.

RAILWAYS.

	1881-82.	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.
	Rs	Rs.	Rs.	Rs.	Rs.	Rs.
Gross receipts ...	32,70,000	37,88,000	41,24,000	43,10,000*	45,03,000	53,02,000
Working expenses	19,03,000	20,40,000	25,00,000	30,72,000	30,39,000	31,43,000
Net earnings ...	13,67,000	17,48,000	16,24,000	12,38,000	14,64,000	21,59,000
Interest ...	12,86,000	14,14,000	15,94,000	17,15,000	19,07,000	20,68,000

Net loss ...	......	......	......	4,77,000	4,43,000	......

* From the 1st July 1884, the Calcutta and South-Eastern Railway was resumed by the Imperial Government, and its receipts and charges disappear from the Provincial account. A lump sum of Rs. 22,500 for 1884-85, and of Rs. 30,000 for each succeeding year (credited on this account under Land Revenue) is here added to gross earnings, and the interest charges are also diminished by the amount credited to Provincial on this account.

CANALS.

	1881-82.	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Gross receipts ...	19,55,000	20,72,000	19,62,000	20,85,000	26,17,000	22,26,000
Working expenses	14,51,000	17,97,000	17,44,000	17,93,000	18,39,000	18,05,000

Interest ...	20,75,000	21,16,000	21,61,000	22,13,000	22,49,000	22,73,000
Net loss ...	15,71,000	18,41,000	19,43,000	19,21,000	14,71,000	18,52,000

By the end of 1881-82, when the contract of 1877 came to an end, the total capital expenditure on State Railways in Bengal (exclusive of the East Indian Railway and private lines) amounted to 427 lakhs of rupees, and the mileage of lines open for traffic was 467. Interest, however, was payable only on 336 lakhs, the remainder consisting of Provincial contributions and the capital of the Calcutta and South-Eastern Railway. The principal lines which were then under the control of the Government of Bengal were the Northern Bengal State Railway with an open mileage of 230, the Tirhoot State Railway with 85 miles, the Patna-Gaya with 57 miles, the Calcutta and South-Eastern Railway with 33, and the Kaunia-Dharla (a Provincial railway) with 40. During the five years 1882-87, 19 miles were added to the Northern-Bengal State Railway by the opening of the branch to Dinajpur; the Tirhoot system was practically completed by the construction of branches to Bettiah, Jhinjarpur, and Hajipur, aggregating about 160 miles; a branch of the Calcutta and South-Eastern State Railway was constructed to Diamond Harbour; and an entirely new line, 85 miles in length, was constructed connecting Naraingunj, Dacca, and Mymensingh. A swift daily steamer service was started between Naraingunj and Goalundo on the Eastern Bengal State Railway, and the chief districts of Eastern Bengal were thus placed in close communication with Calcutta. These works cost 147½ lakhs of rupees, of which upwards of 124 lakhs bore interest at 4 per cent., the remainder having been provided from the Provincial revenues. Seventy-eight lakhs and a half were spent on the Assam Bihar State Railway, designed to link the Tirhut and Northern Bengal systems, and including the important bridge across the Gunduck to connect the Tirhut line with the Bengal and North-Western Railway. The early part of the contract of 1882-87 witnessed unusual activity in the construction of railways by private agency. Short branch lines were constructed by private bodies and firms connecting Tarkessur with Seoraphuli on the East Indian Railway and Baidyanath with Deoghur and Rohini. The Central Bengal Railway Company constructed lines aggregating 125 miles in length, connecting Ranaghat on the Eastern Bengal State Railway with Bongong and Khulna; and the Bengal and North-Western Company, receiving a guarantee from the Imperial Government, constructed a valuable and most successful railway, 460 miles in length, from the North-Western Provinces to Sonepore on the Ganges opposite Patna.

57. The table given in the last-preceding paragraph shows that while the gross receipts on the State Railways rose from Rs. 32,70,000 to Rs. 53,02,000 (or, excluding the Calcutta and South Eastern Railway, from Rs. 31,10,000 to Rs. 52,72,000), this improvement was accompanied by so heavy an increase of working expenses and interest that the net loss to the Provincial Government during the five years covered by the contract was Rs. 4,65,000. A considerable part of this was due to the locking up of capital on lines not yet open for traffic, or still in their infancy. For instance, close upon 90 lakhs of rupees was spent upon the Assam-Bihar line. The Bengal Government had to pay 4 per cent. per annum on this capital, which of course represented so much dead weight to be carried by the open lines. Similarly, 64 lakhs were spent on the Dacca State Railway, which, though certain to yield a handsome return ultimately, could do little more during the contract than pay its working expenses. For similar reasons part of the capital expended on the Tirhoot State Railway was only partially

productive. But much of the retrogression was undoubtedly due to the stagnation of trade in the years succeeding 1883-84, combined with the failure of the food grain harvests in parts of Bihar, and of the jute crop in Bengal. The only Provincial railways of importance which were open sufficiently long for a fair comparison are the Northern Bengal, the Patna-Gaya, and the Tirhoot State Railways. The following table shows the capital outlay on each of these lines (both Imperial and Provincial), the gross receipts, working expenses, net earnings, and percentage of earnings to capital, in each year from 1881-82 to 1885-86:—

NORTHERN BENGAL STATE RAILWAY.

	Capital to end of year.	Gross receipts.	Working expenses.	Net earnings.	Percentage of earnings on capital.
	Rs.	Rs.	Rs.	Rs.	
1881-82 ...	2,09,54.000	19.27,000	9,60,000	9,67,000	4·6
1882-83 ...	2,16,52,000	22,80,000	10,72,000	12.08,000	5 5
1883-84 ...	2,25,43,000	21,33,000	12,35,000	8,98,000	3·9
1884-85 ...	2,16,73,000	21,67,000	15,20,000	6,47,000	2·9
1885-86 ...	2,27,72,000	23,39,000	14,70,000	8,69,000	3·8

TIRHUT STATE RAILWAY.

	Capital to end of year.	Gross receipts.	Working expenses.	Net earnings.	Percentage of earnings on capital.
	Rs.	Rs.	Rs	Rs.	
1881-82 ...	1,15,17,000	5,79,000	3,49,000	2,30,000	1·9

1885-86 ...	40,38,000	5,17,000	2,72,000	2,45,000	6

58. The net results of the working of the *canals* under the Bengal Government fluctuated less, chiefly for the reason that deficient rainfall, which tends to contract the traffic on railways, stimulates the demand for water for irrigation purposes. The works managed by the Bengal Government included the Orissa and Midnapore Canals, the Hidgellee Tidal Canal, and the Sone system, which are classed as Productive Public Works; and the Orissa Coast Canal, the Calcutta and Eastern Canals, the Nuddea works, and the Saran and Damoodar Canals, which are not classed as productive.

59. The general financial result of the contract of 1882 may be summarised thus—the revenue, which was estimated at Rs. 3,93,21,000, averaged

Rs. 4,15,52,000, giving an increase of Rs. 22,31,000; the expenditure, which was estimated at Rs. 4,48,53,000, averaged only Rs. 4,26,61,000, being a reduction of Rs. 21,92,000; and the deficit, which averaged Rs. 11,09,000, was met by drawing upon the accumulated balances of the province to the extent of Rs. 55,44,000. The chief branches of revenue which contributed to the increase in receipts were Stamps, Provincial Rates, and Registration; while the reduction in expenditure was almost wholly confined to the Public Works Department, in which the grants for civil works, for capital expenditure on railways and canals, and for irrigation (net charges) were cut down so as not merely to balance the account, but to provide for a large increase of expenditure on Revenue establishments, Judicial Courts, Jails, Police, Education, Superannuations, and the net charges of Provincial State Railways. The contract closed with a credit balance in the Imperial Treasury of only Rs. 19,99,000, which was short by Rs. 1,000 only of the minimum working balance of twenty lakhs which had been prescribed by the Secretary of State.

60. From these figures, and from what has gone before, it may readily be perceived how different was the task imposed on Sir Rivers Thompson from that which fell to the lot of his predecessor. Sir Ashley Eden enjoyed the advantage of a contract, which secured to the province under his control the entire benefit accruing from improved administration, and which in the event yielded financial results surpassing all anticipation. His term of office was favoured with entire immunity from famine and other forms of natural disaster; the commercial torpor then paralysing the industries of the civilized world had not yet spread to India; and a succession of splendid harvests raised the cultivating classes almost into temporary affluence. The ample resources thus unexpectedly brought within his reach he liberally employed in improving many branches of the machinery of Government and in supplying the province with railways, canals, public buildings and other permanent improvements, of which the want had long been admitted. During the five years 1882-87, the financial history of Bengal was altogether different. The contract of 1877 was succeeded by a settlement, which left little scope for the development of the Provincial revenues, and which speedily necessitated a serious contraction in the scale of Provincial expenditure. Trade at last succumbed to the influences which had produced universal stagnation in the commercial world of Europe and America, and its languishing vitality was promptly reflected in many branches of the public exchequer. A scanty and uneven rainfall in three years in succession swallowed up the profits of five years of plenty, and although actual distress was nowhere so acute as to call for the intervention of the State, except on a small and partial scale, in many districts the resources of the poorer classes were wholly exhausted, and no margin whatever left for expenditure on luxuries. It was often difficult to provide adequately for the ordinary requirements of the public service, and it was necessary rather to seek for opportunities of effecting economies than of introducing administrative reforms. The chief measures of Sir Rivers Thompson's Government of Bengal were of the class to which large financial resources are not indispensable. The Bengal Tenancy Act, the prosecution of the Kidderpore Docks for which the capital was found by the Government of India, the grant of an elective constitution to Municipal Boards, the inauguration of self-government in the interior, the introduction of competitive examinations for appointment to the Subordinate Civil Service, the appointment of the Commission for the revision of ministerial salaries, and the re-arrangement of work and authority in district and divisional offices—all these are measures whose importance is mainly economic and political and which leave little trace on the financial history of the time. Nevertheless funds were provided for certain reforms and improvements which the progress of the province had rendered more than ordinarily pressing. The establishment of an Agricultural Department supplied a want to which in other provinces a much higher degree of priority had been attached, and which the revision of the law of landlord and tenant in Bengal had forced into immediate prominence. The increase to the salaries of the Subordinate Executive and Judicial Services improved the prospects of a deserving body of public servants. The appointment of additional judicial officers supplied the means of a swifter, and therefore of a better, administration of justice. The progressive additions to

the grant for primary education kept pace with the downward filtration among the masses of the desire for mental improvement. The Calcutta Exhibition of 1883-84 was instrumental in spreading a wider knowledge of the raw products of India among the manufacturers of Europe, and in acquainting the native population of this country with the capabilities of European machinery. In taking over and carrying on the Iron-works at Barrakur, the Lieutenant-Governor kept alive the embers of an industry which cannot fail to have a great future before it, when the mineral wealth of Chota Nagpur and Central India shall have been adequately exploited. The Orissa Coast Canal was a work of supreme importance for the security of the province of Orissa, and its speedy completion forms the only safeguard against a repetition of the calamity of 1865-66.

Contract of 1887-92.

61. The following comparative statements show the results under receipts and expenditure according to the contract assignment with the Governmet of India for the five years 1887-92 compared with the actuals of the subsequent years:—

62. The contract of 1887 between the Government of India and the Government of Bengal was based on arrangements made by the Finance Committee. No material advance in the system of decentralisation was made, but by a redistribution of the shares of the Imperial and Provincial Governments in the three principal heads of Land Revenue, Stamps and Excise, and by certain reductions in expenditure which were considered feasble, a general standard of normal revenue and expenditure was obtained, which was adopted as the "Ruling account." The surplus of this accounnt,

amounting to Rs. 6.89,000, was appropriated by the Government of India through the Land Revenue head, leaving the province with a Revenue and Expenditure exactly equal. Under this arrangement the Government of Bengal was admitted to a quarter share in the land revenue collections, except those from Government estates, whilst under Stamps and Excise its share was changed from one-half to three-fourths and one-fourth respectively. The proportion of charges under Stamps and Excise followed the proportion of receipts. The cost of surveys and settlements and the maintenance of agricultural works and embankments was made entirely Provincial. Refunds and drawbacks followed the proportions assigned for the revenues. The Patna-Gaya State Railway was made Imperial, and the Eastern Bengal State Railway System Provincial, with this reservation that any excess over 30 lakhs in the net revenue from the Eastern Bengal State Railway proper would be credited to Imperial revenues, and that any deficiency below 20 lakhs would be made good by Imperial to Provincial. The interest on funds provided for outlay on State Railways and Irrigation Major Works was borne by the Provincial revenues and calculated on the entire capital outlay, including loss by exchange, from the commencement of operations, but excluding the amount advanced from Provincial revenues during the term of the contract.

The only important change made since the contract was finally settled was the transfer of the management of the Tirhoot State Railway to the Bengal and North-Western Railway Company from 1st July 1890. This change did not, however, materially affect the resources of the Provincial Government, although its accounts were swollen by the inclusion of the receipts and working expenses of the Railway, and the payment of the Company's share of the net receipts from the entire undertaking.

63. The first year of the contract, 1887-88, was a period of comparative prosperity. The receipts under the principal heads of revenue were highly favourable. Railways showed a great advance above the contract estimate, and at the same time there was a large reduction of expenditure in the Civil Department. To a considerable extent this reduction was fictitious, as the savings under the head of Education were adjusted by corresponding grants made to District Boards. But these adjustments were not completed within the year, and while the accounts closed with a small increase of expenditure over the contract assignment of only Rs. 3,90,189, the increase in receipts was Rs. 17,00,256. The net surplus of the year was Rs. 13,10,067 and the closing cash balance Rs. 33,08,991.

64. The year 1888-89 opened accordingly under favourable conditions. But the harvest generally was a poor one, and the elasticity of the revenues which had been marked under several years of prosperity suffered a severe check. For the first time for many years the stamp revenue receded. But the income from railways continued to show a satisfactory increase. It was from this cause mainly that the total receipts of the year were about 6¼ lakhs of rupees more than they were in 1887-88. The expenditure side showed, however, an increase of nearly 26 lakhs. This was largely due to the increased grant for civil works of about 11 lakhs. This grant was made when it was known that the credit opening balance of the year was more than 33 lakhs, and financial prospects in other directions were generally good. The additional grant was urgently required and was very profitably expended. There was an unavoidable increase in expenditure under Railways, under Contributions to District Boards, and an augmented outlay under most heads of general administration. The net financial results of the year were, however, less unsatisfactory than was at one time anticipated. The accounts closed with an increase of expenditure over the contract assignment of Rs. 29,88,922, and an increase in the receipts of Rs. 23,31,003. The net deficit was Rs. 6,57,919, and the closing cash balance was reduced to Rs. 26,51,072.

65. The receipts of the year 1889-90 were generally satisfactory. The principal heads of revenue showed a large increase, of which, however, about 2¼ lakhs were due to special assignments from the Government of India to the Local Government for special works, principally the Orissa Coast and Hijili Tidal Canals which, under the rules in force, are shown under the head of Land Revenue, and a grant of Rs. 1,91,423 was made under the same head for a new pilot brig. A grant of two lakhs was also made to the Provincial Government with effect from that year on account of the cost of the Metropolitan

Police. Stamps, Provincial rates, Assessed taxes, Forests and Registration all showed an increase. The item of Land Revenue proper was augmented by the payment of large arrears of revenue due from the Burdwan Raj estate for the preceding year. The receipts from Railways increased by nearly eight lakhs of rupees. On the other hand, there was a falling off in Excise, and the prospects of the year, which would otherwise have been very favourable, were clouded by bad harvests and distress in Bihar and Orissa. The increase in expenditure under ordinary heads was not more than must be expected under a progressive administration. A larger outlay was necessary to ensure a larger revenue. The increase under Police was principally due to the conversion of the entire cost of the Calcutta and Suburban Police as a Provincial charge with effect from the 1st April 1889, and under Marine to the purchase of the steamer *Guide*. The outlay on Famine Relief was of a special nature. The expenditure on Civil Works was curtailed. The accounts closed with an increase of expenditure over the contract assignment of Rs. 39,62,030, and an increase in the receipts of Rs. 49,87,505. The net surplus of the year was Rs. 10,25,475, and the closing cash balance amounted to Rs. 36,76,547.

66. The financial position of the year 1890-91 was primarily affected by the payment of ten lakhs of rupees, which was transferred under the orders of the Government of India from Provincial to Imperial revenues. This payment was adjusted under the head of Land Revenue. The large increase under Railways was principally due to the inclusion of the gross receipts of the Bengal and North Western Railway for the last nine months of the year. There was a corresponding increase on the expenditure side, and the net surplus was discounted by a credit for 10½ lakhs taken by the Government of India under the head of Land Revenue on account of the estimated net earnings of the Company for the nine months, from July 1890 to March 1891, which were not paid during the year. A credit for Rs. 3,17,000 was taken under Civil Works, being the estimated value of a portion of land in the Custom House premises made over to the East Indian Railway Company for the extension of their office building. The ordinary heads of revenue showed but little expansion, while the expenditure, on the contrary, showed a tendency to increase under almost all heads. There was a large increase under Land Revenue on account of Surveys and Settlement; under Law and Justice on account of the increase in Civil Courts; under Railways as already explained; and also under Irrigation and Civil Public Works. A special grant of four lakhs was made from Provincial Revenues to the Public Works Department to undertake urgent works, and especially to defray the cost of repairs and maintenance of the roads in the Darjeeling district, which had been much damaged by heavy rains, and to construct new feeder roads to the Railway in Chota Nagpur.

67. For the year 1891-92, the last year of the contract, the total revenue under all heads of account amounted to Rs. 5,78,01,983, which was Rs. 1,13,54,983 in excess of the figures in the contract assignment. But at the same time the expenditure had increased in a still larger proportion, and amounted to Rs. 5,79,21,326 or Rs. 1,14,74,326 in excess of the assignment.

68. The following table shows the receipts under the principal heads of revenue according to the contract assignment, and the receipts under the same heads for 1891-92:—

	Contract assignment. Rs.	Actuals, 1891-92. Rs.	Increase. Rs
Land Revenue (proper) ..	98,53,000	1,00,21,000	1,68,000
Ditto adjustment ...	(—)6,89,000	+13,81,000	20,70,000
Salt	1,00,000	1,11,000	11,000
Stamps	1,00,87,000	1,13,25,000	12,38,000
Excise	24,82,000	27,83,000	3,01,000
Provincial rates (proper) ..	39,20,000	41,60,000	2,40,000
Ditto (recoveries of cess collection charges from District Boards) ...	.....	3,65,000	3,65,000
Customs	57,000	57,000	Nil.
Assessed Taxes ...	17,84,000	21,54,000	3,70,000
Forests	3,50,000	3,95,000	45,000
Registration ...	5,38,000	6,67,000	1,29,000
Total ...	2,84,82,000	3,34,19,000	49,37,000

69. The large increase under Land Revenue was due to special assignments from Imperial to Provincial Funds, which are adjusted under this head. The other increases arose from the natural expansiveness of the revenues, especially under the head of Stamps and Assessed Taxes. The increase under Provincial Rates was principally due to a change in procedure under which the cost of collecting the Road and Public Works cesses is adjusted under Provincial Rates, the share debitable to district funds being shown as receipts under the same head. After eliminating adjustments and transfers of account, the real increase credited to the Provincial revenues under principal heads during the last year of the contract came to Rs. 25,02,000.

70. Under Railways there was an extraordinary increase during the same period of from Rs. 1,00,19,000 to Rs. 1,60,40,000, or nearly 60¼ lakhs of rupees, of which nearly half was nominal and due to the inclusion of the receipts of the Bengal North-Western Railway, while the remainder was a real Provincial asset derived from the successful administration of the Eastern Bengal Railway System.

71. A comparative statement of the expenditure under Revenue heads is also shown in detail—

	Contract assignment.	Actuals, 1891-92.
	Rs.	Rs.
Refunds and drawbacks	1,55,000	1,54,000
Assignments and compensation ...	1,68,000	1,66,000
Land Revenue	34,08,000	41,14,000
Salt	11,000	52,000
Stamps	3,75,000	3,39,000
Excise	96,000	1,66,000
Provincial rates	......	4,34,000
Customs	4,97,000	5,19,000
Assessed taxes	85,000	90,000
Forests	2,25,000	2,10,000
Registration	2,95,000	3,42,000
Total ...	53,15,000	65,86,000

72. The increase in round numbers amounted to 12¾ lakhs of rupees. The increase under Land Revenue was principally due to surveys and settlements. The increase of expenditure under Excise was the necessary accompaniment of the important changes which were made in the administration of this Department. The new charge shown under Provincial Rates is a matter of account only, and represents the cost of collecting the cesses in the districts to which the Local Self-Government Act has been extended. The other returns do not seem to call for explanation.

73. The items which compose the major head of Salaries and Expenses of the Civil Department may be compared as follows:—

	Contract assignment.	Actuals. 1891-92.
	Rs.	Rs.
General Administration	15,62,000	16,16,000
Judicial Courts	80,11,000	84,83,000
Jails	17,28,000	20,22,000
Police	47,48,000	59,62,000
Marine	7,81,000	9,42,000
Education	32,46,000	25,52,000
Medical	14,59,000	15,67,000
Political	. ...	34,000
Scientific and other Minor Departments ...	3,30,000	3,13,000
Total ...	2,18,65,000	2,34,91,000

74. Under some of these heads the increase in expenditure was very large. The increase of nearly 4¾ lakhs under Judicial Courts represents the financial effect of the increase which was found necessary in the number of Subordinate Judges and Munsifs and judicial establishments generally. The increase under Jails was on account of the large outlay on machinery and manufactures, and was in a measure

counterbalanced by a corresponding increase in receipts. The increase in the cost of Police amounts to nearly 12 lakhs of rupees. This was partly due to the cost of the Metropolitan Police, which was provincialised, partly to the large expenditure incurred in connection with subjugation of the South-Lushai country and the formation of the South Lushai Hill District, and partly to the improvements effected in the Police Department in consequence of the recommendations made by the Police Commission. The reduction under Education is fictitious only. A great portion of the expenditure under this head has ceased to be departmental, but is incurred by District Boards to which an equivalent grant is made for the purpose under the head of Contributions. A portion of the increase under the head of Medical was due to the establishment of a Sanitary Board.

75. Miscellaneous expenditure increased from Rs. 26,61,000 to Rs. 32,31,000. There was, however, a decrease under Miscellaneous (proper), and the real increase under this heading was due to Superannuation or pensionary charges, which rose from Rs. 12,54,000 to Rs. 16,00,000, and also to increased charges under Stationery and Printing, mainly on account of the census operations.

76. The expenditure on Railways increased from Rs. 87,63,000 to Rs. 1,42,64,000; of this amount the major portion was due to the inclusion of the working expenses of the Bengal and North-Western Railway and the Company's share of net receipts.

77. Irrigation expenditure increased from Rs. 45,69,000 to Rs. 53,32,000. The Interest charge rose from Rs. 22,94,000 to Rs. 24,03,000, and the remainder was due to expenditure on works. A large share of the expenditure on the Orissa Coast and Hidgilee Tidal Canals was contributed by the Government of India and credited under the head of Land Revenue.

78. The increase in expenditure on Civil Works from Rs. 31,14,000 provided in the contract to Rs. 40,25,000 in 1891-92 was unavoidable with reference to the necessities of so large a province.

79. The increase under Contributions from Rs. 1,59,000 to Rs. 8,79,000 was due to the development of Local Self-Government and the assignments it was necessary to make to local bodies in order to maintain an equilibrium between their receipts and the expenditure imposed on them.

H. H. RISLEY,

Secretary to the Government of Bengal.

The 1*st April* 1893.

RETIREMENT OF LIEUTENANT PETLEY, R.N., FROM THE APPOINTMENT OF PORT OFFICER, CALCUTTA.

No. 834 Marine.

GOVERNMENT OF BENGAL—MARINE DEPARTMENT.

Dated Calcutta, the 4th April 1893.

RESOLUTION.

READ—

Letter No. 132 of 30th January 1893, from the Government of India, Marine Department.

Letter No. 1175 of 1st April 1893, from Captain B. P. Creagh, R.I.M., reporting taking over charge of the appointment of Port Officer, Calcutta, from Lieutenant E. Petley, R.N., on the forenoon of the 1st of April 1893.

THE Lieutenant-Governor desires to record his appreciation of the valuable services rendered to this Government by Lieutenant E. Petley, R.N., during the five years during which he has held the appointment of Port Officer, Calcutta.

During Lieutenant Petley's tenure of office, he has, with the approval of Government, effected changes which have proved to be of much advantage to the junior officers of the Hooghly Pilot Service, of which he has been a respected and efficient administrator. Further, Lieutenant Petley's excellent relations with the commanders of merchant vessels frequenting the port, has enabled him to give the Lieutenant-Governor much useful information on difficult Marine questions. Sir Charles Elliott is glad that the Port of Calcutta will continue to benefit by Lieutenant Petley's knowledge and experience, as he retains the appointment of Deputy Conservator under the Port Commissioners.

By order of the Lieutenant-Governor of Bengal,

C. W. ODLING,

Secretary to the Govt. of Bengal.

DISTRICT ROAD FUND.

No. 2115R.C.

GOVERNMENT OF BENGAL—PUBLIC WORKS DEPARTMENT.

Road Cess.

Dated Calcutta, the 4th April 1893.

RESOLUTION.

READ—

Letter from the Accountant-General, Bengal, No. 934L.F., dated 24th March 1893, submitting an abstract of receipts and expenditure of the several District Road Committees in Bengal for the quarter ending 31st December 1892.

RESOLUTION.—The Lieutenant-Governor directs that the accounts of the receipts and expenditure of the several District Road Committees in Bengal for the third quarter of the year 1892-93 be published in the *Calcutta Gazette* and circulated to the officers concerned.

ORDER.—Ordered that a copy of this Resolution, together with a copy of the abstract of receipts and expenditure, be published in the Supplement to the *Calcutta Gazette.*

Ordered also, that a copy of this Resolution and of the abstract referred to, be forwarded to the Commissioners of the Rajshahi, Bhágalpur, Chittagong and Chota Nagpur Divisions; to the Superintending Engineers of the Northern and Western Circles; to the Inspector of Works, Eastern Circle; and to the Financial Department of this Government, for information.

By order of the Lieutenant-Governor of Bengal,

F. J. JOHNSTONE,

Secretary to the Govt. of Bengal.

Division	No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR.				
Bhagalpur Divn.	27	Monghyr April 1, '93 Begusarai ... Jamui ...	Nil Nil Nil	Weather—getting warm. Notwithstanding the damage caused by the late rain, the prospects of the *rabi* and opium crops are fair. Indigo is doing well. No cattle-disease reported this week. Plenty of fodder and water. Prices of common rice:— Srs. Sadar ... ... 13 to 15 } per rupee. Begusarai ... ... 15 } Jamui ... ... 14 }
	28	Bhagalpur " 1, '93 Banka ... Madhipura ... Supaul ...	Nil Nil Nil Nil	Weather—still fairly cool. Standing crops doing well. Outturn of wheat will be at least 12 annas. Price of common rice 15 seers 2 chitaks per rupee.
	29	Purnea " 1, '93 Kishanganj ... Araria ...	Nil Nil Nil	Weather—getting hot. Tobacco harvest finished; outturn good. *Rabi* harvest in progress with good results. Sowings of *bhadoi* and *aghani* beginning. Moisture good. Fodder and water sufficient. Prices stationary.
	30	Malda " 1, '93 Chanchal ... Shibganj ... Gajole ...	Nil Nil Nil Nil	Weather—days getting hot, but nights still fairly cool. Harvesting of *rabi* crops progressing; outturn generally good. *Boro* paddy is now being irrigated. Ploughing for *bhadoi* crops going on. Common rice sells at from 13 to 16 seers per rupee. Cattle-pox reported from Shibganj thana.
	31	Sonthal Parganas " 1, 93 Deoghur ... Godda ... Jamtara ... Pakur ... Rajmahal ...	Nil Nil Nil Nil Nil Nil	Weather—growing hot; winds generally westerly but variable; cool at night. Prospects of *mahua* and mango rather better. Wheat in Pakur expected to be 8 annas. Rice varies in price from 11 to 14 seers per rupee: rather dearer than at this time last year. Fodder and water sufficient.
Patna Division.	32	Patna " 1, '93	Nil	Weather—warm with cool mornings. *Rabi* crops being reaped. Opium gathering finished; weighment to commence next week; outturn expected to be satisfactory. Fields being prepared for sugarcane and millet sowings. Common rice selling at 16 seers per rupee at Sadar.
	33	Gaya " 1, 93 Nawada ... Jahanabad ...	Nil Nil Nil	Weather—clear with west wind. *Rabi* harvest well advanced. Opium collections completed. *Cheena* millet being sown in places. Prices stationary. Water and fodder-supply sufficient.
	34	Shahabad " 1, '93		The hot weather has begun with its usual characteristics. The *rabi* harvest proceeds, and the weather is all that can be desired for it. Fodder and water abundant. Prices still high and show no downward tendency.
	35	Darbhanga " 1, '93	Nil	Weather—getting warm. *Rabi* harvest in progress. Paddy and *mung* being sown. Indigo sowings finished. Collection of opium nearly over. Prices stationary. Fodder and water for cattle sufficient.
	36	Muzaffarpur " 1, '93 Sitamarhi ...	Nil Nil	Weather—much warmer; wind variable. Harvesting of *rabi* crops continues; outturn fair. No cattle-disease. Fodder and water sufficient.

No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR—*concld.*			
Patna Division—concld.			
37	Saran April, 1, '93 Siwan .. Gopalganj ..	Nil Nil Nil	Weather—nights not quite so cool, but days and nights still cooler than usual; alternate east and west winds. *Rabi* being harvested still. Indigo coming up. Water and fodder abundant. Prices tend to fall. Prices of common rice:— Srs. c. Chapra ... ... 14 4 } Siwan ... ... 13 2 } per rupee. Gopalganj ... ... 13 9 }
38	Champaran „ 1, '93	Nil	Weather—days getting warm, nights cool. *Rabi* harvest in progress. *Cheena*, &c., being sown. Indigo germinating. Opium collection nearly finished. Weighments will shortly commence. No marked change in prices. No cattle-disease. Water and fodder sufficient.
ORISSA.			
Orissa Divn.			
39	Cuttack „ 1, '93	0·07	Weather—warm. Supply of fodder and water sufficient. Prices of common rice:— Srs. c. Srs. c. Sadar ... ... 10 8 to 14 7 } Kendrapara ... ... 15 0 to 21 0 } Jajpur ... ... 15 12 to 18 6 } per rupee. Banki ... ... 17 0 }
40	Puri March 30, '93 Khurda ... Banpur ...	0·38 0·70 0·12	Unusual amount of rain for this season. Lands are being ploughed for the next *sarad* crop. *Dalua* paddy is ripening and is being harvested in places. Miscellaneous crops good. Rice sells at from 14 seers 7 chitaks to 17 seers 8 chitaks per rupee.
41	Balasore April 1, '93	Nil	Weather—much warmer. Ploughing continues. Fodder and water quite sufficient. No change in prices.
CHOTA NAGPUR.			
South-West Frontier Agency.			
Chota Nagpur Divn.			
42	Hazaribagh April, 1, '93 Giridi ...	Nil Nil	Weather—seasonable; warm with west winds. Harvesting of *rabi* crops nearly finished; outturn from 8 to 12 annas. Weighments of opium about to commence; yield expected to come up to estimates. Prospects of mango and *mohua* fairly good. Water and fodder sufficient.
43	Lohardaga „ 1, '93	Nil	Weather—getting hot. Ploughing continues. Harvesting of *rabi* commenced. Common rice selling at 13 seers per rupee. Fodder and water plentiful.
44	Palamau March 31, '93	Nil	Weather—seasonable. *Rabi* harvest continues. Insect pests are reported to have attacked the *rabi* in some parts. Wheat has been somewhat damaged by the rain and will not yield as much as was expected. *Mahua* crop is coming on well. A good deal of foot-and-mouth disease reported amongst the cattle. Rice selling at 13½ to 18½ seers per rupee.
45	Singhbhum April 1, '93	Nil	Weather—getting hot. *Rabi* indifferent in Kolhan and Chakradharpur, but good elsewhere. Common rice selling at from 12 to 16 seers per rupee. No cattle-disease reported. Water and fodder plentiful.
46	Manbhum „ 1, '93 Gobindpur ...	Nil Nil	Weather—still fairly cool in the morning. The *mahua* crop will, it is thought, be a better one than was anticipated. Mango is a very indifferent crop. *Rabi* outturn estimated at 10 annas. Fodder and water-supply sufficient.

Published for general information.

* Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period

The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 01

rainfall the normal mean are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station

district, etc., from total rainfall at the subdivisional stations in the district sending in returns divided by the number of stations. A rainy day is one of

for the week ending Saturday, the 1st of April 1893.

					DISTRICT OBSERVATIONS.										
					Of week.				Rainfall.						
									Since 1st of month.			Since 1st April 1893.*

for the last ten years. The variations are *negative* when the mean for the week is less than the corresponding normal mean, and *positive* when greater. The numbers denoting cloud amount represents the part of the sky covered the whole sky being denoted by 10. Under the head District observations of for the period in question during the past ten years. The means of the district are the numerical average of the rainfall returned received in the which at least a tenth of an inch fell.

Statement of Rainfall in Bengal for the week ending Saturday (8 a.m.), the 1st of April 1893.

Meteorological Division.	District.	Station.	RAINFALL. Sunday, 26th March.	Monday, 27th March.	Tuesday, 28th March.	Wednesday, 29th March.	Thursday, 30th March.	Friday, 31st March.	Saturday, 1st.	Total number of rainy days.	Rainfall of week.	Average rainfall of week.	Total rainfall since 1st of month.	Average total rainfall from 1st of month.	Total rainfall since 1st April 1893.	Average rainfall from 1st April to date.

Explanation.—... indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the 4th April* 1893.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 1st OF APRIL 1893.

At the close of the previous week fine settled weather with an entire absence of rainfall obtained over the whole province; the distribution of pressure was also fairly normal for the hot season, though winds were more strongly westerly than usual, while temperature was still decidedly below the normal for the period. Practically also throughout the present week ordinary and fairly settled hot weather conditions have obtained, and the meteorological changes generally have been of comparatively little importance except that the unusual defect in the temperature, which has been so prominent a feature for a considerable period, has been slowly but fairly steadily decreasing in amount. On the 26th of March a moderately rapid but fairly equal fall of pressure had taken place over the whole province, and the distribution of pressure became nearly normal for the day. On the 27th pressure was almost unaltered, but temperature had risen by about one or two degrees, while winds were becoming more southerly, and generally south-westerly winds were reported. On the 28th a further moderate fall of pressure had occurred, and slight defects from the normal were generally reported, while temperature had again risen by about 2° and winds were still south-westerly except in the north and north-east of the province, where a large number of stations reported north-easterly winds There was hence a small amount of interaction in the north and east of the province between these two opposing wind systems, and this resulted in the formation of a few local storms with rain over these areas, and thus on the morning of both the 28th and 29th of March a few rain showers were reported from some of the districts in East Bengal and in those of North Bengal near the hills These falls were generally not heavy, but amounts of half an inch and upwards were reported from Buxa, Noakhali, Ramganj, Munshiganj, Chandpur, Nasirnagar, and Daudkandi. The rapid fall of pressure on the 28th appears to have been connected with the advance of a feeble barometric depression from North-West India over Bengal, but on the 29th a rapid increase of pressure took place, the increase equalling from 0·05″ to 0·10″ at the western and central stations, and the depression entirely filled up, though it still left a slight tendency to a wind circulation over parts of East and South-East Bengal. A dry westerly and north-westerly wind had, however, set in over the greater part of the province, and from this day again fine settled weather set in. In connection with the advance of this feeble depression on the 28th and 29th, temperature changed rather considerably, and the mean temperature over South-East and parts of Central Bengal became in excess of the normal, while a moderate fall of temperature was taking place at the western stations, and the mean temperature became in defect of the normal by more than 5° over the western half of the province. On the 30th the increase of pressure continued at some of the northern stations, while a fall had set in over the remainder of the province, and the effects of the depression having passed away, the mean temperature became in defect of the normal over practically the whole province. On the 31st pressure was falling at the western and south-western stations and an increase was reported elsewhere, and the whole province showed a pressure in excess of the normal by amounts ranging up to a tenth of an inch in North-East Bengal, while temperature remained from about 2° to 6° below the normal. Finally on the 1st of April a moderate increase of pressure had taken place over the whole province, and an excess above the normal of about 0·03″ to 0·06″ was recorded, but a slight comparative defect was registered at Saugor Island and Calcutta. Temperature had also risen very rapidly, and the defect of the mean temperature over the province had been reduced to about 2°. Winds were a little abnormal and showed a slight tendency to circulate round the north-west angle of the Bay in connection with the low pressure, and generally over the north of the province winds were rather strongly easterly. For the greater part of the week, therefore, weather has been fine and settled, though conditions were very slightly abnormal in South Bengal at its close.

Pressure.—The mean pressure for the week has been in excess of the normal in all districts. The usual excess has equalled from 0·03″ to 0·05,″ but the variations at neighbouring stations have been a little irregular.

Temperature.—The mean temperature for the week for the whole province has again been in defect of the normal by 4°. The smallest defects, equal to about 2°, have been recorded in Orissa and East Bengal while, on the other hand, in Bihar and Chota Nagpur defects of about 5° to 6° have been registered: The mean temperature of the week under review, though still in defect of the normal, is about 3° higher than the mean temperature of the previous week. Notwithstanding also this considerable defect, there has been a steady increase of pressure almost throughout the week, and thus while on the first day of the week the mean temperature was from 7° to 9° in defect, on the last day the defect was only equal to about 2°.

The distribution of temperature for the week and its variation from the normal value are best seen in the table below, where the average maximum, minimum and mean temperatures for the week at nine typical stations in different districts of the province are compared with the normal values for the period. It will be seen that both day and night temperatures have been considerably in defect of the normal.

Table showing the excess or defect of the actual mean temperature from the normal for the week ending 1*st April* 1893.

	Normal mean maximum temperature for the week ending 1st April.	Actual mean maximum temperature for the week ending 1st April 1893.	Variation of actual mean from the normal.	Normal mean minimum temperature for the week ending 1st April.	Actual mean minimum temperature for the week ending 1st April 1893.	Variation of actual mean from the normal.	Normal mean daily temperature for the week ending 1st April.	Actual mean daily temperature for the week ending 1st April 1893.	Variation of actual mean from the normal.

Rainfal.—The only districts of the province in which any rainfall of importance has been received during the week have been Darjeeling, Noakhali, Dacca, and Tippera, which have generally received from about a quarter to half an inch of rain.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 1st of April 1893:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 1st April 1893.

The extreme variation of temperature	28·8
The maximum temperature	92·8
	Miles.
The highest velocity of the wind in one hour	16
	lbs.
The highest pressure of wind on one square foot	?
	%
The mean relative humidity	69
The average relative humidity of the corresponding period for 24 years, S.-G.'s Office	66
	Inches.
The total fall of rain from 26th March to 1st April 1893	Nil
The average fall of the corresponding period for 24 years, S.-G.'s Office ...	0·11
The total fall from 1st January to 1st April 1893	6·85
The average fall of the corresponding period for 24 years, S.-G.'s Office ...	2·80

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h, 10h, 16h and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

⌓, dew; ≡, fog.

C. Little,

For Meteorological Reporter to the Govt. of India.

FINANCIAL REVIEW FOR BENGAL.

Published for general information.

PART I.

The origin of Provincial Finance, and the Budget for 1893-94.

IN laying before the Council the first Provincial Financial Review, I propose, with the permission of the President, to explain as briefly as possible how the system of Provincial Finance came to be introduced, and the main differences which distinguish it from the centralised financial system which it displaced. An attempt will then be made to compare Provincial Finance as understood in India with the cognate systems of Federal Finance as practised in the German Empire and the American Commonwealth. Finally I shall explain the most prominent and characteristic features of the Budget of the year 1893-94. In order to save the time of the Council, which has other business to transact, the full account of the working and results of the Provincial system has been included in the second part of this Review, which I do not propose to read to you now, though it will be published in the Gazette for the information of the public.

2. A high authority has stated that it was not until after the Mutiny in 1857 that anything deserving the name of systematic finance was introduced into India. The era of administrative development and opening up of the country which then set in gave rise to heavy expenditure in all directions, and a system of strict financial control became indispensable. In the first instance this control was necessarily vested in the Government of India, and was, as Sir John Strachey points out, of a severely repressive character. From the time of the Mutiny to the year 1871-72, when the system of Provincial Finance was brought into working, the Local Governments possessed no powers of financial control, and had no financial responsibility. The Supreme Government administered the minutest details of the public expenditure. Without its authority no official, however small his salary, could be employed at the cost of public funds, and even district roads and buildings and local works of improvement were hampered by the same onerous conditions.

3. The evils of applying this highly centralised system to an area so heterogeneous in respect of its physical conditions and the character of its inhabitants as the continent of India, became more and more apparent as time went on. As long ago as 1861-62 Mr. Laing laid stress in his Financial Statement on the defects of the then existing system:—

'If this great empire is ever to have the roads, the schools, the local police, and other instruments of civilisation which a flourishing country ought to possess, it is simply impossible that the Imperial Government can find either the money or the management. The mere repair of the roads, where anything like a sufficiency of good roads has been made, is a matter altogether beyond the reach of any central bureau. It is of the first importance to break through the habit of keeping everything in dependence on Calcutta, and to teach people not to look to the Government for things which they can do far better for themselves. . . .

It is most desirable to break through the system of barren uniformity and pedantic centralisation, which has tended in times past to reduce all India to dependence on the bureaus of Calcutta, and to give to Local Governments the power and the responsibility of managing their own local affairs. The great branches of the expenditure, such as the army and national debt, are imperial; and while this is the case, the great branches of revenue must remain imperial also. But there is a wide field, both of revenue and expenditure, which is properly local, which in England is met by local rates, and which, in fact, must be met locally, or not at all.'

4. At about the same time the late Sir Henry Maine wrote with reference to the same subject:—'I do not think that anybody can have observed the recent workings of our system of financial control without coming to the conclusion that, if it be not on the point of an inevitable collapse, it is at all events in great danger of going to pieces unless the strain be lightened somewhere.'

5. Nor were the evils complained of by any means confined to the purely financial branches of the administration. It was bad enough of course that insufficient funds were available for local purposes, and that the utmost uncertainty prevailed as to the amounts likely to be sanctioned for Provincial expenditure. But the worst consequences were those which took effect on the administration itself, and on the relations between the Provincial and Supreme Governments. The constant scramble for the largest share of the public revenues—a scramble in which the least scrupulous were apt to come off best—brought with it serious differences of opinion as to petty details of expenditure and led to constant interference on the part of the Supreme Government in matters of which it was necessarily very ill informed. This was resented by the Local Governments, who were in touch with the facts and knew their own wants, and in this way a state of tension and conflict was brought about which added greatly to the difficulties of Indian administration.

6. In the Resolution of the 14th December 1870, the Supreme Government reviewed the entire question. They observed that, under the existing system, the division of responsibility was ill-defined, and that this led to conflict of opinion injurious to the public service. In order to avoid these conflicts, the obligation to find the funds necessary for administrative improvements ought to rest upon the authority whose immediate duty it is to devise such measures. They went on to say that the Supreme Government was not in a position to understand fully local requirements, nor did it possess the knowledge necessary for the successful development of local resources. Each province had special wants of its own, and might have means for

supplying them which could not be properly diverted to Imperial purposes. A tax applicable to the circumstances of one part of the country might be distasteful or unsuitable elsewhere, and everywhere rates might be proper for provincial or local purposes, which could not be taken for the Imperial revenue.

7. In order to give effect to these principles, the Government of India accordingly made over to the Bengal Government for the year 1871-72 the financial control of the following services:—Jails, Registration, Police, Education, Medical Services (except Medical establishments), Printing, Roads and Miscellaneous Public Improvements, Civil Buildings, a certain proportion of Public Works establishments, and a certain proportion of tools and plant. The allotment given to meet these services amounted to Rs. 1,16,85,920 which was arrived at by adding up the actual charges of the year 1870-71, and taking this as the Provincial assignment, less a deduction of a rateable proportion of Rs. 3,50,000 which was resumed by the Imperial Government. By a subsequent Resolution of the 20th March 1871 a special allotment of Rs. 5,32,870 was made in order to enable the scheme to be inaugurated successfully. This sum was treated as the opening balance of the year 1871-72.

8. The Government of India undertook to maintain for the future the assignments for Provincial services at the amounts thus fixed, unless some fiscal misfortune, such as a heavy loss in the opium revenue, or some national disaster, such as war or severe famine, should occur; and pledged itself in any case not to reduce them without previous consultation with the Governments concerned. It was left to the discretion of the Governments to distribute the total grant among the several departments for which they had become responsible, and it was laid down that any portion of the assignment made to any province that might be unspent at the end of the year would not lapse to the Imperial revenue, but would remain at the disposal of the Local Government. It was further provided that each Local Government should publish its own yearly estimates and accounts in the local gazette, together with a financial exposition (which should, where possible, be made before the local Legislative Council) analogous to that annually made in the Legislative Council of the Governor-General.

9. The financial control thus entrusted to the Local Government was to be exercised subject to the conditions that without the previous sanction of the Government of India no appointment on more than Rs. 250 a month should be created; that no class or grade of officers should be created or abolished; and that no addition should be made to the pay or allowances of any individual or class of officers that would lead to increase in the emoluments of any public servants doing duty in the same province whose pay and allowances are charged to Imperial revenues. No public money might be invested, and no services rendered to other departments by the transferred departments were to be diminished, nor might the latter claim increased services from other departments. The rules of the Supreme Government as to leave of absentee and absentee deputation and superannuation allowances were to be observed, and returns, accounts and estimates were to be submitted to the Supreme Government in such form and at such times as might be prescribed.

10. In addition to these conditions, which were based in the main on financial considerations, the Local Government was reminded that increased powers of financial control would be accompanied by a corresponding increase of administrative responsibility, and that in respect of general principles it must follow the main lines of policy laid down by the Imperial Government. It was added that the procedure of the departments of Registration, Jails and Police was to a large extent governed by law; and that, although no law existed on the subject of education, the policy of the Government had been declared and prescribed in despatches from the Secretary of State, the authority of which and of the rules sanctioned by the Government of India regarding grants-in-aid and other matters of general principle was not affected by the policy of decentralisation.

11. In introducing this far-reaching administrative reform, the Government of India expressed the belief that it would produce greater care and economy; that it would import an element of certainty into the fiscal system which had before been absent, and that it would lead to more harmony in action and feeling between the Supreme and the Provincial Governments than had

formerly prevailed. Beyond all this there was a greater and wider object in view. It was felt that local interest, supervision and care were necessary to success in the management of funds devoted to education, sanitation, medical, charity and local public works. And it was hoped that the operation of the new scheme would afford opportunities for the development of self-government, for strengthening municipal institutions, and for the association of Natives and Europeans to a greater extent than before in the administration of affairs.

12. On looking at the system thus introduced it is impossible not to be struck by its resemblance to the systems of federal finance which prevail in the German Empire and in the American Commonwealth. In these countries the functions of the Imperial and the Local Governments are divided in much the same way as they are in India. Thus in Germany the revenues derived from Customs, the indirect taxes upon salt, tobacco, brandy, and sugar, the revenues from stamps, bills of exchange, securities and playing cards are set apart for the Imperial Budget, the expenditure side of which includes the cost of the Federal Government—the Army, Navy, Post Office, Telegraph, State Railway, Supreme Court, Imperial Bank, Pension and Invalid Funds, Currency and Debt. Any deficit which remains after the sources of revenue reserved for the Empire have been exhausted is met by contributions raised from the individual States according to their population. The actual demands under this arrangement varied in the Budget of 1892-93 from £9,405,191 levied on Prussia to £12,392 paid by the little State of Schaumburg-Lippe. In America the Federal Government raises its revenue by indirect taxation and chiefly by duties of customs and excise. Direct taxes were levied during the war, and stamp duties were also resorted to, but no stamp revenue is now collected by the National Government. The individual States on the other hand derive almost the whole of their revenue from direct taxation, as the levying of import or export duties by a State is forbidden by the Federal Constitution.

13. Close as these resemblances are, there is no reason to suppose that the Indian system was modelled or has been materially influenced by these Federal systems of finance. Provincial finance is a plant of natural growth, developed under the pressure of administrative necessity, and owing nothing to the example of other countries. It was in fact devised, if not actually introduced, before the German system, which it most closely resembles, had come into existence; and it was developed on lines which, though leading to substantially the same result, started from diametrically opposite directions. Both in Germany and America the individual States came first, and they were the sole repositories of sovereign power. The Federal system was created by the States stripping themselves of certain attributes of sovereignty and making them over to the Central Government. In India this order of things was reversed. All power resided in the group of departments forming the Government of India, and for a long time this central bureaucracy absorbed and exercised all the functions of Government and itself transacted all financial business from the negotiation of a State loan down to sanctioning of a chaukidar's pay. At length the burden became too heavy and the complication too great, and the Central Government transferred some of its powers to the Local Governments to be exercised subject to the conditions stated above. Thus they arrived by an independent process of development at substantially the same results as the German Imperial Government. The main differences are, first, that in Germany the division of taxation between the Empire and the individual States is effected by reserving all indirect taxation for the former, and leaving to the States direct taxes which the Empire does not levy, and secondly; that the contributions of the States to the Empire are regulated with reference to the population concerned. In India, on the other hand, no attempt is made to set apart certain kinds of taxation as exclusively Imperial, and the division is effected by assigning arbitrary fractional shares to the Provincial Governments. Similarly the amount of the contributions levied from time to time by the Imperial Government is not regulated by any intelligible principle, but varies like the medieval benevolences according to the necessities of the moment. The Indian system, though less precise and logical than the German, is probably a good deal more elastic, and admits of being modified at intervals of five years, or even oftener, in accordance with the requirements of Imperial Finance.

14. I now turn to the current contract, which began to take effect on the 1st April 1892. After a lengthy correspondence with the Government of India, the terms and conditions of this contract were finally settled on the 17th March 1892. It was then arranged that the revenue and expenditure shown in the schedule attached to the Government of India's letter of that date should be Provincial in certain specified proportions, and that, from the revenues thus assigned, a deduction of Rs. 14,39,000 should be made through the Land Revenue head. The Bengal Government has no means of knowing on what basis, or by what method of calculation, the sum of Rs. 14,39,000 was arrived at. On the receipt side of the account, the Provincial Government gets the whole of the following items:—Twelve per cent. on the Land Revenue collected from Government estates; rents of Salt Warehouses; fines and other minor receipts; Provincial rates; minor customs receipts; interest on local loans; receipts from Courts of Law, Jails, Police, Marine, Education, Medical, Botanic Gardens, Cinchona, Fairs, and Emigration and receipts in aid of superannuation; also Stationery and Printing, except the value of supplies to Railways and local bodies. and all receipts from Irrigation, Navigation, and Civil Works. It receives one-half of Assessed Taxes, Forest receipts, and Registration receipts, and of the traffic earnings on the Eastern Bengal Railway System; one-fourth of Excise and of minor Land Revenue heads, and three-fourths of the important head of Stamps. The revenue from these sources for 1893-94, excluding the opening balance, is estimated at Rs. 4,22,30,000.

15. On the expenditure side the Government of Bengal is required to meet all charges under the head of Land Revenue, except Survey and Settlement; all expenditure for Provincial rates, and the transferred heads of Customs and Salt and Interest; also charges arising under the heads Courts of Law, Jails, Police, Marine, Education, Medical, and, with certain exceptions, Political; the whole of Scientific and Minor Departments, except Census, Ancient Manuscripts and certain Veterinary charges; the whole of Stationery and Printing; working expenses of Irrigation and Navigation and Civil Works, with the exception of Imperial Buildings. It is also responsible for one-half of the expenditure under Assessed Taxes, Forest, and Registration, and for half of the working expenses of the Eastern Bengal Railway System; for three-fourths of Stamp expenditure and a quarter of Excise.

16. Concurrently with the settlement of this contract, the general rules regulating Provincial finance were republished with the modifications they had undergone up to date, and it was also laid down that, if any considerable charge of an exceptional nature, which ought ordinarily to be borne by one Province were paid in another Province, the question of a corresponding adjustment between the two would be specially dealt with. This latter provision was rendered necessary by the decision to stop inter-provincial adjustments. It was further arranged that, on the score of the technical character of the work and the necessary uniformity in the working of all State Railways, the Provincial Government should not exercise any administrative or financial powers in regard to the Eastern Bengal Railway; but in order to maintain the Local Government interests in the constructing feeder roads and in the general development of communition in the tract served by the Railway, half the net earnings should be Provincial; that the capital expenditure required to complete the Higili Canal should be advanced on certain terms from Imperial funds; that the expenditure on Survey and Settlement operations during the term of the contract, being in its nature liable to great variations, and difficult to reduce to a uniform yearly average, should be met by Imperial revenues; and lastly, that if the recoveries on account of the Survey and Settlement operations in Bihar should fall short of the expenditure which is recoverable from the zamindars and raiyats, the difference should be charged to Provincial revenues.

17. With reference to doubts which had arisen concerning the interpretation of former contracts, the Government of India took the opportunity of declaring the contract to be a consolidated one, and not a collection of separate contracts for each Provincial head. They also stated that the representations made by the Government of Bengal, regarding each separate head, had received careful consideration, and that the adjusting figure of Rs. 14,39,000 had been fixed, so as to place the revenue and expenditure in equilibrium on the basis

generally of the existing stage of growth. The Local Government, it was said, would be expected to maintain all the Provincial services in a state of administrative efficiency, providing any increased expenditure necessary for that purpose either by reductions of expenditure or from increased revenue. It was added that the Bengal Government would not be entitled to assistance from Imperial revenues to meet future increases of expenditure or decreases of revenue, of whatever nature, classified under Provincial heads.

18. I pass on to notice in somewhat fuller detail those heads of the Budget for 1893-94 which seem to stand in need of comment or explanation.

RECEIPTS.

19. *Land Revenue.*—The Government of India have accepted the estimate of total collections under this head, as passed by the Local Government for 1893-94, amounting to Rs. 3,84,33,000. The estimate provides Rs. 5,07,000 for "12 per cent. on collections from Government estates." Including this amount, the Provincial share of land revenue comes to one-fourth of (Rs. 3,84,33,000—5,07,000) + 5,07,000=Rs. 99,88,000.

The debit of Rs. 13,50,000 to Provincial shown under Land Revenue adjustment is made up as follows:—

	Rs.	Rs.
For fixed contribution to Imperial revenues ...	......	14,39,000
For interest on the capital advanced from Imperial revenues for remodelling the Hidgelee Tidal Canal	......	21,000
Total deduction ...	......	14,60,000
Add—		
For capital outlay on Hidgelee Tidal Canal ...	1,00,000	
For Imperial buildings transferred to District Boards	10,000	1,10,000
Net deduction ...	......	13,50,000

It may be here mentioned that for reasons of account all transfers as between Imperial and Provincial revenues are effected through the head of Land Revenue under the sub-head of adjustments.

20. *Stamps.*—The estimate of total revenue from stamps for 1893-94 amounts to Rs. 1,57,00,000. The growth of this most important and expansive branch of Provincial revenue during the past four years has been as follows:—

	Rs.	Increase. Rs.
1887-88	1,38,16,000	......
1888-89	1,38,39,000	23,000
1889-90	1,42,38,000	3,99,000
1890-91	1,42,47,000	9,000
1891-92	1,51,00,000	8,53,000
Total ...	.....	12,84,000

The increase amounts to Rs. 12,84,000, or an average of more than three lakhs a year. The smallness of the increase in 1890-91 was due to the reduction in the rate of copying fees from 4 annas to 3 annas per folio, with effect from 1st April 1890. The revised estimate for 1892-93 amounts to Rs. 1,55,50,000, and the estimate for 1893 94 has been placed at Rs. 1,57,00,000. As the stamp duty is fixed by substantive law at rates which cannot be altered, the revenue under

this head cannot be materially affected by administrative measures. All that can be done is to watch the working of the law carefully, to look out for evasions, and to see that adequate penalties are levied for breaches of the law and rules.

21. *Excise.*—The Accountant-General estimated the total revenue for the year 1893-94 at Rs. 1,12,00,000, against Rs. 1,10,64,413 estimated by the Board of Revenue. In Government order No. 654T.-F., dated the 24th October 1892, sanction was given to the enhancement of duty on wholesale licenses for the vend of imported liquor in the town of Calcutta from the nominal sum of Rs. 50 a year to Rs. 50 a month, or Rs. 600 a year, from 1st April 1893. Some changes have also been made in the duties on retail licenses. The effect of these orders will be to increase the revenue to a considerable extent. A substantial increase is also anticipated next year under the head "Farm of drugs," owing to the present rates of duty on all kinds of ganja being raised by one rupee per seer with effect from 1st April 1893, under the orders of the Government of India, in the Finance and Commerce Department, No. 784, dated the 23rd February 1891. It was calculated that the total increase on this and other accounts would not be less than three lakhs, and accordingly the Accountant-General's estimate was raised from Rs. 1,12,00,000 to Rs. 1,15,00,000, and this has been accepted by the Government of India.

22. *Provincial Rates.*—The head *Provincial Rates* represents principally the proceeds of the Public Works Cess, but it includes also the recoveries from District Funds of the proportionate cost of collecting Road Cess and the Rates for the general management of Wards' and Attached Estates. The receipts have been as follows:—

	1887-88.	1868-89.	1889-90.	1890-91.	1891-92.	Revised estimate, 1892-93.	Estimate, 1893-94.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
(*a*) Public works cess	38,19,860	37,97,870	39,11,693	38,93,461	40,79,753		41,50,000
(*b*) Proportionate cost of collecting road cess.	3,13,524	2,68,084	3,12,096	3,55,052	3,64,355		3,31,000
(*c*) General management of wards' and attached estates.	1,03,154	90,369	82,235	71,420	80,419		80,000
Total ...	42,36,538	41,56,323	43,06,024	43,19,933	45,24,527	45,40,000	45,61,000

The variations under (*a*) were due to progress in valuation and revaluation of districts. The gross rental assessed on the introduction of the road cess was Rs. 13,11,68,432, and on the same basis the statistics furnished by the Board of Revenue show that it amounted to Rs. 14,60,45,236 in 1890-91, and Rs. 14,78,83,221 in 1891-92. Large recoveries of the arrears of rate on wards' estates were effected from the Burdwan Raj in 1887-88, and this accounts for the larger receipts under (*c*) in the first year of the contract. The comparatively smaller receipts under (*c*) in 1890-91 and 1891-92 were due to the release from Government management of a large number of estates during the course of the former year.

Head (*b*) is a new head of account which appeared in the Provincial Account in consequence of the introduction of the Local Self-Government Act. Prior to the extension of the Act, the charges for the collection of both the Road and Public Works Cesses were shown in the District Road accounts, the cost of collecting the Public Works Cess being paid to the District Road Committees through the adjusting head of Contribution, an assignment of Rs. 47,000 being made in the Provincial Contract under that head. The arrangement has now been reversed. The collection of the cess in the districts, where the Local Self-Government Act has been introduced is shown as a Provincial charge, and is recovered from the District Funds before the net collections of the Road Cess are made over to the District Boards.

23. *Assessed Taxes.*—The Accountant-General placed the estimates of total receipts for 1893-94 at Rs. 43,50,000. Looking to the steady growth of revenue under this head, the estimate was raised by this Government to Rs. 44,00,000, but this has been reduced by the Government of India to Rs. 43,30,000, with reference to the actuals of 12 months ending January 1893, which amounted to Rs. 43,28,000.

24. *Forests.*—The following table shows the estimates of receipts and expenditure for the year 1893-94, compared with the actuals of 1891-92 and the sanctioned and revised estimates of 1892-93:—

Budget heads.	Actuals, 1891-92.	Sanctioned estimates, 1892-93.	Revised Estimates, 1892-93.	Budget estimates, 1893-94.
Receipts.	Rs.	Rs.	Rs.	Rs.
I.—Timber and other produce removed from the forests by Government agency ...	41,503	59,400		25,100
II.—Timber and other produce removed from the forests by consumers or purchasers ...	6,95,062	7,21,000		7,07,250
III.—Confiscated, drift and waif wood ...	8,210	17,000		12,180
IV.—Revenue from forests not managed by Government ...	......	......		......

Grand Total of Expenditure ...	4,08,519	4,81,000	4,45,000	4,81,000
Surplus ...	3,81,034	3,51,000	3,05,000	2,93,000

The estimates provide for a surplus of Rs. 2,93,000 at the end of 1893-94, against Rs. 3,05,000, the latest estimate for 1892-93.

25. *Registration.*—The Accountant-General placed the revised estimate for 1892-93 at the same figure as the original estimate for the year, which was Rs. 13,60,000. This amount was also proposed as the estimate for 1893-94. The actuals for the twelve months ending January 1893, were Rs. 14,08,000, and the revised estimate for 1892-93 has been placed at Rs. 14,10,000, and the estimate for next year at Rs. 14,20,000. Half the receipts only are Provincial.

26. *Jails.*—The total receipts for 1893-94 were estimated by the Inspector-General at Rs. 9,72,000, while the Accountant-General placed them at Rs. 9,09,000, reducing the estimate under the head Jail Manufactures by Rs. 63,000. The Lieutenant-Governor considered that the probable receipts under this head had been under-estimated by the Accountant-General, and thought they might safely be placed at Rs. 9,50,000. The total estimate of receipts was accordingly placed at Rs. 9,59,000.

27. *Police.*—The Accountant-General estimated the total receipts for 1893-94 at Rs. 2,46,000, against Rs. 4,60,000, the sanctioned estimate for 1892-93, and Rs. 4,48,634, the actuals of 1891-92. The decrease is due to the exclusion of receipts on account of village police in the Chota Nagpur Division, which have been transferred from Provincial to Local. The estimate has been further reduced by Rs. 27,000 on account of the transfer of fees for the inspection of steam-boilers from the Provincial account.

28. *Marine.*—The Accountant-General estimated the total receipts for 1893-94 at Rs. 9,28,000, against Rs. 9,68,000, the sanctioned grant for 1892-93, and Rs. 9,65,408, the actuals of 1891-92. The actual receipts, during the twelve months ending January 1893, were Rs. 9,04,000. The revised estimate for 1892-93 has accordingly been placed at Rs. 9,05,000, and the estimate for 1893-94 at Rs. 9,12,000.

29. *Education.*—The total receipts of the Education Department for 1893-94 are estimated at Rs. 5,71,000, against Rs. 6,10,000, the sanctioned estimate for

1892-93. The actuals of 1891-92 amounted to Rs. 5,95,123, and those of the twelve months ending the 30th September 1892 to Rs. 5,70,758.

30. *Medical.*—The estimate of receipts for the year 1893-94 was placed by the Accountant-General at Rs. 1,49,000, against Rs. 1,50,000, the sanctioned estimate for 1892-93. The estimate has been raised by Rs. 2,000 as some receipts are anticipated in consequence of the circular what the Sanitary Board have issued to all municipalities laying down the rate of fees to be levied from them for the preparation of plans and estimates for drainage and water-works schemes.

31. *Scientific and other Minor Departments.*—The principal items of receipts under this head are from Cinchona manufacture and Emigration fees. The total receipts are estimated at Rs. 1,62,000.

32. *Civil works by Civil Officers.*—The Provincial receipts from ferries for the year 1893-94 are estimated at Rs. 2,27,500, and the receipts from cemeteries at Rs. 2,500, against Rs. 2,23,500 and 2,500, respectively, the amounts sanctioned for 1892-93.

EXPENDITURE.

33. *Land Revenue.*—The Accountant-General's estimates for 1893-94 under all the Provincial heads and sub-heads of expenditure amount to Rs. 34,19,000, as follows:—

	Rs.
Charges of district administration	29,43,000
Management of Government estates	4,01,000
Land Records and Agriculture	75,000
Total Provincial ...	34,19,000

The estimate was raised by this Government by Rs. 4,000 in order to provide for revision of office establishment in the Deputy Commissioner's office, Sonthal Parganas. The increased provision, however, does not appear in the estimate of the Government of India.

34. *Salt.*—The Accountant-General estimated Rs. 31,000 for expenditure of the Salt Department during 1893-94, which is the ordinary normal expenditure of the Department. A provision of Rs. 10,000 has, however, been kept in reserve to meet any further improvements that may possibly be made in order to provide increased facilities for the trade at Sulkea, Chittagong, or Narainganj, and the estimate has therefore been raised to Rs. 41,000. The revised estimate for 1892-93 amounts to Rs. 1,25,000, which includes a special provision of Rs. 75,000, the amount payable to Mr. Kilby as an honorarium for his patent salt weighing machine.

35. *Stamps.*—The total expenditure for 1893-94, of the Stamp Department, is estimated at Rs. 6,14,000, against Rs. 5,68,000, the sanctioned grant for 1892-93, and Rs. 4,51,779, the actuals of 1891-92. The actuals of 1891-92 did not include the cost of plain paper for use with Court-fee Stamps, which, under the terms of the new Provincial Contract, is charged to this head with effect from 1892-93, instead of to "Stationery and Printing." The Provincial share amounts to Rs. 4,61,000.

36. *Excise.*—The chief variations in this budget are due to the reduction of the salary of Excise Commissioner from Rs. 2,900 to Rs. 1,800, as under the orders of the Secretary of State, the Excise Commissioner will now ordinarily be a Magistrate of the second grade. Larger provision has, however, been made for the construction and completion of distillery buildings, and the total grant now stands at Rs. 7,16,000, of which the Provincial share is only one quarter, or Rs. 1,79,000.

37. *Assessed taxes.*—The total expenditure of the Income-Tax Department during 1892-93 was originally estimated at Rs. 1,90,000, and this amount was reproduced by the Accountant-General as the revised estimate for the year, while he placed the estimate for 1893-94 at Rs. 1,89,000. It has

been taken by the Government at Rs. 1,93,000, of which the Provincial share is one-half. The Accountant-General's estimates for 1893-94 include a provision of Rs. 3,600 for the local allowance of Rs. 300 per month drawn by the Superintendent of Preventive Service for performing the duties of the Collector of Income-Tax, Calcutta. As Mr. Kilby, the permanent Superintendent, has retired from the service, and a whole-time Collector of Income-Tax on Rs. 700—1,000 per mensem has been appointed, a provision of Rs. 8,400 as salary, and Rs. 1,200 as house allowance, has accordingly been made under this head.

38. *Judicial Courts.*—The following table compares the estimates of expenditure for 1893-94 with the sanctioned grants for 1892-93 and the actuals of 1891-92:—

	Actuals, 1891-92.	Sanctioned estimates, 1892-93.	Estimate, 1893-94.
	Rs.	Rs.	Rs.
High Court	11,41,299	11,35,000	11,40,000
Law Officers	3,14,862	2,82,000	2,90,000
Coroner's Court	14,358	13,000	13,000
Presidency Magistrate ...	70,430	63,000	63,000
Civil and Sessions Courts ...	43,59,269	43,90,000	44,50,000
Courts of Small Causes ...	2,01,489	1,82,000	1,78,000
Criminal Courts	22,44,523	22,45,000	22,56,000
Pleadership Examination charges	7,822	8,000	8,000
Refunds	1,28,755	1,15,000	1,30,000
Total ...	84,82,807	84,33,000	85,28,000

The increased provision of nearly a lakh of rupees under Civil and Session Courts on the actuals of 1891-92 represents the financial effect of the increase which has been found necessary in the number of Subordinate Judges, and Munsifs and Judicial establishments generally. There has also been sanctioned an addition to the ministerial establishment of the Civil Courts in consequence of the recommendations made in the reports of Messrs. Toynbee and Stevens, who were appointed to enquire into the subject.

39. *Jails.*—The grants for 1893-94 for the Jail Department are as follows:—

Jails.	Sanctioned grant.
	Rs.
Superintendence	52,836
Presidency Jail	98,826
Central Jails	4,93,894
District „	5,81,958
Lock-ups	1,20,457
Reformatary Schools	35,975
	13,83,946
Add for rounding	54
Total ...	13,84,000
Jail manufactures	7,95,000
GRAND TOTAL ...	21,79,000

The total grant amounts to Rs. 21,79,000 against Rs. 20,22,000 the actuals of 1891-92 and Rs. 20,90,000 the revised estimate for 1892-93.

The increase in expenditure, which is partly counterbalanced by an increase in receipts, is necessitated by the increase of jail population, and adequate provision has to be made for the high prices of food-grains for ration expected to prevail during the year.

40. *Police.*—The total expenditure of the Police Department for 1893-94 was originally estimated at Rs. 56,80,000, from which were deducted Rs. 21,000, the charges connected with steam-boiler inspection, and Rs. 75,000 under the head of temporary transport for the South Lushai Hills. The Government of India have accepted the deduction only of the first item, so that the grant now stands at Rs. 56,59,000. The estimate under Special Police, amounting to Rs. 4,98,000, includes a lump provision of Rs. 4,46,000 for expenditure during the ensuing year under the head South Lushai Hill Force. The estimate has been accepted provisionally, subject to any modifications which Government may hereafter find it necessary to make in view of the approaching transfer of the South Lushai territory to Assam.

41. *Marine.*—The difference of Rs. 10,000 under this head between the estimate of the Government of India and that of the Local Government represents the provision made by this Government for compensation payable to Captain Petley, the Port Officer, on account of his enforced retirement, which is payable by the Provincial revenues, but which does not appear to have been included in the budget passed by the Government of India. A sum of a lakh and a half required to meet the balance of the cost of the new pilot vessel to replace the *Coleroon*, which is now being built at the Government Dockyard at Bombay, has been provided under the head of Purchase and hire of ships and vessels.

42. *Education.*—The estimate provides for a total expenditure of Rs. 25,73,000 against Rs. 25,30,000, the revised estimate for 1892-93. The increase is chiefly for grants-in-aid for primary education, and for additional staff sanctioned for the Sibpur Engineering College. This heavy expenditure includes the cost of Government Colleges which accounts for Rs. 5,20,000, Government schools Rs. 5,45,000, and grants-in-aid Rs. 5,89,000. These are institutions for general education, but special or technical education is also fairly well supported—Government Professional Colleges costing Rs. 1,21,000 and Special Government schools Rs. 1,45,000.

43. *Medical.*—The grant for the Medical Department for 1893-94 stands—

	Rs.
Medical Establishment	5,86,000
Hospitals and Dispensaries	3,83,000
Sanitation and Vaccination	1,92,000
Grants for medical purposes	3,500
Medical Schools and Colleges	2,68,000
Lunatic Asylum	1,10,000
Lock Hospitals	16,000
Chemical Examiner	26,000
Refunds	500
Total ...	15,85,000

The total grants amount to Rs. 15,85,000 against Rs. 15,67,000 the actuals of 1891-92—Rs, 15,80,000 the revised estimate for 1892-93 proposed by this Government. and Rs. 16,00,000 the revised estimate of the Government of India. The incease on the actuals of 1891-92 is due to the normal growth of the administrative charges.

The estimate of the Local Government includes an additional provision of Rs. 4,000 for remuneration to Civil Surgeon's clerks for doing vaccination work. The provision does not appear in the estimate of the Government of India. This additional duty forms a portion of a large scheme of reorganization which has been recently carried out, and which is expected to bring about a great extension of vaccination, and materially to enhance its efficiency in rural areas.

44. *Scientific and other Minor Departments.*—The following table shows the details of the grants under this head:—

	Rs.
Provincial Museums	16,140
Donation to Scientific Societies	14,000
Experimental cultivation	19,500
Cinchona Plantations	1,03,552
Public Exhibitions and Fairs	12,350
Imperial Institute	500
Veterinary charges	19,000
Botanic and other public gardens	1,10,009
Emigration	22,754
Census	1,700
Registration of Railway Traffic	2,320
Registration of River and Road-borne Traffic	18,108
Provincial statistics	2,500
Examinations	3,000
Refunds	713
Charges in connection with the Indian Factories Act ...	18,400
Total Provincial ...	3,64,546

The estimate for 1893-94 is Rs. 3,64,000 against Rs. 3,13,000 the actuals of 1891-92 and Rs. 3,25,000 the revised estimate for 1892-93. The increase is chiefly for the provision of two new items, veterinary charges (19,000) and charges of Indian Factories Act (18,400), which were not in existence in 1891-92.

45. *Stationery and Printing.*—The estimate under this head amounts to Rs. 13,05,000, but it is hoped there will be some reduction of expenditure under this head in consequence of the recent orders issued to revise each form, whenever necessary, only once in a year, and not to introduce new forms, except under special orders, till the old stock is exhausted.

46. *Civil works by Civil officers.*—The difference of Rs. 32,000 under this head between the estimate of this Government and that of the Government of India is due to the provision struck out by the Local Government for the construction of bridges in the South Lushai Hills.

47. The closing balance, as now estimated by the Government of India, is Rs. 20,72,000, *i.e.*, Rs. 72,000 in excess of the minimum balance, which the Provincial Government is required to maintain under the orders of the Government of India.

48. The foregoing paragraphs explain, in as full detail as is appropriate to the occasion, the figures of the Provincial Budget estimate of 1893-94. For the results of the system of Provincial Finance from its first introduction in 1871-72 to the close of the financial year 1891-92, a period of twenty years marked by great financial vicissitudes, I must refer the Council to the second part of this Review, which, as I have already stated, will be published in next Gazette for the information of the public. It is sufficient to say here that the Bengal of the present day owes to Provincial Finance most of the facilities and conveniences which distinguish it from the Bengal of 20 years ago: its railways, its irrigation and navigation canals, many of its most important roads, and a host of administrative improvements which it would be tedious to enumerate, amongst them the Council Chamber in which we are now assembled. The period of 20 years which we have to look back upon was one, as I have already said, of many vicissitudes and public calamities. At its opening the province had hardly recovered from the shock of one famine and was soon to suffer from another. Cyclones, floods, wars and rumours of wars, a falling exchange, grave alternations of agricultural depression and prosperity, serious changes of policy affecting the revenues of the State, all these things form a series of events beyond the control of the Provincial Government, which are liable to recur at any moment, and which constantly threaten the security of the Provincial finances.

Statement showing the Bengal Provincial Services Estimate for 1893-94 and the Revised Estimate for 1892-93.

RECEIPTS.	Revised estimate for 1892-93 as reported to the Government of India, Finance and Commerce Department, in letter No. 1344F., dated 9th March 1893. PART II.

The Working of Provincial Finance.

The contract of 1871—77.

In attempting to gauge the results of the process of decentralisation which commenced in 1871-72, and to indicate the direct and tangible benefits which Bengal has derived from it, it will be convenient to follow in the main the periods at the close of which the arrangement, of late years called a contract between the Imperial and Local Governments, has been revised. The first of these periods embraced the six years, 1871-72 to 1876-77. Since then the contract has been revised at intervals of five years.

Accounts of Provincial Services from 1871-72 *to* 1876-77.

* Adjustment of old error.

2. Before proceeding to comment in detail on the figures of this statement, it will be convenient to recapitulate briefly the various classes of estimates and accounts with which the Provincial Government then had to deal. There were, *first*, the estimates and accounts of *Imperial Services*, that is to say, of those branches of revenue and expenditure which had not been made over to provincial control and management. In its relation to these services, the Local Government was in the same position that it held before the introduction of the Provincial Services scheme in 1871-72. *Secondly*, there were the estimates and accounts of *Provincial Services*, or of those branches of revenue and expenditure, originally Imperial, made over to the management of the Local

Government under the system of provincial contracts. *Thirdly*, there were the estimates and accounts of the funds constituting the *Provincial Reserve*, that is, of those Local Funds, the balances of which were at the disposal of the Local Government for provincial purposes. *Fourthly*, there were the estimate and accounts of those *Local Funds* (properly so called) which are by law or by their constitution devoted to particular local and limited objects. The amount of control which could be exercised over these by Government varies considerably, and might be said to be at a minimum in the case of the District Road Fund, and at a maximum in the case of the Port Funds. Both these strictly Local Funds, and those included under the Provincial Reserve, might be divided with reference to their origin into two classes, thus—

(I)—Funds supported by compulsory rating, or by payments under sanction of law, or orders having the force of law.

(II)—Funds made up of payments of the nature of rents, tolls, or fees for services or facilities rendered or privileges conferred.

Lastly, there were the accounts and estimates of *Municipal Funds*. These, though strictly speaking local funds, were not dealt with in the Local Funds Budget of this Government, under which only the funds of the *fourth* class were treated together.

3. By its Resolution No. 1886, dated the 28th March 1877, the Government of India directed that the transactions of the Local Government, under the heading of 'Provincial Services,' should be re-incorporated in the general estimates and accounts. The effect of this order was to amalgamate, for the purposes of the Imperial Budget, the *first* and *second* classes of accounts and estimates described in the preceding paragraph. A later Resolution, No. 1072 of the 20th February 1878, re-incorporated with the estimates and accounts of Provincial Services "those resources recorded under 'Local Funds' which were at the free disposal of the Local Government for expenditure in any part of its jurisdiction without legal let or hindrance." The effect of this was to incorporate with the estimates of Provincial Services, and therefore with the Imperial estimates, the transactions of the funds treated in Bengal as Provincial Reserve (*i.e.* the *third* class above described).

4. Turning now to the statement, it must be observed first of all that the figures for the years 1871-72, 1872-73, 1873-74 include the receipts and charges of Assam, while those for the last three years of the period include the accounts for Bengal only. Secondly, it must be remembered that the Imperial assignments, originally fixed at Rs. 1,16,85,920, underwent a number of modifications, according as certain services were transferred to the management of the Government of Bengal or withdrawn from its control. The most important of these, and the only one which need be mentioned in a historical review, is the reduction of Rs. 13,30,000 on the separation of Assam. This sum was arrived at by allotting to Assam the actual average expenditure on provincial services within its limits during the last three years of its connexion with Bengal, the Bengal estimate being reduced by that sum. The average expenditure was ascertained to be Rs. 5,30,000 on provincial public works and Rs. 8,00,000 on other provincial services, and by deducting this sum the Bengal assignment was reduced in 1874-75 to Rs. 1,10,41,000, as shown in the statement. It may be added that the large increase in the allotment which appears in the year 1872-73 was due to a special grant from the Supreme Government of Rs. 8,66,677 for the price of the old Sadar Court building, and of one lakh for expenditure on the relief of the so-called Burdwan fever, which caused heavy mortality in that year.

5. Turning now to the detailed heads, we find under *Jails* an increase of nearly two lakhs in charges, against which we must set an increase of rather less than the same amount in receipts. Extended manufactures brought about larger sales on the one hand, and on the other involved increased purchases of raw material; establishments were to some extent increased, and in the scarcity years 1873—75, the larger jail population swelled the expenditure on diets.

6. The *Registration* receipts were nearly doubled owing to Sir George Campbell's liberal extension of rural sub-registry offices, but although there is no doubt that this department earned a profit on the whole, and was indeed the only

department of those transferred in 1870 in which the income was susceptible of much development, still the exact earnings cannot be stated, as the charges for buildings were provided for in the Public Works budget.

7. Owing doubtless to the transfer of the Assam districts, and probably also to some change in the form of the accounts, the *Police* figures show a reduction of nearly four lakhs under Receipts and ten lakhs under Charges.

8. *Education* receipts rose by nearly a lakh and the charges by nearly five lakhs, notwithstanding the transfer of territory to Assam. The increase under the head of receipts was mainly due to the large grants made to primary schools under the policy introduced by Sir George Campbell, while greater liberality in the bestowal of scholarships, larger grants to Muhammadan schools and district schools, and the strengthening of the inspecting agency which this policy involved, also contributed to the same result.

9. In the *Medical* Department the receipts rose from under half a lakh to about a lakh and a half, and the charges from nine lakhs to over thirteen and a half. This was due partly to the Burdwan epidemic fever, but mainly to the great extension of dispensaries and hospitals initiated by Sir G. Campbell, who admitted that in this he had not exercised so severe an economy as in other branches of administration.

10. The figures shown under the three heads *Miscellaneous, Contributions* and *Public Works*, are greatly complicated by transactions relating to the scarcity of 1873—75. Thus the receipts under Miscellaneous rose from Rs. 98,460 in 1871-72 to Rs. 33,70,092 in 1873-74 and to Rs. 77,29,059 in 1874-75, owing to the inclusion under this head of the special famine grants of Rs. 22,89,100 and Rs. 76,38,139 made by the Government of India for expenditure on relief works. Then the heavy charges shown under Contributions represent the special grants made by the Local Government to District Road Committees for the same purpose, while the greatly enhanced expenditure of the Public Works Department during the two years is also due to relief operations.

11. The same cause, unforeseen and uncontrollable expenditure on relief, accounts for the startling fluctuations which appear in the balances. In the first two years the strict economies of Sir George Campbell effected savings aggregating about seventeen lakhs of rupees under the Provincial Service heads, and the year 1872-73 opened with a balance under those heads of Rs. 22,23,126, while the balance under Provincial Reserve had risen to Rs. 16,12,440, making a grand provincial balance of Rs. 38,35,566. For the year 1872-73 very liberal grants were made under Education, Medical, Public Works, and other headings; but the closing balance under 'Service' rose to Rs. 35,58,298. This result is, however, partly to be explained, as has been mentioned above, by a special grant from the Supreme Government of Rs. 9,66,677 on account of the Sadar Court buildings, capitalization of Calcutta rents, and Burdwan fever relief. The greater part of this special grant was meant to be reserved for the erection of public offices for the Bengal Government. Under Reserve the balance fell to Rs. 9,80,683, making the aggregate provincial balance at the opening of 1873-74 Rs. 45,38,981. In 1873-74 the Local Government was called upon to face the enormous expenditure on relief works caused by the famine in Bengal and Bihar, and the year closed with a deficit of Rs. 19,037 under 'Services,' while the balance under Reserve had fallen to Rs. 5,14,704. The net provincial balance at the opening of 1874-75 was thus only Rs. 4,95,667. During 1874-75 the expenditure upon relief works continued to be heavy, but a special grant of Rs. 76,38,139 was received from the Supreme Government, and the year closed with a credit balance of Rs. 23,64,287 under Services, and of Rs. 8,23,465 under Reserve, the aggregate being Rs. 32,92,752. In the year 1875-76 the final adjustment of the famine account between the Supreme and Local Governments took place. It was estimated that if all charges on account of famine had been excluded from the accounts, the closing balance under 'Services' in 1873-74 would have been Rs. 19,21,069, in 1874-75 Rs. 13,87,787, and in 1875-76 Rs. 12,97,981. The balance under Provincial Reserve at the end of 1875-76 being Rs. 7,21,464, that year would, famine apart, have left the Local Government with about 20 lakhs of rupees in hand. The demand of the Imperial Government on account of that portion of the relief works chargeable to the Provincial Public Works

Budget being far in excess of this sum, it was arranged that the Bengal Government should surrender to the Imperial Government about 15 lakhs of its estimated credit balance; that all outstanding famine charges beyond that amount should be debited to the Imperial Government; and that the accounts should be so adjusted as to leave to the Government of Bengal an opening balance of Rs 5,00,000 on the 1st of April 1876. Owing to some trifling discrepancies in the accounts, the actual opening balance of the year 1876-77 was Rs. 5,01,180.

Contract of 1877—82.

12. With that year the scheme of decentralization, which was introduced in 1871, underwent a considerable development. Under the system as originally started, the Local Government was entrusted with the management chiefly of spending departments, such receipts as accompanied them being supplemented by large consolidated allotments for their maintenance. The only department in which the revenue outstripped the charges was Registration; Police, Jails, Education, and Medical were services under which the receipts could never be expected to bear more than a very small ratio to the charges. It was therefore chiefly with a view to economy in administration that the Government of Lord Mayo determined to make the Local Government responsible for the financial management of these branches of the Administration. In 1877 the system of decentralization took another step in advance. The Government of India, while handing over other great departments of expenditure to the Local Government, also entrusted to its use and responsibility on fixed terms of progressive payment all the principal revenues which could be deemed capable of steady expansion under careful local management. The success of the earlier measure had been sufficient to secure some extension of the principle; but the form which the extension took was in great measure determined by the decision to which the Secretary of State had come on the great question of famine relief. In his financial statement of March 1877, Sir John Strachey announced that it was the intention of the Government of India to meet charges for famine and unremunerative works out of revenue for the future. He proposed to place the Government in a position to do this, not by introducing any new Imperial taxation, but by extending the system of decentralization, and by making each Local Government responsible for the management and charges of the great public works which had been constructed, and for the construction and maintenance of those to be subsequently undertaken. He declared that the fundamental principle to be pursued in regard to public works was the enforcement of Provincial responsibility only. Bengal was the only Province, however, which was then considered able to bear the whole of its own burden. The charge for interest on productive Public Works was transferred to the Provincial account, and the Lieutenant-Governor was invited to raise by taxation the funds necessary to meet existing charges, as well as to provide for new works. The Public Works Cess Act of 1877 was accordingly introduced. Provincial responsibility for all productive works, existing and future, was definitely assumed, and the policy which the Secretary of State had affirmed was in regard to this Province carried into effect.

13. The decentralizing measures of 1877 were of a threefold character—(1) Certain departments of Revenue were made over to Provincial management, some for fixed payments, some for progressive contributions to the Imperial Treasury. (2) Certain departments of expenditure were made over to it with fixed allotments. (3) The Public Works which had been or were to have been constructed with borrowed money were made over to it without any assignment. The arrangements were mutually interdependent. The first and second were connected, because, although fixed allotments only were made for expenditure, it was well recognised that expenditure could not be fixed, but must be progressive, and it was intended that the necessary increase in charges should be met out of the profits which the Provincial Government might derive from the assigned revenues over and above the amount of its contribution. The first and third were connected, because it was similarly recognised that the large responsibilities assumed by the Local Government in regard to Public Works should be merged in the aggregate of its ways and means. It was only reasonable, therefore, that the progressive contributions under the heads of assigned

revenue should be so fixed as to leave the Local Government a margin for the discharge of its actual responsibilities, as well as for the improvement of the Province.

14. In addition to the Departments of Police, Jails, Registration, Medical, Printing, Roads and Civil Buildings transferred by Lord Mayo's Government in December 1870, with an assignment of Rs. 1,16,85,920, which had been reduced by March 1877 to Rs. 1,11,11,574, the Local Government was further entrusted, under the contract of March 1877, with the management of the following heads of revenue:—(1) *Excise*; (2) *Customs* (Miscellaneous receipts); (3) *Salt* (Minor items); (4) *Stamps*; (5) *Law and Justice* (Proper); (6) *Marine*, and (7) *Miscellaneous*, and of the following heads of expenditure:—(1) *Refunds* of the Assigned Revenues; (2) *Land Revenue*; (3) *Excise*; (4) *Customs*; (5) *Salt*; (6) *Stamps*; (7) *Administration*; (8) *Minor Departments*; (9) *Law and Justice*; (10) *Marine*; (11) *Miscellaneous*, and one or two smaller items. The allotment made under the heads of expenditure was Rs. 1,34,70,000, and the total, including the existing allotment under the heads previously transferred, was Rs. 2,45,29,000. From this was deducted a lump sum of Rs. 5,90,000, and the net consolidated grant was thus reduced to Rs. 2,39,39,000. The payments to be made on account of the assigned reductions in the first year amounted to Rs. 1,91,07,000, and this was to be increased every year by Rs. 3,75,000 under the heads of Excise, Stamps, Law and Justice. The balance represented the Imperial allotment to the Provincial revenues, which, subject to adjustments, was thus to be Rs. 48,32,000 in 1877-78, Rs. 44,57,000 in 1878-79; Rs. 40,82,000 in 1879-80; Rs. 37,07,000 in 1880-81, and Rs. 33,32,000 in 1881-82.

15. The following table shows the progress of the Provincial revenue and expenditure during the five years 1877—82. The Revenue side of the account includes the proceeds of the Public Works cess, and the receipts from Railways and Canals. On the expenditure side appear the charges for interest on the Capital expended and the cost of maintenance. The sum entered as a receipt under Assessed Taxes is simply the grant made to the Provincial revenues to meet the cost of collections and refunds on account of the License-tax.

* Decrease owing to the miscellaneous refunds now being charged against the particular service heads to which they refer.

† This is for cost of European stores included in accounts and future estimates under contingencies of the minor heads of service for which the stores are purchased.

‡ Includes Rs. 11,31,862 on account of 42 (now 41)—Miscellaneous Railway Expenditure.

16. Owing to short collections of the Public Works Cess in 1877-78, to the absence of any receipts under assessed taxes, the license tax not having then been introduced, and to various differences in the form of the accounts, it is only from 1878-79 that accurate comparison of the condition of the finances in the different years is possible. The gross revenue was Rs. 3,20,78,000 in 1878-79; it had risen to Rs. 3,77,61,000 by 1881-82. In other words, the revenue had increased at the rate of about 15 lakhs of rupees a year during the three years, though there had been no new taxation in the interval.

17. The progress of the revenue under *Excise* during this period is remarkable. While the revenue increased from 70¼ lakhs in 1878-79 to 85⅓ in 1880-81 and 93¾ in 1881-82, the cost of collecting it declined from Rs. 2,83,000 to Rs. 2,73,000. This was the result partly of the extension of the outstill system, and partly of the great prosperity of the province during this period.

18. A succession of good harvests with high prices had provided the people with money to spend on luxuries, and among these exciseable articles, in this as in all countries, hold a high place. There was a large increase in the consumption of duty-paying liquor where the sadar distillery system had been maintained, and also in the consumption of excise opium, of piece-goods, and of everything on which prosperous peasants are disposed to spend their surplus funds. The revenue from excise opium was Rs. 12,49,000 in 1877-78, Rs. 13,35,000 in 1878-79, Rs. 13,62,000 in 1879-80, Rs. 13,95,144 in 1880-81 and Rs. 14,47,000 in 1881-82. The increased consumption of piece-goods also bore unmistakeable testimony to the increased prosperity of the country, and confirmed the view that the excise revenue had been to a great extent improved by the greater spending power of the people. The value of these goods carried to Bengal or Bihar districts by the Eastern Bengal and East Indian Railways was Rs. 6,44,31,000 in 1879-80 and Rs. 6,91,16,000 in 1880-81.

19. The excise revenue was made over to the management of the Provincial Government for a payment rising from 64 lakhs in 1877-78 to 68 lakhs in 1881-82. The gross profit made by the Bengal Government was thus roughly 4½ lakhs in the first year, 5½ lakhs in the second, 6 lakhs in the third, 18⅓ lakhs in the

fourth, and 25¾ lakhs in the fifth. The fixed grant for managing the revenue was Rs. 2,92,000. The actual cost was Rs. 3,06,000 in 1877-78. This was reduced by careful management to Rs. 2,73,000 in 1881-82. Thus in 1881-82 the excise receipts exceeded the receipts of 1877-78 by no less than twenty-five lakhs of rupees, while the expenditure for collecting the revenue and managing the department showed a reduction of Rs. 33,000.

20. Under *Stamps* the increase, though less rapid than under Excise was nevertheless very satisfactory and sustained. The actual receipts in 1876-77 were Rs. 95,48,000, and the revenue was made over to the Provincial Government for a payment rising by 2½ lakhs a year from Rs. 98,50,000 in 1877-78 to Rs. 1,08,50,000 in 1881-82. In 1877-78, however, there was a large increase in receipts owing to the operations under the Land Registration Act, and the actual revenue collected was Rs. 1,08,15,000. In 1878-79 the receipts were Rs. 1,07,85,000. In 1879-80 the receipts rose to Rs. 1,14,99,000, and in 1881-82 to Rs. 1,20,24,000. The increase in the estimated receipts, however, arose from a change introduced by the High Court in the procedure for obtaining copies of documents, and there was a corresponding decrease in fees formerly credited to Law and Justice, and an increase in the cost of establishments debitable to the same head. The steady and substantial increase in the Stamp Revenue from Rs. 95,48,000 in 1876-77 to Rs. 1,20,24,000 in 1881-82 was undoubtedly to a great extent the result of the increased circulation of wealth in the country, and of increased facilities for obtaining justice. But much of the increase was also due to the improved administration of the department and to the special measures taken to discover and check fraud in the use of stamps. The gross profit of the Provincial Government was roughly 9½ lakhs in 1877-78, 6¾ lakhs in 1878-79, 11½ lakhs in 1879-80, 8 lakhs in 1880-81, and 11¾ lakhs in 1881-82. The fixed grant for managing this department of the revenue was Rs. 2,38,000. The actual cost was Rs. 2,48,000 in 1877-78 and Rs. 2,51,000 in 1878-79. It amounted to Rs. 4,24,000 in 1881-82. The increase in the first year corresponds with the increase in the receipts. Larger sales of stamps must be attended by increased charges for discount. The increase in the later years was due to the transfer of the actual cost of the stamps from the head of "Stationery." The fixed grant under "Stationery" for both stamps and stationery was Rs. 4,98,000. The actual expenditure on both was Rs. 6,89,000 in 1878-79.

21. Under *Registration* the receipts steadily increased, though the progress was not so rapid in the later as it was in the earlier years. The figures from 1878-79 included Record-room receipts and Land Registration fees transferred from Land Revenue. The Registration receipts proper were Rs. 6,61,000 in 1877-78, Rs. 8,70,000 in 1878-79, Rs. 9,09,000 in 1879-80. They were only Rs. 3,66,978 in 1871-72, the first year that the revenue was under Provincial management. With increased receipts there was naturally an advance in the charges for commission on fees, by which most of the Sub-Registrars are remunerated.

22. *Law and Justice* was the third of the branches of revenue surrendered in 1877 for a progressive payment. The actual receipts in 1876-77 were Rs 7,30,000. The revenue was surrendered to the Provincial Government for a payment rising by ¼ lakh a year from Rs. 7,25,000 in 1877-78 to Rs. 8,25,000 in 1881-82. The actual receipts were Rs. 8,05,000 in 1877-78, Rs. 10,52,000 in 1878-79, and Rs. 10,80,000 in 1879-80, while they rose to Rs. 17,17,000 in 1881-82. The increase in the revenue was chiefly under the head of Fees, and corresponded in some measure with the increase under Stamps. The falling off in the later years is explained by the new procedure already alluded to in connection with stamps. The expenditure under Law and Justice showed a large increase from Rs. 63,77,000 in 1877-78 to Rs. 87,43,000 in 1881-82. The fixed grant for this service under the five years' settlement between the Imperial and Local Government is Rs. 62,97,000. There was thus a heavy charge on Provincial Funds. It was, however, precisely in order that the Local Government might have the means of providing for improved administration, involving increased expense, that improveable revenue was made over to it. The Lieutenant-Governor was able to strengthen the Subordinate Executive Service, and to increase the number of munsifs to meet the growing wants of the country in the administration of Civil Justice.

23. Under *Jails* the receipts were Rs. 6,89,000 in 1877-78. They amounted to Rs. 6,96,000 in 1879-80. The charges, on the other hand, rose from Rs. 16,51,000 in 1877-78 to Rs. 18,41,000 in 1879-80. For 1880-81 they are estimated at Rs. 17,00,000, and for 1881-82 at Rs. 22,52,000.

24. The fixed grant for the charges on account of *Land Revenue* made in 1877 was Rs. 22,62,000. With the charges which this was intended to cover were amalgamated others, chiefly for sub-divisional establishments, which were originally Provincial. The gross cost of all in 1876-77 was Rs. 23,53,000. The growing wants of the administration, however, since carried the expenditure far beyond this limit. A grant of Rs. 1,80,000 was made for the management of Government estates. Establishments were strengthened and made more efficient, and additions were sanctioned to the staff of Deputy Collectors.

25. The expenditure on *Education* was Rs. 19,58,000 in 1871-72. This included the charges in Assam. In 1875-76 the expenditure in Bengal amounted to Rs. 26,32,000. In the next year Sir Richard Temple under financial pressure reduced the expenditure to Rs. 24,48,000. Sir Ashley Eden was able to make full provision for the needs of this important department. He replaced one lakh of rupees reduced from the grant for Primary Education in 1876-77, and the gross expenditure allowed for 1881-82 was the liberal sum of Rs. 27,76,000.

26. In the *Medical* administration important savings were made. The management of the Metropolitan Hospitals was reformed and much waste of public money prevented. Government aid to dispensaries in the interior no longer took the form of a free supply of expensive instruments and drugs, and careful management ensued from the responsibility thus thrown on the directing Committees. The charges which amounted to Rs. 14,86,000 in 1875-76, Rs. 13,63,000 in 1876-77, and Rs. 13,85,000 in 1877-78, were reduced to Rs. 12,31,000 in 1878-79 and Rs. 10,75,000 in 1881-82. With this reduction in cost there was an increase in the number of persons actually receiving medical aid.

27. It will be convenient to consider together the figures under *Public Works* and the figures of the *Interest* payable on the capital invested in them. In 1877 the following works were made over to the management of the Government of Bengal with the responsibility for the payment of the interest charges on the capital expended on their construction:—Northern Bengal Railway, Tirhut Railway, Nalhati Railway, Orissa Canals, Midnapore High Level Canal, Hidgellee Canal, and Sone Canals. The Calcutta and South-Eastern Railway was also made over; but as this line had been making barely sufficient to cover the working expenses, no interest was charged on the capital. The amount of capital expenditure on which the Provincial Government was liable for interest up to the end of 1877-78 was—

	Rs.
Railways	2,10,17,000
Canals	4,56,43,000
	6,66,60,000

The sum due for interest on this capital was Rs. 30,00,000; but in consideration of the short levy of Public Works Cess, the Government of India only took Rs. 20,00,000 in that year. In 1878-79 the capital expenditure on Railways was Rs. 66,41,000 chiefly on the extension of the Northern Bengal line and the construction of the Patna and Gaya line. The expenditure on Canals was Rs. 25,44,393. In 1879-80 the expenditure was Rs. 22,12,000 on Railways and Rs. 16,14,000 on Canals. Of the first sum, however, Rs. 3,15,000 was provided from Provincial Funds in order to expedite the completion of the Patna-Gaya line. In 1881-82 the expenditure on Railways amounted to Rs. 30,34,000. chiefly for the extension of the Tirhoot line to Bettiah on the west and Peepra Ghât on the east, and Rs. 36,60,000 for expenditure on Canals.

28. In 1877-78 the receipts under *Railways* amounted to Rs. 7,32,000 and the charges to Rs. 6,26,000, while the charges for interest amounted to Rs. 8,26,000. The Northern Bengal line was only opened from Porada to Jalpaiguri in January 1878; and the extensions from Parbatipur to Rangpur and from Siliguri to Jalpaiguri were only ready for traffic, the former in July and the latter in November 1878. The Patna-Gaya line and the extension of

the Northern Bengal line to Kaunia on the Teesta were opened for traffic in June 1879. In 1880 the Lieutenant-Governor was permitted by the Government of India to begin, as a Provincial work, the construction of a line from Sonapore on the Calcutta and South-Eastern line to Mugra Hát, an important mart in the 24-Parganas district, and a sum of Rs. 2,‿0,000 was expended upon it from Provincial Funds. This line was constructed on the broad gauge, and was afterwards extended to Diamond Harbour. The estimates for 1881-82 included a charge of Rs. 7,50,000 for expenditure on this line. Provision was also made for the expenditure of Rs. 4,50,000 for preliminary work on a line to connect Parbutipur on the Northern Bengal Railway with the important town of Dinajpur, and of two lakhs for raising and bridging the road from Mugra to Diamond Harbour to make it available for railway extension.

29. The *Canals* which were taken over by this Government in 1877 were financially of a very different character from railways, and there was no hope of their being in a position to pay the interest on the capital invested in them for many years to come. The construction of the Orissa, Midnapore, and Hidgelee Canals was originally undertaken in 1863 by the East Indian Irrigation and Canal Company, with the most extravagant expectations of profit. Five years after the work had been begun, the Government of India purchased the canals from the Company for Rs. 1,17,28,560, and proceeded to develop a modified scheme. Up to the present these works have been a heavy drag on Provincial resources, which have to bear the charges. The receipts from irrigation on the Orissa and Midnapore Canals, however, show a steady increase; leases are taking the place of yearly agreements; and, as the system of distributaries is extended, it is hoped that the revenue will gradually develop. The opening of the Sone Canals gave a great impetus to the extension of sugarcane cultivation, and caused a considerable increase in the agricultural wealth of the tracts supplied. The Commissioner, in 1879-80, estimated the increase of profit derived from this source by the people of Shahabad at Rs. 4,73,000 per annum.

30. The following table shows the net receipts from each work during the period 1877-82, with the interest charges payable in each year:—

	1877-78.	1878-79.	1879-80.	1880-81.	1881-82.
	Rs.	Rs.	Rs.	Rs.	Rs.
Orissa Canals	—54,970	—57,090	—96,996	—40,000	(—)1,06 000
Midnapore „	—33,730	—2,120	92,822	27,000	22,000
Hidgellee „	81,720	37,610	3,500	29,000	19,000
Sone „	—1,51,110	67,120	1,74,291	6,000	2,79,000
Total net receipts ...	—2,08,090	45,520	1,73,614	22.000	2,14,000
Interest charges ...	20,03,270	21,20,416	22,04,767	22,75,000	20,75,000

31. Apart from these schemes, the Government of Sir Ashley Eden also undertook other irrigation and canal works from Provincial Funds. A sum of Rs. 6,28,000 was spent on a canal to connect the river Gunduk with the principal water-courses of the Saran district. A still more important work was the Joojooty Scheme, whereby a constant supply of pure water from the river Damoodah was poured into old channels in the Burdwan and Hooghly districts. The silting up of these channels was undoubtedly for many years the cause of much disease and suffering throughout a large tract of country, and the introduction of a copious supply of pure water for drinking and irrigation purposes was expected to have a marked effect on the health and prosperity of the people. With the admission of the river water there was an almost entire disappearance of the epidemic which so long raged among the villages situated on the banks of the silted-up channels in the Hooghly district. It was calculated that nearly nine-tenths of the inhabitants of these villages were swept away in the epidemic which prevailed before 1877. The beds of these water-courses were studded with pools of stagnant water, which, as the dry season advanced, became more and more fœtid and noxious, and spread disease and death among the people who consumed the fluid. At the same time the drainage of the country was obstructed by the endeavours of the people to collect and retain water for agricultural purposes.

32. Sanction was also given to the construction, from Provincial Funds, of a navigation canal to connect the existing tidal canal in Hidgellee with the Orissa system. This was a work of the first importance. Orissa was then wholly

dependent on the sea for its communications with Bengal; the coasting trade could only be carried on by large vessels; the ports were bad; and if any serious failure of the crops occurred, it was impossible to throw a sufficient supply of food into the province. The projected canal was intended to bring Orissa into direct inland communication with Bengal, so that steamers and country boats would be able to ply at all seasons of the year, and while the province will be protected from famine, a large expansion of trade might be confidently expected.

33. It is not possible to make any useful comparison of the expenditure under *other Public Works* before and after the contracts of 1877. The expenditure on works during the scarcity of 1874 was abnormal, the Provincial balances were exhausted, and the Government of India found it necessary to accept the outlay, and to make the local Government a net grant of five lakhs with which to begin the year 1876-77. The expenditure on Ordinary Public Works during that year was Rs. 25,59,000. In 1877-78 Sir Ashley Eden found it necessary to proceed with extreme caution in the matter of expenditure. The charges thrown upon the Provincial revenues on account of Productive Public Works were very serious; the full outturn of the Public Works Cess could not be obtained during the year; and he recognized the necessity of securing a substantial working balance to provide for emergencies. The expenditure in this year was therefore restricted to Rs. 25,12,000. In framing the revised estimates for 1878-79, the Lieutenant-Governor found it possible to make provision for various important and useful schemes that had been left in abeyance for want of funds; but in this year and the next the expenditure was, under instruction, kept down in consequence of the financial difficulties which famine, war, and adverse exchange had brought upon the Government of India. In 1879 the Government of India found itself compelled to call upon Local Governments to make all possible reductions in expenditure. The orders went so far as to direct that no new work estimated to cost more than Rs. 2,500 should be commenced, even though it might have already received the sanction of Government. In order to avoid the necessity of peremptorily putting a stop to works, the Lieutenant-Governor offered a special contribution of 20 lakhs to Imperial Funds. Under the influence of the same policy of retrenchment unduly low estimates were made for 1880-81, but the Lieutenant-Governor was afterwards permitted by the Government of India to increase the grant by 20 lakhs, and the expenditure during the year was Rs. 47,60,000. In 1881-82, the Public Works expenditure aggregated Rs. 67,58,000 and included, besides miscellaneous improvements on buildings, and on the construction, bridging, and metalling of Provincial roads, provision for new Court-houses at Sealdah, Jessore, Mymensingh, Dacca, Ranchi, Gaya, Darbhanga, and Motihari, for various sub-divisional buildings and Munsifs' Courts, for new Jails at Jalpaiguri, Bogra, Pabna, Gaya, Darbhanga, and Motihari, for a college at Rampur-Boalia, and a Railway school at Kurseong, and for the completion of the new Secretariat buildings and the new Obstetric Hospital at the Medical College.

34. That the system of decentralization was up to this time thoroughly successful in Bengal is sufficiently clear from the foregoing sketch. The revenues increased rapidly, independently of any new taxation; useless expenditure was curtailed; and funds were made available for improvement under all branches of the Administration. The three heads of improveable revenue made over to the management of the Provincial Government, with an income of 165¼ lakhs in 1876-77, showed an income of not less than 213 lakhs in 1881-82. In the meanwhile, the Government was able to carry out numerous works of improvement, many of which, under the previous system, would have been indefinitely postponed. Besides making a special contribution of 20 lakhs to the Imperial treasury in time of need, means were found during these five years to increase the staff of executive and judicial officers; to provide increased facilities for the administration of justice; to increase the grant for education; to make grants-in-aid of district communications, and of works of drainage, sanitation, and municipal improvement; to build schools, colleges, and hospitals; to replace the huts in which the public business was transacted, or prisoners were confined, by substantial masonry court-houses and jails; to spend 20 lakhs on railways which have since brought in a large return, 5½ lakhs on tramways, ¾ of a lakh on a steamer service to improve communications with Assam, and 2 lakhs on a road to develop the trade with Thibet; to lay out 11 lakhs on the first portion of a work which will develop the trade of Orissa and protect it from famine;

and to devote 38¼ lakhs to improving navigation and providing a supply of pure water for the people. While 77½ lakhs were thus expended on great measures of material improvement, and the expenditure on Ordinary Public Works was increased from Rs. 25,12,000 in 1877-78 to Rs. 67,58,000, exclusive of expenditure on preliminary works of railway construction, in 1881-82, and while no legitimate outlay was spared to strengthen every department of the Administration, the five years' period, which opened with a credit balance of Rs. 2,88,000 only, closed with a credit balance of Rs. 75,43,000. When it is recollected that under the system which prevailed before 1871 every new charge required the sanction of the Imperial Government, that the decision on the demands of each province took no cognizance of the extent to which it had contributed to the general Exchequer, that nothing was to be gained by economy, because money left unspent by any one Government was practically lost to it, and only went to increase the amount to be scrambled for by all, some idea may be formed of the advantages which Bengal had reaped up to this time from the control of its own finances.

35. The principal features of the contract of 1877 have been described above. The Local Government was allowed, as in the first contract of 1870, to appropriate the whole of the receipts under the heads of Police, Jails, Registration, Education, Medical, Printing, Roads and Civil Buildings, and received in addition a gross annual allotment of Rs. 1,10,59,000 to meet the charges on account of these departments. The receipts from *Excise*, *Stamps*, and *Law and Justice* (proper) were also made over to the Provincial Government in consideration of a payment to the Imperial Treasury of lump contract sums, which were to increase by one lakh per annum in the case of Excise, and 2¾ lakhs per annum in the case of Stamps and Law and Justice. The following heads of revenue were also made over in return for fixed contract payments, viz., *Customs* (miscellaneous receipts), *Salt* (minor items), *Marine* and *Miscellaneous*. On the expenditure side, the Local Government was entrusted with the management of the following heads of expenditure, receiving in each case an annual grant of fixed amount:—*Refunds* of the assigned revenues, *Land Revenue*, *Excise*, *Customs*, *Salt*, *Stamps*, *Administration*, *Minor Departments*, *Law and Justice*, *Marine*, *Miscellaneous*, and one or two smaller items. Simultaneously—and this was one of the most important elements of the contract—the gross receipts of certain railways and canals which had been, or were to be, constructed with borrowed capital were transferred to the Local Government, which also became responsible for the working expenses of the same and for the payment to the Imperial Government of the interest charges on the capital with which they had been constructed. As these interest charges were expected to exceed considerably the net earnings of the works thus provincialised, the Lieutenant-Governor was authorised to impose special provincial taxation to make up the deficiency, and to this end the Public Works Cess was imposed by Act II (B.C.) of 1877. The provincialisation of these charges for interest, and the introduction of the Public Works Cess, formed integral parts of Sir John Strachey's scheme of famine finance.

36. The contract of 1877 thus fell naturally into three parts—(1) in respect of the branches of service which had been provincialised by Lord Mayo, the old principle was retained: a fixed annual grant was made from Imperial revenues, which, together with the receipts of those departments, was expected to cover their expenditure, any growth of charges being provided for from the increase in the receipts. (2) In respect of the civil heads of revenue and expenditure then provincialised for the first time, a separate contract was made for each head of revenue and for each head of expenditure; the rates of increase in the payments on account of the revenue from Excise, Stamps and Law and Justice being advisedly taken at a low figure, so as to leave the Local Government a margin wherewith to meet the normal growth of civil expenditure for which no direct allowance was made. (3) In respect of public works constructed from borrowed capital, the Lieutenant-Governor was authorised to resort to local taxation to make good the deficit of interest charges in excess of net earnings.

37. The contract, which came into force in 1882, differed materially from that which it succeeded. The principles on which it proceeded were the following:—

Contract of 1882—87.

Instead of giving the Local Government a fixed sum of money to make good any excess of provincialised expenditure over provincialised receipts, a certain proportion of the Imperial revenue was devoted to this object. A few heads

were reserved as Imperial; others were divided in proportions, for the most part equal, between Imperial and Provincial; the rest were made Provincial. The balance of transfers, being against the Local Government, was rectified by a fixed percentage on its Land Revenue otherwise reserved as Imperial. At the same time a distinct declaration was made of the policy to be followed during the term of the contract. The Imperial Government was to make no demand on the Local Government, except in the case of disaster so abnormal as to exhaust the Imperial reserves and resources, and to necessitate a suspension of the entire machinery of public improvement throughout the Empire. On the other hand the Local Government was to look for no special aid from the Imperial Government, except in the case of severe famine, and then only within the following limits:—(1) current income must have been exhausted, every avoidable expense in every department having been retrenched, and the public works grants applied to famine work to the very utmost possible; (2) savings of past years in excess of the ordinary working balance must have been drawn upon to two-thirds of their total amount; (3) the margin of Provincial surplus in normal was made be liable for the completion of works begun as relief works, and where there was no need of such completion, was to be chargeable up to one-fourth at most for payment of interest on any Imperial loans which may have been raised to meet the excess cost of the famine in general.

38. The following were the principal additions made to the provincial receipts and charges under the new scheme:—This Government was admitted to a half share in the receipts from Forests and Assessed Taxes, and took all the receipts under the heads of Superannuations, Miscellaneous, and Other Public Works, except contributions from the military and medical funds; gain by exchange on Imperial transactions, premium on bills and unclaimed bills of exchange; receipts from military works; and any unspecified miscellaneous receipts exceeding Rs. 10,000. Under Forests and Assessed Taxes it was liable for half the charges. The Imperial Government only retained under Land Revenue the same percentage on charges for collection and on the cost of surveys and settlements as was retained of land revenue. To the existing provincial charges was added under Law and Justice and Medical all that was reserved as Imperial; under Stationery and Printing all except the cost of stationery purchased from central stores; and under Other Public Works, the charges for Museums, Educational Buildings, and Light-houses. On the other hand, one-half the net receipts from Excise, Stamps, and Registration, including record-room fees, was surrendered to the Imperial Government. The percentage of Land Revenue was, however, only calculated after allowing for the claim of the Government of India to share in the general improvement that had resulted to the Provincial revenues during the five years then just expired. That share was fixed at 30 lakhs a year. From this the Government of India deducted three lakhs to be expended on the improvement of the Subordinate Executive and Judicial Services and the establishment of the new district of Khulna. In order, too, that the Local Government might not be embarrassed by a sudden reduction of 27 lakhs in its income, His Excellency the Governor-General in Council added a sum of 28½ lakhs to the credit balance of the Province for 1881-82.

39. The amount of percentage of Land Revenue which, under the new scheme was assigned to this Government, was calculated, as stated above, upon the basis of the regular estimate for the year 1881-82. It was fixed at 32·2284. A sum of Rs. 30,00,000 was, on account of the annual contribution to the Government of India, added to the Provincial deficit, provision being at the same time made for an additional expenditure of three lakhs for the improvement of the Subordinate Civil Service and for a new district of Khulna.

40. The chief points in which the contract of 1882 differed from that of 1877 were the following:—*First*, the excess of provincialised expenditure over provincialised receipts was balanced, not by an annual allotment of fixed amount, but by a fixed percentage of the land revenue of the Province. Inasmuch as the receipts credited under Land Revenue are to some extent capable of improvement, and ordinarily show a tendency towards steady, if small, increase, this change was to the advantage of the Local Government. *Secondly*, the Local Government was no longer permitted to appropriate the whole of the increase in the three principal sources of improvable revenue, viz., Excise, Stamps, and Registration. Under the former contract, the increase which the Local

Government had to surrender was only one lakh of rupees per annum under Excise, 2¾ lakhs per annum under Stamps (combined with Law and Justice), and *nil* under Registration; whereas the actual rate of increase averaged nearly six lakhs per annum under Excise, 4¾ lakhs under Stamps and Law and Justice, and Rs. 90,000 under Registration. Under the old contract the whole of this profit went to the Local Government: under the new arrangement one-half went to the Government of India. This change operated greatly to the disadvantage of the Provincial revenues, whose expansive power was thereby largely diminished.

41. The *third* point of difference between the contracts of 1882 and 1877 lay in the extension of the interest of the Local Government to the revenue heads of *Assessed Taxes* and *Forests*, and to the receipts and expenditure under *Superannuations*, and certain sub-heads of branches of service of which the bulk was already Provincial.

42. The last important point of difference was that the contract of 1882 was a *consolidated* contract. In other words, no attempt was made to estimate the future receipts and expenditure under separate heads and to fix distinct assignments for each. The new arrangements were applied to the revised estimates for 1881-82 as a whole; the total receipts were compared with the total expenditure; and (after making a deduction of 27 lakhs from the Revenue side, being the share of the profit on the old contract which the Imperial Government decided to appropriate) the adjusting percentage of Land Revenue was calculated so as to balance the account.

43. following statements show the actual receipts and expenditure of the period 1882-87.

45. The figures shown in the last paragraph against *Land Revenue* receipts are the net sum credited to Provincial after all adjustments had been made. Eliminating these, we get the following result :—

	Contract estimate.	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Land revenue proper ...	1,21,34,000	1,22,28,000	1,22,20,000	1,20,60,000	1,24,28,000	1,24,97,000
Grant for Government estates	1,95,000	3,94,000	3,69,000	3,94,000	3,85,000	4,25,000
Total ...	1,23,29,000	1,26,22,000	1,25,89,000	1,24,54,000	1,28,13,000	1,29,22,000

46. When it is remembered that only a small part of Bengal is temporarily settled, and that 1884-85 and 1885-86 were years of unfavourable harvests, the improvement seems fairly satisfactory. The improvement on the grant for the management of Government estates (which was then fixed at 10 per cent. on collections and has since been raised to 12) was much greater than in the case of Land Revenue proper. This, however, did not represent any real relief to the Provincial revenues, as the whole amount of this grant was devoted to the improvement of the estates in question.

47. The expenditure charged under *Land Revenue*, which was wholly Provincial (except the charge for Surveys and Settlements, which was divided in the same proportion as the receipts are divided), rose from Rs. 28,91,000 to Rs. 35,00,000, or by Rs. 6,09,000 in five years. The chief causes of increase under this head were the creation of the district of Khulna, the improvement in the pay and position of the Subordinate Executive Service (half of whose salary is shown against Land Revenue, and half against Law and Justice), and the additional expenditure on Government estates, which was balanced by the higher receipts referred to in the last preceding paragraph. The pay of the Directorship of Agriculture, which was sanctioned in 1884 temporarily for two years, was also shown under this head, as well as the Provincial share of the survey of Muzaffarpur under the Tenancy Act. These two items, which were not in existence when the contract was made, alone account for Rs. 1,12,000 of the total increase.

48. Under the head of *Stamps*, the development of he revenue was steady and continuous. The total receipts, which had risen from Rs. 1,08,15,000 in 1877-78 to Rs. 1,20,24,000 in 1881-82, again rose to Rs. 1,32,58,000 in 1885-86, and to Rs. 1,34,63,000 in 1886-87. The contract estimate of receipts (Provincial share) was taken at 59 lakhs, while the actuals were Rs. 61,07,000, Rs. 62,88,000, Rs. 64,96,000, Rs. 66,29,000, and Rs. 67,32,000 respectively. The profit of the Local Government on the contract under this head was therefore about 2 lakhs in the first year, 3¾ lakhs in the second, 6 lakhs in the third, 7¼ lakhs in the fourth, and 8⅓ lakhs in the fifth. The increase was uniformly distributed over the whole period of the contract. There was no legislation during this period affecting the

stamp laws, but a material portion of the improvement in the revenue was undoubtedly due to the arrangements under which process-serving fees in revenue courts, and copying fees, were levied in court-fee stamps instead of in cash. To the former cause at least Rs. 50,000 of the increase in 1884-85 were due, and larger sums in the following years. The remainder of the increase, of which two lakhs came under non-judicial stamps, and upwards of 10 lakhs under court-fees, was attributable to improved administration and greater facilities for obtaining justice. The expenditure of this department, the contract grant for which was fixed in 1881-82 at Rs. 2,17,000, was Rs. 2,14,000, Rs. 2,20,000 Rs. 2,34,000, Rs. 2,46,000, and Rs. 2,43,000 in each year of the contract, the ultimate increase being only Rs. 26,000. More than half of this increase, small as it is, was due to the greater cost of the new description of court-fee stamps introduced during 1884-85 for greater security against fraud. The direct cost of raising the stamp revenue in Bengal was slightly over 3¾ per cent.

49. Under the previous contract, the extraordinary development of the revenue from *Excise*, and the consequent profit to the Provincial revenues, were among the most striking features of the financial history of the period. Between 1877-78 and 1881-82 the receipts from this source rose from Rs. 68,68,000 to Rs. 93,74,000, or by close upon 25 lakhs of rupees; and the whole of this, except 4 lakhs, represented clear gain to the Local Government. Simultaneously the corresponding charges were reduced by improved administration from Rs. 3,06,000 to Rs. 2,73,000. This remarkable increase was due partly to the outstill system, the general adoption of which dates from the first year of Sir Ashley Eden's government and also to the bumper harvests, the activity of trade, and the general prosperity of the country which marked the three years 1879-80, 1880-81, and 1881-82.

50. A serious check in the excise revenue was anticipated by Sir Ashley Eden, and his anticipations were fulfilled to the letter. The flood tide of commercial and agricultural prosperity reached high-water mark in 1883, and the ebb was swift and extreme. The rainfall in that year was deficient and unevenly distributed; and though no actual distress occurred at that time, the advance in the price of food and the recession in the wages of labour in the western districts injuriously affected the settlements of the outstills, which are highly sensitive to seasonal influences. The revenue from country spirits in 1884-85 fell short of that of the previous year by Rs. 1,13,000 (the decrease being almost entirely in the Patna Division), and this would have been more than doubled but for a large apparent increase of Rs. 1,28,000 in Calcutta, which represented advance payments for the triennial period 1884-87. In 1884 and 1885 the rainfall was again unfavourable in quantity and distribution, and the failure the crops was so serious in parts of the Burdwan, Presidency, and Rajshahi Divisions as to exhaust the reserves of the villagers and necessitate the opening of relief works by Government. In 1883, a Commission was appointed under the presidency of Mr. Edgar, C.S.I., to enquire into the working of the outstill system and its chief recommendations were approved by Government and carried into effect. The Sadar distillery system was re-introduced into all considerable towns where country liquor is the principal alcoholic drink of the people. These include Patna, Gaya, Arrah, Chapra, Bettiah, Muzaffarpur, Darbhanga, Monghyr, Jamalpore, Bhagalpur, Murshidabad, Berhampore, Burdwan and Dacca. The hours of working and sale were contracted. The sale of liquor to children was rigidly prohibited. District officers were instructed to allow District and Municipal Boards a voice in the selection of sites and other matters of local interest; and a large addition was made to the supervising and detective staff including ten Special Deputy Collectors, who were selected for their knowledge of and aptitude for excise work, and who were employed on that work alone. The increase of expenditure incurred in giving effect to these proposals was considerable.

51. The head of *Provincial Rates*, which is wholly Provincial, represents principally the proceeds of the Public Works Cess, but it includes also the rates for the general management of Wards' and Attached estates, and from October 1886 the recoveries from District Funds of the proportional cost of collecting Road Cess. The contract estimate of receipts was taken in 1881-82 at Rs. 35,40,000, and the actuals in each year were Rs. 36,07,000, Rs. 38,15,000, Rs. 37,65,000, Rs. 38,71,000, and Rs. 39,95,000. The profit of the Local Government was

therefore Rs. 67,000 in 1882-83, Rs. 2,75,000 in 1883-84, Rs. 2,25,000 in 1884-85, Rs. 3,31,000 in 1885-86, and Rs. 4,55,000 in 1886-87. This increase was due to revaluations which were in progress in almost every district during the period of the contract.

52. The head of *Assessed Taxes*, which was wholly Imperial under the former contract, and was equally divided between Imperial and Provincial in the contract of 1882, represents the receipts of the abolished License-tax. The Income-tax was at first wholly Imperial; and the figures shown under this head for 1886-87 merely represent the grants made by the Supreme Government—of amounts equal to those credited to Provincial in 1885-86—to avoid the disturbance of the contracts. The depression of trade, which marked the greater part of the period 1882—87, and which was intensified for Bengal by special causes, such as the through opening of the Rajputana-Malwa State Railway in the latter part of 1881, and the consequent diversion of a part of the trade of Northern India to Bombay, injuriously affected the receipts from this source. The contract of 1882 was framed on the basis of a revenue of Rs. 8,25,000 (Provincial share) from this source, whereas the actuals were Rs. 7,60,000, Rs. 7,59,000, Rs. 7,48,000, Rs. 7,67,000, and Rs. 7,67,000, respectively. The aggregate loss to the Provincial revenues exceeded therefore 3¼ lakhs of rupees during the currency of the contract, notwithstanding that special efforts were made to ensure the accuracy of the assessments, and to prevent the escape of persons legally liable.

53. The Public Works Cess and the License-tax represent the taxation imposed in Bengal (the former being peculiar to the province) in connection with the scheme of "famine finance," with which the name of Sir John Strachey is associated. That scheme proposed to improve the financial position of the Empire to the extent of two crores of rupees a year, of which 50 lakhs were to be regarded as a normal working surplus, while 150 lakhs were to be devoted to famine insurance, being expended either on actual relief, on reduction of debt, or on the construction of remunerative works calculated to prevent or mitigate the severity of famine. Part of this sum it was proposed to provide by new taxation (*i.e.* by the License tax), and part by throwing additional charges on the Provincial Governments; but as far as Bengal is concerned, the whole contribution paid towards the so-called Famine Fund was raised by additional taxation; for the charges thrown on Provincial by the Contract of 1877, which consisted mainly of the interest on provincialized railways and canals, were met by the imposition of the Public Works Cess, which, as already stated, is peculiar to Bengal. The total net sum contributed by Bengal in each year since 1878-79 under those two heads was as follows:—

Net contribution (receipts, less cost of collection).	1878-79.	1879-80.	1880-81.	1881-82.	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Assessed taxes ...	17,21,000	20,88,000	12,18,000	15,43,000	14,26,000	14,22,000	14,02,000	14,46,000	*14,46,000
Provincial rates ...	35,93,000	35,67,000	34,68,000	35,03,000	35,60,000	37,68,000	37,18,000	38,04,000	38,59,000
Total ...	53,14,000	56,55,000	46,86,000	50,46,000	49,86,000	51,90,000	51,20,000	42,50,000	53,05,000

* The substitution of the Income-tax for the License-tax makes it impossible to determine the correct contribution to be paid in 1886-87. But it may be assumed that the License-tax, if continued, would have yielded the same amount as in 1885-86.

54. In 1880-81 the minimum assessable limit was raised to Rs. 500, with the result of exempting about 66,567 assessees of the poorest classes, and giving up about 5½ lakhs of net revenue. These figures show that since 1878-79, the first year in which the new taxes were in full operation, the people of Bengal paid rather more than half a million sterling per annum as an insurance against famine. During this period the only expenditure in the province on actual relief of famine or the construction of protective works was as follows:—

	1878-79.	1879-80.	1880-81.	1881-82.	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.	Total.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Famine Relief	......	......	......	......	62,940	12,760	14,841	1,23,840	Nil.	2,14,381
Protective works, Railways ...	......	......	......	......	Nil.	Nil.	Nil.	Nil.	Nil.	......
Protective works, Irrigation...	......	......	......	......	Nil.	3,00,000	4,00,000	Nil.	Nil.	7,00,000
Total ...	......	......	......	......	62,940	3,12,760	4,14,841	1,23,840	Nil.	9,14,381

55. Under the heads of Forests and Registration, the following figures compare the net revenue in each year with the contract estimate:—

FORESTS.—(*Imperial and Provincial.*)

	Contract estimate.	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Receipts ...	6,28,000	6,94,000	6,94,000	5,72,000	5,97,000	6,54,000
Expenditure ...	3,96,000	3,82,000	3,88,000	4,12,000	3,70,000	4,23,000
Net revenue ...	2,32,000	3,12,000	3,06,000	1,60,000	2,27,000	2,31,000
Provincial share .	1,16,000	1,56,000	1,53,000	80,000	1,13,000	1,16,000

REGISTRATION.—(*Imperial and Provincial.*)

	Contract estimate.	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Receipts ...	9,92,000	10,40,000	9,82,000	10,82,000	10,94,000	10,38,000
Expenditure ..	6,09,000	6,28,000	5,58,000	5,94,000	6,01,000	5,62,000
Net revenue ...	3,83,000	4,12,000	4,24,000	4,88,000	4,93,000	4,76,000
Provincial share ...	1,91,000	2,06,000	2,12,000	2,44,000	2,47,000	2,38,000

56. The *Forest* Department in Bengal is of comparatively little importance from a revenue point of view; and during 1882-87 the depression of trade caused a slackness in the demand for timber, especially for railway sleepers. The operations of the five years resulted in a small aggregate profit of Rs. 38,000. From 1883-84 revenue record-room receipts and charges were transferred from Registration to Land Revenue. These averaged about Rs. 85,000 and Rs. 70,000 a year respectively, so that the net revenue under Registration was really about Rs. 15,000 a year more than appears from the above statement. Allowing for this, it will be seen that the net revenue from this source increased in five years from Rs. 3,83,000 to Rs 4,91,000, or by over 28 per cent., while the profit of the Provincial Government amounted to Rs. 2,22,000 during the whole period of the contract. These satisfactory results were due to the steady introduction of rural in place of official agency, and to the increase of registrations consequent on the passing of the Bengal Tenancy Act.

57. Under the heads of *Law and Justice* (proper) and *Jails* the contract worked very unfavourably for the Local Government. On the receipt side the contract estimate was taken at 9 lakhs and 7 lakhs, respectively, the former including an item of 8 lakhs under the subhead of general fines, fees, and forfeitures, while the latter was almost wholly composed of the sale proceeds of jail manufactures. Under the latter head the estimate was realised, except in 1883-84, when the orders of Lord Ripon's Government restricting jail manufactures reduced the receipts from that source to Rs. 6,38,000. The total receipts from jails in each year were Rs. 8,47,000, Rs. 6,46,000, Rs. 7,29,000, Rs. 7,87,000, and Rs. 7,45,000, against the contract estimate of 7 lakhs. The receipts from fees and fines, however, never came up to the estimate, and the total receipts under Law and Justice (proper) were Rs. 8,23,000, Rs. 7,64,000, Rs. 7,55,000, Rs. 7,41,000, and Rs. 7,56,000, against the contract estimate of 9 lakhs. The net loss on the whole contract was about 4 lakhs of rupees. The expenditure on these two branches of the administration rose from a contract estimate (1881-82) of Rs. 88,33,000 to Rs. 96,19,000 in the last year, and the deficit which had to be made up from other sources was Rs. 4,43,000, Rs. 4,85,000, Rs. 5,76,000, Rs. 9,06,000, and Rs. 7,86,000 in each year since the contract was framed. Valuable reforms were carried out in the

Jail Department, including the reorganisation and complete equipment of the personnel of the superior staff, the development of the Central Jails at Dacca and Midnapore, the establishment of a district jail at Khulna, the introduction of warder guards in place of police, the establishment of a new Juvenile Reformatory at Hazaribagh, and the large development of that at Alipore. These measures cost nearly 1½ lakhs per annum. The rise in the price of food increased the expense of dieting prisoners by an equal sum. though the jail population steadily diminished in numbers. During the five years, the pay of the Subordinate Judicial Service was improved at a cost of about 1½ lakhs a year. Seven Subordinate Judges and 12 munsifs were added to the permanent staff, while numerous temporary officers were appointed. Three additional Judges were temporarily appointed to clear off arrears in the High Court. For the rest, the increase in litigation caused a steady continuous increase in the charges for ministerial establishments, for the service of processes, and for the copying of judicial documents.

58. Under the head of *Police* the contract grant was fixed at Rs. 41,32,000, and the actual expenditure in 1881-82 was Rs. 40,87,000. From the beginning of 1882-83, however, the cost of police in mufassal municipalities was assumed by Government, and a charge of about 4½ lakhs per annum, for which the terms of the contract made no provision, was thus added to the Provincial burdens. There was a set off against this of about one lakh under Medical, and half a lakh under Education, on account of various charges which were simultaneously transferred to Municipal Boards; and the net cost of this reform was about 3 lakhs a year since the beginning of the contract. This was increased by Rs. 61,000 a year from the beginning of 1884-85, when by Act IV (B.C.) of 1884 a similar measure of relief was extended to the Howrah and Suburban Municipalites; which since then paid only Rs. 49,000 a year for police, instead of Rs. 1,10,000 a year as formerly.

59. Under *Marine* the net receipts and charges in each year since 1882-83 were as follows:—

	Contract estimate.	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Gross receipts* ...	11,09,000	10,17,000	9,61,000	8,37,000	9,16,000	9,62,000
Charges ...	10,97,000	9,51,000	8,69,000	8,47,000	8,29,000	8,53,000
Net receipts ...	12,000	66,000	92,000	......	87,000	1,09,000
Net charges ...	......	......	......	10,000	......	......

* Includes in each year a special allotment of Rs. 65,000 for the cost of the *Undaunted*, credited under Land Revenue.

The falling off in receipts was wholly due to the stagnation of trade. In 1881-82, the last year of Sir Ashley Eden's administration, the number of vessels which entered the Port of Calcutta was 1,074, with a total tonnage of 1,808,005, while the number of clearances was 1,058, with a total tonnage of 1,774,084. In both cases the number of vessels and the aggregate tonnage reached the highest figure ever recorded at Calcutta. By 1884-85 the shipping had fallen to 903 entries with a tonnage of 1,729,874, and 923 clearances with a tonnage of 1,745,271, representing the smallest aggregate trade that has visited Calcutta in any year since the opening of the Suez Canal.

Except in respect of pilotage the Bengal Marine Department is of little importance. The only matters of note during the five years 1882-87 were the grant of a subsidy of Rs. 35,000 a year to Messrs. Macneill and Company since 1883-84 for a rapid steamer service between Dhubri and Dibrughar; and a grant of Rs. 10,000 a year to the same firm, for a similar service to Sylhet. In both cases the subsidies were supplementary of similar grants made by the Chief Commissioner of Assam.

60. The expenditure on *Education* was taken in the contract estimates at Rs. 26,77,000. The actual expenditure in each year was Rs. 30,16,000 Rs. 31,55,000, Rs. 34,00,000, Rs. 32,95,000, and Rs. 33,54,000. Up to 1884-85 it was possible to provide annually increasing allotments for this branch of service, but since then the demands of other Departments swallowed up

the scanty increments of the Provincial revenues, and educational expenditure remained stationary. Efforts were, however, made to give effect to the recommendations of the Education Commission. The inspecting staff was strengthened by the appointment of two new Inspectors of Schools, four Joint and Assistant Inspectors, three Deputy Inspectors, and 16 Sub-Inspectors, while the pay of the latter class of officers was raised to Rs. 50 wherever it was less than that sum. These measures were carried out at a cost of Rs. 60,000 a year. The primary grant was gradually raised from 5 lakhs, at which it stood at the close of Sir Ashley Eden's term of office, to 7½ lakhs; while the annual provision for grants-in-aid of schools managed by independent agency was simultaneously raised by upwards of 1½ lakhs. The transfer of police charges to Government enabled Municipal Boards to increase their expenditure on education by upwards of Rs. 60,000 a year. The limited resources at the disposal of Government made it impossible to do much in the way of developing technical education, but it was not altogether neglected. The Engineering College at Sibpur was enlarged and developed, and the School of Art in Calcutta was sedulously encouraged, and made rapid strides in the number of its students and the quality of the instruction imparted.

61. The operation of the contract was more keenly felt in the *Public Works Department* than in any other branch of the public service. The Government of India originally proposed to settle the terms of the contract on the basis of a normal expenditure of 75 lakhs a year for public works of all kinds, including the maintenance, repair, and working expenses of all railways and canals, the construction of new works, and the construction, maintenance and repair of civil roads and buildings, but exclusive of interest charges. Sir Ashley Eden strenuously urged that the grant should not be less than 99 lakhs, the average of the preceding three years, but eventually the offer of the Government of India was accepted with the modification that a lump sum of 15 lakhs, equivalent to 3 lakhs a year, was credited to the Local Government.

62. The following table shows the actual expenditure incurred in each year since 1881-82:—

	1881-82.	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
State Railways (Capital).	11,32,000	18,49,000	8,27,000	1,32,000	51,000	58,000
Subsidised Railways	......	11,000	40,000	58,000	26,000	1,000
Irrigation (Capital)	22,09,000	17,18,000	5,03,000	2,02,000	3,77,000	2,18,000
Civil works ...	66,87,000	66,82,000	45,75,000	27,15,000	27,27,000	38,85,000
Total ...	1,10,28,000	1,02,60,000	59,45,000	31,07,000	31,81,000	41,62,000

63. The dwindling of the grants under every head was most striking. During the first two years of the contract funds were provided, though with difficulty, for the Dinajpur branch of the Northern Bengal State Railway, and for the completion of the Diamond-Harbour branch of the Calcutta and South-Eastern Railway, the whole cost of which was found from Provincial revenues. With the completion of these works, the construction of railways from Provincial funds was entirely suspended, the small sums shown in 1884-85 and subsequent years being merely on account of the Kaunia-Dhurlla State Railway which is a Provincial work. In respect of irrigation works, the course of events was almost precisely similar. No new work of any kind was undertaken during the term of the 1882—87 contract, and it was with the utmost difficulty that funds were provided for the improvement of the Calcutta canals, and the prosecution of the Orissa Coast Canal, both of which works had been undertaken during Sir Ashley Eden's term of office. The Orissa Coast Canal, designed to place Orissa in inland communication with Bengal, and likely to be of the highest value in the event of famine, was begun in 1881. The final opening of the canal was delayed in consequence of unexpected difficulties in locking the Burrabulong river, and of the damage done by the cyclone of September 1885, which also caused the estimates to be exceeded. This work was admittedly *protective* in its nature, and its

importance chiefly consists in the security it is calculated to afford against famine. Yet the only assistance which the Bengal Government received in its construction from the Famine grants consisted of two grants of three and four lakhs respectively, given on the condition that the Imperial Government should share proportionately in the receipts. The whole of the remainder of the cost, which was expected to amount to nearly 40 lakhs, was provided from Provincial Funds, and nearly 20 lakhs of this were found during the currency of the contract.

64. During the first two years of his administration, Sir Rivers Thompson endeavoured to provide for the completion of works in progress and to meet the demand for new works to the full extent of the balance at credit of the Province. The offices of the Bengal Government in Calcutta were completed, court-houses were completed or constructed at Jessore, Mymensingh, Faridpur, Pabna, Gaya, Ranchi, and Darbhanga; jails at Dacca, Midnapore, Buxar, Gaya, Ranchi, Darbhanga, Bogra, Mymensingh and Purulia; the Secretariat offices at Darjeeling since converted into the Deputy Commissioner's Court were begun; numerous sub-divisional court-houses and munsifis were constructed, and a variety of miscellaneons public improvements carried out. By the end of 1883-84, however, the Provincial balances had been reduced to Rs. 6,87,000, and at this juncture the Secretary of State issued orders that they should not ordinarily be allowed to fall below 20 lakhs. The Public Works grant for 1884-85 including Civil Works in charge of Civil Department was therefore restricted to 30 lakhs; and that for 1885-86 was, under pressure of the complications on the North-West frontier, cut down to Rs. 27,85,000.

65. Sir Rivers Thompson's power of making contributions from the Provincial revenues in aid of public objects was greatly circumscribed by financial pressure. The expenditure in no one year exceeded Rs. 3,20,000, and averaged about 2½ lakhs a year; and when it is remembered that nearly 1½ lakhs a year represent compulsory payments of an official nature, the available balance is seen to be exceedingly small. Nevertheless, it was found possible to give grants of Rs. 50,000 each to the municipalities of Burdwan, Bhagalpur, and the Suburbs of Calcutta in aid of local schemes of water-supply; of Rs. 46,000 to the District Road Committee of the 24-Parganas; of Rs. 55,000 to that of Champaran; and of Rs. 20,000 to that of Nadia, for feeder roads; of Rs. 30,000 to the Darjeeling Municipality for the construction of a market, a wire tramway for the removal of rubbish, and other local works; of Rs. 10,000 for the improvement of the town of Chittagong; of Rs. 15,000 for drainage works in Serampore; and of numerous smaller amounts to District Road Committees and Municipal Boards for miscellaneous objects. The Lieutenant-Governor also gave large grants from the balance of the Wahabee Fund for the improvement of the town and district of Patna, including a sum of Rs. 30,000 for a much needed road from the city chowk to the Railway Ferry Ghat, and a grant-in-aid of Rs. 10,000 towards the Anglo-Arabic School established for the special encouragement of Muhammadan education.

66. The following table shows the net financial result of the working of all Provincial *Railways* and *Canals*, whether technically classed as Productive Public Works or not, during each year from 1881-82 to 1886-87.

RAILWAYS.

	1881-82.	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Gross receipts ...	32,70,000	37,88,000	41,24,000	43,10,000*	45,03,000	53,02,000
Working expenses	19,03,000	20,40,000	25,00,000	30,72,000	30,39,000	31,43,000

Net loss ...	......	......	......	4,77,000	4,43,000	......

* From the 1st July 1884, the Calcutta and South-Eastern Railway was resumed by the Imperial Government, and its receipts and charges disappear from the Provincial account. A lump sum of Rs. 22,500 for 1884-85, and of Rs. 30,000 for each succeeding year (credited on this account under Land Revenue) is here added to gross earnings, and the interest charges are also diminished by the amount credited to Provincial on this account.

By the end of 1881-82, when the contract of 1877 came to an end, the total capital expenditure on State Railways in Bengal (exclusive of the East Indian Railway and private lines) amounted to 427 lakhs of rupees, and the mileage of lines open for traffic was 467. Interest, however, was payable only on 336 lakhs, the remainder consisting of Provincial contributions and the capital of the Calcutta and South-Eastern Railway. The principal lines which were then under the control of the Government of Bengal were the Northern Bengal State Railway with an open mileage of 230, the Tirhoot State Railway with 85 miles, the Patna-Gaya with 57 miles, the Calcutta and South-Eastern Railway with 33, and the Kaunia-Dharla (a Provincial railway) with 40. During the five years 1882-87, 19 miles were added to the Northern-Bengal State Railway by the opening of the branch to Dinajpur; the Tirhoot system was practically completed by the construction of branches to Bettiah, Jhinjarpur, and Hajipur, aggregating about 160 miles; a branch of the Calcutta and South-Eastern State Railway was constructed to Diamond Harbour; and an entirely new line, 85 miles in length, was constructed connecting Narainganj, Dacca, and Mymensingh. A swift daily steamer service was started between Narainganj and Goalundo on the Eastern Bengal State Railway, and the chief districts of Eastern Bengal were thus placed in close communication with Calcutta. These works cost 147½ lakhs of rupees, of which upwards of 124 lakhs bore interest at 4 per cent., the remainder having been provided from the Provincial revenues. Seventy-eight lakhs and a half were spent on the Assam-Bihar State Railway, designed to link the Tirhut and Northern Bengal systems, and including the important bridge across the Gunduck to connect the Tirhut line with the Bengal and North-Western Railway. The early part of the contract of 1882-87 witnessed unusual activity in the construction of railways by private agency. Short branch lines were constructed by private bodies and firms connecting Tarkessur with Seoraphuli on the East Indian Railway and Baidyanath with Deoghur and Rohini. The Central Bengal Railway Company constructed lines aggregating 125 miles in length, connecting Ranaghat on the Eastern Bengal State Railway with Bongong and Khulna; and the Bengal and North-Western Company, receiving a guarantee from the Imperial Government, constructed a valuable and most successful railway, 460 miles in length, from the North-Western Provinces to Sonepore on the Ganges opposite Patna.

67. The table given in the last-preceding paragraph shows that while the gross receipts on the State Railways rose from Rs. 32,70,000 to Rs. 53,02,000 (or, excluding the Calcutta and South Eastern Railway, from Rs. 31,10,000 to Rs. 52,72,000), this improvement was accompanied by so heavy an increase of working expenses and interest that the net loss to the Provincial Government during the five years covered by the contract was Rs. 4,65,000. A considerable part of this was due to the locking up of capital on lines not yet open for traffic, or still in their infancy. For instance, close upon 90 lakhs of rupees was spent upon the Assam-Bihar line. The Bengal Government had to pay 4 per cent. per annum on this capital, which of course represented so much dead weight to be carried by the open lines. Similarly, 64 lakhs were spent on the Dacca State Railway, which, though certain to yield a handsome return ultimately, could do little more during the contract than pay its working expenses. For similar reasons part of the capital expended on the Tirhoot State Railway was only partially

productive. But much of the retrogression was undoubtedly due to the stagnation of trade in the years succeeding 1883-84, combined with the failure of the food-grain harvests in parts of Bihar, and of the jute crop in Bengal. The only Provincial railways of importance which were open sufficiently long for a fair comparison are the Northern Bengal, the Patna-Gaya, and the Tirhoot State Railways. The following table shows the capital outlay on each of these lines (both Imperial and Provincial), the gross receipts, working expenses, net earnings, and percentage of earnings to capital, in each year from 1881-82 to 1885-86:—

NORTHERN BENGAL STATE RAILWAY.

	Capital to end of year.	Gross receipts.	Working expenses.	Net earnings.	Percentage of earnings on capital.
	Rs.	Rs.	Rs.	Rs.	
1881-82 ...	2,09,54,000	19,27,000	9,60,000	9,67,000	4·6

1884-85 ...	39,40,000	5,18,000	2,98,000	2,20,000	5·6
1885-86 ...	40,38,000	5,17,000	2,72,000	2,45,000	6

68. The net results of the working of the *canals* under the Bengal Government fluctuated less, chiefly for the reason that deficient rainfall, which tends to contract the traffic on railways, stimulates the demand for water for irrigation purposes. The works managed by the Bengal Government included the Orissa and Midnapore Canals, the Hidgellee Tidal Canal, and the Sone system, which are classed as Productive Public Works; and the Orissa Coast Canal, the Calcutta and Eastern Canals, the Nuddea works, and the Saran and Damoodar Canals, which are not classed as productive.

69. The general financial result of the contract of 1882 may be summarised thus—the revenue, which was estimated at Rs. 3,93,21,000, averaged

Rs. 4,15,52,000, giving an increase of Rs. 22,31,000; the expenditure, which was estimated at Rs. 4,48,53,000, averaged only Rs. 4,26,61,000, being a reduction of Rs. 21,92,000; and the deficit, which averaged Rs. 11,09,000, was met by drawing upon the accumulated balances of the province to the extent of Rs. 55,44,000. The chief branches of revenue which contributed to the increase in receipts were Stamps, Provincial Rates, and Registration; while the reduction in expenditure was almost wholly confined to the Public Works Department, in which the grants for civil works, for capital expenditure on railways and canals, and for irrigation (net charges) were cut down so as not merely to balance the account, but to provide for a large increase of expenditure on Revenue establishments, Judicial Courts, Jails, Police, Education, Superannuations, and the net charges of Provincial State Railways. The contract closed with a credit balance in the Imperial Treasury of only Rs. 19,99,000, which was short by Rs. 1,000 only of the minimum working balance of twenty lakhs which had been prescribed by the Secretary of State.

70. From these figures, and from what has gone before, it may readily be perceived how different was the task imposed on Sir Rivers Thompson from that which fell to the lot of his predecessor. Sir Ashley Eden enjoyed the advantage of a contract, which secured to the province under his control the entire benefit accruing from improved administration, and which in the event yielded financial results surpassing all anticipation. His term of office was favoured with entire immunity from famine and other forms of natural disaster; the commercial torpor then paralysing the industries of the civilized world had not yet spread to India; and a succession of splendid harvests raised the cultivating classes almost into temporary affluence. The ample resources thus unexpectedly brought within his reach he liberally employed in improving many branches of the machinery of Government and in supplying the province with railways, canals, public buildings and other permanent improvements, of which the want had long been admitted. During the five years 1882-87, the financial history of Bengal was altogether different. The contract of 1877 was succeeded by a settlement, which left little scope for the development of the Provincial revenues, and which speedily necessitated a serious contraction in the scale of Provincial expenditure. Trade at last succumbed to the influences which had produced universal stagnation in the commercial world of Europe and America, and its languishing vitality was promptly reflected in many branches of the public exchequer. A scanty and uneven rainfall in three years in succession swallowed up the profits of five years of plenty, and although actual distress was nowhere so acute as to call for the intervention of the State, except on a small and partial scale, in many districts the resources of the poorer classes were wholly exhausted, and no margin whatever left for expenditure on luxuries. It was often difficult to provide adequately for the ordinary requirements of the public service, and it was necessary rather to seek for opportunities of effecting economies than of introducing administrative reforms. The chief measures of Sir Rivers Thompson's Government of Bengal were of the class to which large financial resources are not indispensable. The Bengal Tenancy Act, the prosecution of the Kidderpore Docks for which the capital was found by the Government of India, the grant of an elective constitution to Municipal Boards, the inauguration of self-government in the interior, the introduction of competitive examinations for appointment to the Subordinate Civil Service, the appointment of the Commission for the revision of ministerial salaries, and the re-arrangement of work and authority in district and divisional offices—all these are measures whose importance is mainly economic and political and which leave little trace on the financial history of the time. Nevertheless funds were provided for certain reforms and improvements which the progress of the province had rendered more than ordinarily pressing. The establishment of an Agricultural Department supplied a want to which in other provinces a much higher degree of priority had been attached, and which the revision of the law of landlord and tenant in Bengal had forced into immediate prominence. The increase to the salaries of the Subordinate Executive and Judicial Services improved the prospects of a deserving body of public servants. The appointment of additional judicial officers supplied the means of a swifter, and therefore of a better, administration of justice. The progressive additions to

the grant for primary education kept pace with the downward filtration among the masses of the desire for mental improvement. The Calcutta Exhibition of 1883 84 was instrumental in spreading a wider knowledge of the raw products of India among the manufacturers of Europe, and in acquainting the native population of this country with the capabilities of European machinery. In taking over and carrying on the Iron-works at Barrakur, the Lieutenant-Governor kept alive the embers of an industry which cannot fail to have a great future before it, when the mineral wealth of Chota Nagpur and Central India shall have been adequately exploited. The Orissa Coast Canal was a work of supreme importance for the security of the province of Orissa, and its speedy completion forms the only safeguard against a repetition of the calamity of 1865-66.

Contract of 1887—92.

72. The contract of 1887 between the Government of India and the Government of Bengal was based on arrangements made by the Finance Committee. No material advance in the system of decentralisation was made, but by a redistribution of the shares of the Imperial and Provincial Governments in the three principal heads of Land Revenue, Stamps and Excise, and by certain reductions in expenditure which were considered feasible, a general standard of normal revenue and expenditure was obtained, which was adopted as the "Ruling account." The surplus of this account,

amounting to Rs. 6,89,000, was appropriated by the Government of India through the Land Revenue head, leaving the province with a Revenue and Expenditure exactly equal. Under this arrangement the Government of Bengal was admitted to a quarter share in the land revenue collections, except those from Government estates, whilst under Stamps and Excise its share was changed from one-half to three-fourths and one-fourth respectively. The proportion of charges under Stamps and Excise followed the proportion of receipts. The cost of surveys and settlements and the maintenance of agricultural works and embankments was made entirely Provincial. Refunds and drawbacks followed the proportions assigned for the revenues. The Patna-Gaya State Railway was made Imperial, and the Eastern Bengal State Railway System Provincial, with this reservation that any excess over 30 lakhs in the net revenue from the Eastern Bengal State Railway proper would be credited to Imperial revenues, and that any deficiency below 20 lakhs would be made good by Imperial to Provincial. The interest on funds provided for outlay on State Railways and Irrigation Major Works was borne by the Provincial revenues and calculated on the entire capital outlay, including loss by exchange, from the commencement of operations, but excluding the amount advanced from Provincial revenues during the term of the contract.

The only important change made since the contract was finally settled was the transfer of the management of the Tirhoot State Railway to the Bengal and North-Western Railway Company from 1st July 1890. This change did not, however, materially affect the resources of the Provincial Government, although its accounts were swollen by the inclusion of the receipts and working expenses of the Railway, and the payment of the Company's share of the net receipts from the entire undertaking.

73. The first year of the contract, 1887-88, was a period of comparative prosperity. The receipts under the principal heads of revenue were highly favourable. Railways showed a great advance above the contract estimate, and at the same time there was a large reduction of expenditure in the Civil Department. To a considerable extent this reduction was fictitious, as the savings under the head of Education were adjusted by corresponding grants made to District Boards. But these adjustments were not completed within the year, and while the accounts closed with a small increase of expenditure over the contract assignment of only Rs. 3,90,189, the increase in receipts was Rs. 17,00,256. The net surplus of the year was Rs. 13,10,067 and the closing cash balance Rs. 33,08,991.

74. The year 1888-89 opened accordingly under favourable conditions. But the harvest generally was a poor one, and the elasticity of the revenues which had been marked under several years of prosperity suffered a severe check. For the first time for many years the stamp revenue receded. But the income from railways continued to show a satisfactory increase. It was from this cause mainly that the total receipts of the year were about 6¼ lakhs of rupees more than they were in 1887-88. The expenditure side showed, however, an increase of nearly 26 lakhs. This was largely due to the increased grant for civil works of about 11 lakhs. This grant was made when it was known that the credit opening balance of the year was more than 33 lakhs, and financial prospects in other directions were generally good. The additional grant was urgently required and was very profitably expended. There was an unavoidable increase in expenditure under Railways, under Contributions to District Boards, and an augmented outlay under most heads of general administration. The net financial results of the year were, however, less unsatisfactory than was at one time anticipated. The accounts closed with an increase of expenditure over the contract assignment of Rs. 29,88,922, and an increase in the receipts of Rs. 23,31,003. The net deficit was Rs. 6,57,919, and the closing cash balance was reduced to Rs. 26,51,072.

75. The receipts of the year 1889-90 were generally satisfactory. The principal heads of revenue showed a large increase, of which, however, about 2¼ lakhs were due to special assignments from the Government of India to the Local Government for special works, principally the Orissa Coast and Hijili Tidal Canals which, under the rules in force, are shown under the head of Land Revenue, and a grant of Rs. 1,91,423 was made under the same head for a new pilot brig. A grant of two lakhs was also made to the Provincial Government with effect from that year on account of the cost of the Metropolitan

Police. Stamps, Provincial rates, Assessed taxes, Forests and Registration all showed an increase. The item of Land Revenue proper was augmented by the payment of large arrears of revenue due from the Burdwan Raj estate for the preceding year. The receipts from Railways increased by nearly eight lakhs of rupees. On the other hand, there was a falling off in Excise, and the prospects of the year, which would otherwise have been very favourable, were clouded by bad harvests and distress in Bihar and Orissa. The increase in expenditure under ordinary heads was not more than must be expected under a progressive administration. A larger outlay was necessary to ensure a larger revenue. The increase under Police was principally due to the conversion of the entire cost of the Calcutta and Suburban Police as a Provincial charge with effect from the 1st April 1889, and under Marine to the purchase of the steamer *Guide*. The outlay on Famine Relief was of a special nature. The expenditure on Civil Works was curtailed. The accounts closed with an increase of expenditure over the contract assignment of Rs. 39,62,030, and an increase in the receipts of Rs. 49,87,505. The net surplus of the year was Rs. 10,25,475, and the closing cash balance amounted to Rs. 36,76,547.

76. The financial position of the year 1890-91 was primarily affected by the payment of ten lakhs of rupees, which was transferred under the orders of the Government of India from Provincial to Imperial revenues. This payment was adjusted under the head of Land Revenue. The large increase under Railways was principally due to the inclusion of the gross receipts of the Bengal and North-Western Railway for the last nine months of the year. There was a corresponding increase on the expenditure side, and the net surplus was discounted by a credit for 10½ lakhs taken by the Government of India under the head of Land Revenue on account of the estimated net earnings of the Company for the nine months, from July 1890 to March 1891, which were not paid during the year. A credit for Rs. 3,17,000 was taken under Civil Works, being the estimated value of a portion of land in the Custom House premises made over to the East Indian Railway Company for the extension of their office building. The ordinary heads of revenue showed but little expansion, while the expenditure, on the contrary, showed a tendency to increase under almost all heads. There was a large increase under Land Revenue on account of Surveys and Settlement; under Law and Justice on account of the increase in Civil Courts; under Railways as already explained; and also under Irrigation and Civil Public Works. A special grant of four lakhs was made from Provincial Revenues to the Public Works Department to undertake urgent works, and especially to defray the cost of repairs and maintenance of the roads in the Darjeeling district, which had been much damaged by heavy rains, and to construct new feeder roads to the Railway in Chota Nagpur.

77. For the year 1891-92, the last year of the contract, the total revenue under all heads of account amounted to Rs. 5,78,01,983, which was Rs. 1,13,54,983 in excess of the figures in the contract assignment. But at the same time the expenditure had increased in a still larger proportion, and amounted to Rs. 5,79,21,326 or Rs. 1,14,74,326 in excess of the assignment.

78. The following table shows the receipts under the principal heads of revenue according to the contract assignment, and the receipts under the same heads for 1891-92:—

	Contract assignment. Rs.	Actuals, 1891-92. Rs.	Increase. Rs.
Land Revenue (proper) ...	98,53,000	1,00,21,000	1,68,000
Ditto adjustment ...	(—)6,89,000	+13,81,000	20,70,000
Salt	1,00,000	1,11,000	11,000
Stamps	1,00,87,000	1,13,25,000	12,38,000
Excise	24,82,000	27,83,000	3,01,000
Provincial rates (proper)...	39,20,000	41,60,000	2,40,000
Ditto (recoveries of cess collection charges from District Boards) ...	......	3,65,000	3,65,000
Customs	57,000	57,000	Nil.
Assessed Taxes ...	17,84,000	21,54,000	3,70,000
Forests	3,50,000	3,95,000	45,000
Registration ...	5,38,000	6,67,000	1,29,000
Total ...	2,84,82,000	3,34,19,000	49,37,000

79. The large increase under Land Revenue was due to special assignments from Imperial to Provincial Funds, which are adjusted under this head. The other increases arose from the natural expansiveness of the revenues, especially under the head of Stamps and Assessed Taxes. The increase under Provincial Rates was principally due to a change in procedure under which the cost of collecting the Road and Public Works cesses is adjusted under Provincial Rates, the share debitable to district funds being shown as receipts under the same head. After eliminating adjustments and transfers of account, the real increase credited to the Provincial revenues under principal heads during the last year of the contract came to Rs. 25,02,000.

80. Under Railways there was an extraordinary increase during the same period of from Rs. 1,00,19,000 to Rs. 1,60,40,000, or nearly 60¼ lakhs of rupees, of which nearly half was nominal and due to the inclusion of the receipts of the Bengal North-Western Railway, while the remainder was a real Provincial asset derived from the successful administration of the Eastern Bengal Railway System.

81. A comparative statement of the expenditure under Revenue heads is also shown in detail—

	Contract assignment.	Actuals, 1891-92.
	Rs.	Rs.
Refunds and drawbacks	1,55,000	1,54,000
Assignments and compensation ...	1,68,000	1,66,000
Land Revenue	34,08,000	41,14,000
Salt	11,000	52,000
Stamps	3,75,000	3,39,000
Excise	96,000	1,66,000
Provincial rates	......	4,34,000
Customs	4,97,000	5,19,000
Assessed taxes	85,000	90,000
Forests	2,25,000	2,10,000
Registration	2,95,000	3,42,000
Total ...	53,15,000	65,86,000

82. The increase in round numbers amounted to 12¾ lakhs of rupees. The increase under Land Revenue was principally due to surveys and settlements. The increase of expenditure under Excise was the necessary accompaniment of the important changes which were made in the administration of this Department. The new charge shown under Provincial Rates is a matter of account only, and represents the cost of collecting the cesses in the districts to which the Local Self-Government Act has been extended. The other returns do not seem to call for explanation.

83. The items which compose the major head of Salaries and Expenses of the Civil Department may be compared as follows:—

	Contract assignment.	Actuals. 1891-92.
	Rs.	Rs.
General Administration	15,62,000	16,16,000
Judicial Courts	80,11,000	84,83,000
Jails	17,28,000	20,22,000
Police	47,48,000	59,62,000
Marine	7,81,000	9,42,000
Education	32,46,000	25,52,000
Medical	14,59,000	15,67,000
Political	....	34,000
Scientific and other Minor Departments ...	3,30,000	3,13,000
Total ...	2,18,65,000	2,34,91,000

84. Under some of these heads the increase in expenditure was very large. The increase of nearly 4¾ lakhs under Judicial Courts represents the financial effect of the increase which was found necessary in the number of Subordinate Judges and Munsifs and judicial establishments generally. The increase under Jails was on account of the large outlay on machinery and manufactures, and was in a measure

counterbalanced by a corresponding increase in receipts. The increase in the cost of Police amounts to nearly 12 lakhs of rupees. This was partly due to the cost of the Metropolitan Police, which was provincialised, partly to the large expenditure incurred in connection with subjugation of the South Lushai country and the formation of the South Lushai Hill District, and partly to the improvements effected in the Police Department in consequence of the recommendations made by the Police Commission. The reduction under Education is fictitious only. A great portion of the expenditure under this head has ceased to be departmental, but is incurred by District Boards to which an equivalent grant is made for the purpose under the head of Contributions. A portion of the increase under the head of Medical was due to the establishment of a Sanitary Board.

85. Miscellaneous expenditure increased from Rs. 26,61,000 to Rs. 32,31,000. There was, however, a decrease under Miscellaneous (proper), and the real increase under this heading was due to Superannuation or pensionary charges, which rose from Rs. 12,54,000 to Rs. 16,00,000, and also to increased charges under Stationery and Printing, mainly on account of the census operations.

86. The expenditure on Railways increased from Rs. 87,63,000 to Rs. 1,42,64,000; of this amount the major portion was due to the inclusion of the working expenses of the Bengal and North-Western Railway and the Company's share of net receipts.

87. Irrigation expenditure increased from Rs. 45,69,000 to Rs. 53,32,000. The Interest charge rose from Rs. 22,94,000 to Rs. 24,03,000, and the remainder was due to expenditure on works. A large share of the expenditure on the Orissa Coast and Hidgilee Tidal Canals was contributed by the Government of India and credited under the head of Land Revenue.

88. The increase in expenditure on Civil Works from Rs. 31,14,000 provided in the contract to Rs. 40,25,000 in 1891-92 was unavoidable with reference to the necessities of so large a province.

89. The increase under Contributions from Rs. 1,59,000 to Rs. 8,79,000 was due to the development of Local Self-Government and the assignments it was necessary to make to local bodies in order to maintain an equilibrium between their receipts and the expenditure imposed on them.

H. H. RISLEY,

Secretary to the Government of Bengal.

The 1*st April* 1893.

SURVEY AND SETTLEMENT OF THE GOVERNMENT ESTATE OF BANKI IN CUTTACK.

REVENUE DEPARTMENT—LAND REVENUE.

Calcutta, the 11th April 1893.

RESOLUTION No. 1791.

READ—

Letter No. 180A., dated 21st February 1893, from the Board of Revenue, with enclosures, submitting the final report on the survey and settlement of the Government estate of Banki in Cuttack.

Previous history.

Banki was formerly a Tributary State, the property of the Raja of Banki. The Raja was dethroned in 1839 for misconduct, and his territory was confiscated by Government. From 1839 to 1882 Banki was under the management of the Superintendent of the Tributary Mahals, but in 1882 it was annexed to the Cuttack district, and it has since been treated as a Government estate, and has been managed by a Sub-Deputy Collector. It was settled in 1844 after measurement for ten years, and again after measurement for 14 years from 1854. The period of the second settlement was extended to 1888 in consequence of the Orissa famine of 1866.

Agency employed on survey work.

2. The survey-settlement, which is the subject of the report now submitted, was begun in 1888 and completed in 1891 under Act VIII (B.C.) of 1879. The survey was carried out by a detachment from the Survey of India under Mr. R. B. Smart, Surveyor. An attempt was made to utilize local agency for the field survey and record-writing, and a number of sarbarahkars, or managers of villages, and their relatives were trained in survey schools opened for the purpose at different centres. By these means the sarbarahkars were enabled to understand the operations and to render valuable assistance; but, generally speaking, the work was done by outsiders, the sarbarahkars being found as a class unequal to the task. The settlement was carried out by Babu Balaram Das, Sub-Deputy Collector, who explains that the delay in the completion of the work was due (1) to his being in charge of the estate as Sub-divisional Officer, in which capacity he had the tahsil and criminal case work to attend to; (2) to the failure of the rice crop in 1888-89, and the consequent increase of work in other directions; (3) to difficulties met with in determining the rent of holdings; (4) to the fact that after the preliminary enquiries had been made, and the principles on which the settlement was to be concluded were decided, 5,730 objections were received and had to be disposed of; and (5) to the re-arrangement of the sarbarahkari circles. The draft jamabandi was published in March 1891, when the Settlement Officer ceased to draw the special settlement allowance of Rs. 100 per mensem, though some work still remained to be done, which delayed the submission of the final report. That report is dated 7th April 1892, and did not reach Government till the end of February 1893. The delay occurred chiefly in the office of the Director of Land Records, time being lost in printing the report and the Director being absent on tour and having much other work to engage his attention.

Cost and rental.

3. The total area of the estate is 74,530 acres or 117 square miles. The cost of the operations was Rs. 38,613, or a little more than eight annas an acre. Although this average rate cannot be considered low having regard to the fact that the pay of the Settlement Officer was separately met by Government and that only his special allowance of Rs. 100 per mensem was charged to the settlement, it is very cheap compared with the average rate of cost of the survey and settlement operations lately carried out in the neighbouring estate of Khurda. The gross rental was raised from Rs. 23,866 to Rs. 33,107, and the net revenue from Rs. 21,421 to Rs. 28,820, the increase (Rs. 7,399) being mainly due to the addition of 4,210 acres to the cultivated area, which has increased from 33,000 to 37,210 acres.

Particulars of land.

4. The particulars of the cultivated area are given in the following statement furnished by the Settlement Officer:—

Class of Cultivator.	Number of holdings.	Cultivated area.	Average area per holding.	Rent.	Average rent per acre.
1	2	3	4	5	6

* Chandna rates.

The raiyats are locally divided into three classes, Thani, Pahi, and Chandna, all of whom enjoy occupancy rights. Thani raiyats are cultivators residing in the village, the land of which they till, while a Pahi raiyat is one who holds and cultivates land in a village other than that of his residence. Chandnadars are raiyats who have homestead lands, but no cultivation. In the above statement the term "settled raiyat" has been used by the Settlement Officer apparently as the equivalent of "thani raiyats," whose rights are greater than those of settled raiyats, as defined in the Bengal Tenancy Act, no portion of which, however, had been extended to Orissa before the completion of the settlement of Banki. The total number of holdings is 26,478, or 30,479, including under-raiyats. According to the local custom the under-raiyats cannot ordinarily be ejected from their holdings except by order of the Court. Most of the raiyats under the lakhirajdars and jagirdars pay rent partly in cash and partly in kind, or in some cases in kind only. These produce rents have been recorded by the Settlement Officer. It is stated that the raiyats are eager to commute the grain into money rent, but that the tenure-holders are opposed to the change.

Division and transfer of holdings

5. The Lieutenant-Governor desires that in the case of raiyats holding under Government division of holdings should be forbidden, as in Khurda; and His Honour directs that all transfers should, following the arrangements sanctioned in Government order No. 856L.R., dated 4th March 1892, for that estate, be registered at the head-quarters, and also recorded by the sarbarahkars. His Honour directs that the rights of Government in the dead and fallen trees in their holdings, referred to in paragraph 108 of the report of the Settlement Officer, shall be abandoned in favour of the raiyats.

Mafidars.

6. The class of tenants known as mafidars, who hold homestead lands free of rent, consist chiefly of Sahars, Pans, Sanais and such like who live on the margin of subsistence and from whom the criminal population is chiefly drawn. The Lieutenant-Governor agrees with the Collector that these men should be well looked after and only allowed the privilege of holding land rent-free during good behaviour. The number of such holdings is 730, covering the small area of 93·16 acres.

Uncultivated area and orchards.

7. The uncultivated area amounts to 37,819 acres, of which 11,840 acres are culturable waste. Of the latter area, 4,034 acres are covered by mango orchards, of which only 653 acres were assessed at Rs. 166-10-5. Young orchards or orchards required for public purposes are not assessed. The remainder of the culturable waste (7,805 acres) is not brought under cultivation, chiefly because there are no means of irrigation. As to the unculturable area (25,979 acres), village sites occupy 1,083 acres, and 6,473 acres include hills and forests and other ground open for grazing purposes.

Fisheries.

8. Another source of revenue is the fisheries, which yield Rs. 683-7. The leases granted run for 15 years, and contain clauses providing against the fishermen interfering with the use of water for the irrigation of crops.

Leniency of settlement.

9. It is stated that the settlement is acceptable to the raiyats and sarbarahkars, and that, though some appeals were made to the Collector, not a single suit was instituted to contest the jamabandi. There is no doubt that the settlement is lenient, as may be inferred from the rise in the selling price of raiyati holdings and in the price of food-grains, facts which appear from the following statements extracted from the Settlement Officer's report, showing (1) the average price at which raiyati holdings were sold for 15 years between 1863-64 to 1886-87, and (2) the average price of common rice during the years 1843 and 1874 to 1891:—

1. *Average selling price of raiyati holdings.*

Year.	Average price per mân (which is approximately equal to an acre). Rs. A.	Year.	Average price per mân. Rs. A.
1863-64	11 4	1871-72	39 0
1864-65	20 3	1873-74	52 13
1865 66	25 11	1874-75	48 6
1866-67	24 3	1875-76	60 9
1867-68	33 12	1884-85	50 0
1868-69	25 8	1885-86	80 6
1869-70	29 14	1886-87	88 4
1870-71	31 2		

2. *Average annual price of common rice.*

Year.	Average in seers per rupee. S. CH.	Year.	Average in seers per rupee. S. CH.
1843	58 5	1883	27 2
1874	26 15	1884	18 2
1875	24 8	1885	16 3
1876	27 13	1886	16 8
1877	16 9	1887	18 9
1878	14 4	1888	18 8
1879	15 4	1889	17 3
1880	18 8	1890	24 5
1881	29 8	1891	24 3
1882	30 8		

The statistics in both tables are very remarkable, especially those in the former. It will be seen that the average selling price of raiyati holdings in Banki has risen by 800 per cent. within the last twenty-three years. This rise, moreover, has been virtually continuous, the price receding slightly in years of scarcity and advancing again directly prosperity was restored. No better evidence could be wished for of the steady and growing prosperity of the agri-

cultural population of this estate. The record of average prices commences with 1843, when common rice stood at 58 seers to the rupee. By 1874, communications having meanwhile been improved by the opening of the High Level Canal and the development of the Orissa ports, the price had risen to 26 seers. In 1877—79 the demand occasioned by the Madras famine sent the average price up to rates varying from 14 to 16 seers per rupee. In the period 1881—83 plentiful harvests raised the average to 27—30 seers, while in 1885-86 the cyclone, floods and failure of crops brought it down to 16·8. It now stands at 24·3, which may perhaps be assumed to represent the normal average of the area in ordinary years. The effect of the opening of the East Coast Railway and the extension of the Bengal-Nagpur line will be watched with interest, and will no doubt bring about a further rise of price. It will be observed that the rate of increase in the case of prices falls far short of that obtaining in the case of holdings. The former has risen by 100 per cent. in 50 years; the latter by 800 per cent. in less than half that time.

Crops.

10. The subjoined statement, also taken from the Settlement Officer's report, gives details of the various crops and the extent to which each crop is grown in the estate; but there are no data to show the net gain to cultivators:—

	Area. Acres.	
Food crops—		
Biali paddy	2,228·03	
Sarad paddy	27,259·90	
Dalua paddy	2,753·68	
Brinjals (*solanum melongena*) ...	157·98	
Saru (*colocasia antiquorum*)	42·22	
Sweet potato	2·73	
Pumpkin	21·17	
Cucumber	114·97	
Mung (*phaseolus mungo*)	2,000·32	
Biri (*phaseolus radiatus*)	2,663·03	
Arhar (*cajanus indicus*)	1·30	
Kurthi (*dolichos biflorus*)	2,691·55	
Mandia (*eleusine coracana*)	120·29	
China (*panicum miliaceum*)	3·49	
Kodua (*paspalum scrobiculatum*) ...	166·86	
Vegetables	223·36	
		40,450·88
Non-food crops—		
Sugarcane	245·73	
Tobacco	26 97	
Cotton	132·62	
Castor	92·94	
Mustard	17·38	
Rasi (*Desamum orientale*)	19·05	
Dhania (*Coriandrum sativum*) ...	4·81	
Chilly	0·09	
Saffron	1·56	
Miscellaneous non-food crops ...	0·71	
		541·86
GRAND TOTAL		40,992·74
Deduct area cropped more than once		3,781·78
Net cropped area		37,210·96

Sarbarahkars.

11. The sarbarahkars of Banki hold the same position as those of Khurda, *i.e.*, they are farmers and public accountants, and are responsible for the total demand due to Government, whether they collect from the raiyats or not. They have no rights beyond those conferred on them by their engagements, and are liable to dismissal for misconduct under the orders of the Collector. In making appointments to the post of sarbarahkar, a relative of a deceased or retired sarbarahkar, who has rendered good service, is preferred, provided he be otherwise qualified. Under the orders of the Board of Revenue, the number of the

sarbarahkari circles in the estate has lately been reduced from 143 to 75, and the number of sarbarahkars from 159 to 99. Compensation at the rate of one year's commission was granted to each sarbarahkar whose services were dispensed with. These arrangements are approved generally by the Lieutenant-Governor. The sarbarahkars receive a commission at the rate of from 10 to 20 per cent., and they have been allowed to take the profits of new cultivation for the term of the present settlement, which has been fixed at 15 years, from 1298 to 1312 Amli, or 1891 to 1905. The average amount of the annual commission now drawn by these officers is Rs. 32-8 a year, but 40 of them draw less than Rs. 20, and 47 draw between Rs. 20 and Rs. 50. Of the remainder 8 draw over Rs. 50 and 4 over Rs. 100. Engagements will be taken from those who agree to keep up the settlement records, copies of which have been supplied to them. As regards increase of commission, His Honour is of opinion that the capacity of the sarbarahkar to maintain the records should be clearly proved before any additional percentage is given to him. The Lieutenant-Governor therefore directs that the orders contained in Government letter No. 856L.R., dated 4th March 1892, regarding the inspection of records in Khurda, shall also apply in Banki; and His Honour authorises the grant of a reward of 5 per cent. of his collections to each sarbarahkar found to have kept his records in proper order and up to date each year.

Chaukidars.

12. The question of improving the position of chaukidars will be considered in the Judicial Department of this Government.

13. The Lieutenant-Governor awaits the report promised by the Collector on the proposed establishment of a dispensary in Banki.

14. The Settlement Officer, Babu Balaram Das, deserves commendation for his good work and for the intelligent report which he has submitted. The Lieutenant-Governor sanctions the continuance to him of the special allowance of Rs. 100 a month for six months from the beginning of March 1891. The suggestion of the Director of Land Records that he should be appointed a Deputy Collector will be considered in the Appointment Department of this Office.

ORDER.—Ordered that this Resolution be published in the *Calcutta Gazette*, and that a copy of it be forwarded to the Board of Revenue for information and guidance.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Secretary to the Govt. of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 8th April 1893.

No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.

		Sherpur	...	0·75	
		Naukhila	...	Nil	
	24	Pabna	" 8, '93	1·66	Weather—cloudy and sultry; sometimes stormy with occasional rain. Ploughing and sowing continue. Price of rice at head-quarters 12½ seers per rupee, and at Sirajganj Rs. 8-4 to Rs. 4-12 per maund. Condition of cattle good. Water-supply and fodder sufficient.
	25	Darjeeling	" 8, '93	2·60	A wet week with thick clouds and hail on Friday (7th) afternoon. *In the hills*:—Wheat and barley coming to perfection. *Bhutta* and *kangni*, potatoes, *phafar* and *chhota marua* progressing favourably. *In the terai*.—Lands are being ploughed for jute and *bhadoi* paddy. Prices of coarse rice:— Srs. Hills ... ... 10 } per rupee. Terai ... ... 12 } per rupee.
		Siliguri	...	0·82	
	26	Jalpaiguri	" 8, '93	0·38	Weather—getting hot; nights still fairly cool. Lands continue to be prepared for *bhadoi* and jute. Harvesting of tobacco approaching completion. Price of common rice stationary. No cattle-disease reported. Fodder and water-supply good.

	No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR.				
BHAGALPUR DIVN.	27	Monghyr April 8, '93 Begusarai ... Jamui ...	Nil Nil Nil	Weather—warm days, cool nights. Outturn of *rabi* expected to be 10 annas on the average. Indigo doing well. Small-pox among cattle reported towards Chakai (in Jamui). Plenty of fodder and water. Prices of common rice:— Srs. Sadar ... ... 13 to 15 } Begusarai ... ... 15 } per rupee. Jamui ... ... 13½ }
	28	Bhagalpur " 8, '93 Banka ... Madhipura ... Supaul ...	Nil Nil Nil Nil	Weather—seasonable. Standing crops doing well. *Rabi* harvest in progress. Lands are being prepared for *bhadoi*, and *aghani* paddy is being sown on low lands. Price of common rice 15 seers 2 chitaks per rupee.
	29	Purnea " 8, '93 Kishanganj ... Araria ...	0·61 0·49 0·68	Weather—cloudy and cold for season. *Rabi* harvest nearly over; outturn satisfactory. Late rain did some damage to *rabi*, but benefited *bhadoi* cultivation and jute and paddy seedlings. Fodder and water sufficient. Prices still high but stationary.
	30	Malda " 8, '93 Chanchal ... Shibganj ... Gajole ...	0·20 0·15 0·60 0·07	Weather—days hot; mornings and evenings cool. Reaping of *rabi* crops in full progress; outturn is expected to be not less than 14 annas. *Boro* paddy thriving. Price of common rice 12½ to 15 seers per rupee. Fodder and water ample.
	31	Sonthal Parganas " 6, 93 Deoghur ... Godda ... Jamtara ... Pakur ... Rajmahal ...	0·03 Nil Nil Nil Nil Nil	Weather—hot and dry with west winds; still cool at night. *Mahua* falling; outturn is better than was expected. Mango fruit forming; will not be good. *Chaiti* crops being gathered; outturn fair. Prices as in last week. Fodder and water sufficient.
PATNA DIVISION.	32	Patna " 8, '93	Nil	Weather—clear. Heat increasing. Harvesting of *rabi* has been completed; outturn expected to be good. Opium weighment going on. Castor and banga plants doing well. *Rahar* promises well. Sugarcane and millet being sown. Prices of common rice:— Srs. Sadar ... ... 16 } Barh ... ... 11 to 11½ } per rupee. Dinapore ... ... 15 }
	33	Gaya " 8, '93 Jahanabad ... Nawada ... Aurangabad ...	Nil Nil Nil Nil	Weather—hot with west wind. *Rabi* harvest approaching completion. Opium weighments going on. Mango prospects unfavourable. Common rice sells at 14 to 15 seers per rupee. Water and fodder-supply sufficient.
	34	Shahabad " 8, '93	Nil	Hot weather with strong westerly winds. *Rabi* harvest is practically over, and threshing is in progress. Young sugarcane now requires rain, which would also be beneficial to *kharif* ploughing. Cattle-disease prevalent in the south. Prices show a tendency to fall.
	35	Darbhanga " 8, '93	Nil	Weather—warm with cool mornings. Harvesting of *rabi* continues. Paddy and *mung* being sown. Collection of opium virtually over. Prices remain stationary. Condition of cattle good.
	36	Muzaffarpur " 8, '93	Nil	Weather—seasonable. Harvesting of *rabi* crops continues. Linseed outturn 13 annas. Opium weighment commences on the 10th. No cattle-disease. Water and fodder sufficient.

	No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR—*concld.*				
PATNA DIVISION—*concld.*	37	Saran April, 8, '93 Siwan .. Gopalganj ..	Nil Nil Nil	Weather—days seasonably hot, nights somewhat cooler than usual. East winds. *Rabi* harvesting complete in Siwan, and nearly so in Sadar and Gopalganj subdivisions. Fodder and water sufficient. Prices of common rice:— Srs. c. Chapra ... ... 13 8 } per rupee. Siwan ... ... 13 2 } per rupee. Gopalganj ... ... 13 14 } per rupee.
	38	Champaran „ 8, '93	Nil	Weather—days hot, nights cool. *Rabi* is being gathered and threshed. *Cheena* and paddy are being sown. Indigo thriving. Opium collection finished; weighment has commenced. No marked change in prices. No cattle-disease. Water and fodder sufficient.
ORISSA.				
ORISSA DIVN.	39	Cuttack „ 8, '93	Nil	Weather—warm. Prospects good. Supply of fodder and water sufficient. Price of common rice stationary.
	40	Puri „ 6, '93 Khurda ... Banpur ...	Nil Nil 0·29	Weather—seasonable. Lands are being ploughed for the ensuing *sarad* crop. *Dalua* paddy being harvested. Miscellaneous crops good. Price of rice stationary.
	41	Balasore „ 8, '93	Nil	Weather—normal. Ploughing continues. Rice sells at 15 seers per rupee at Balasore and 17 seers at Bhadrak.
CHOTA NAGPUR.				
South-West Frontier Agency.				
CHOTA NAGPUR DIVN.	42	Hazaribagh April, 8, '93 Giridi ...	Nil Nil	Weather—seasonable. Yield of *rabi* crops 8 to 12 annas. Sugarcane being planted out. Prospects of *mahua* and mango fair. Common rice 11 to 14 seers per rupee. Fodder and water sufficient.
	43	Lohardaga ...	...	Report not received.
	44	Palamau „ 7, '93	Nil	Weather—seasonable. *Rabi* harvest continues. Sugarcane planted out in some parts. Foot-and-mouth disease continues amongst the cattle. Fodder and water sufficient. Prices stationary.
	45	Singhbhum „ 8, '93	0·35	Weather—cool for this season of the year. What crops there are on the ground are doing fairly well. Price of common rice ranges from 12 to 16 seers per rupee. No cattle-disease. Water and fodder plentiful.
	46	Manbhum „ 8, '93 Gobindpur ...	Nil Nil	Weather—bright and warm. *Mohua* crop has been materially benefited by the bright weather. Prospects so far fair. Rice 10 to 13 seers per rupee. Fodder and water-supply ample.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF MARCH 1893.

THE principal features in the meteorology of March 1893 have been—

1. The mean pressure for the month has been in excess of the normal over the whole province, except, perhaps, at Darjeeling. The usual excess has varied from 0·03″ to 0·05″, and it has been fairly equally distributed in all districts, except, perhaps, at the extreme western stations, such as Dehri, Hazaribagh and Ranchi, and at Chittagong, where it has varied from only 0·01″ to 0·02″, and at Darjeeling, where apparently a defect has been registered.

2. The mean temperature for the month has been largely in defect of the normal, the defect usually varying from 4° to 7°. The smallest defects are recorded at the eastern and northern stations, and the largest of 5° and 6° and upwards at the central and western stations. At Silchar and Sibsagar in Assam, indeed, the defect has only equalled from 2° to 3°. The defect generally has been larger in the day than in the night temperatures; for while the mean of the day or maximum temperatures has been usually from 5° to 10° in defect, the average of the night or minimum temperatures has only shown a defect of about 3° to 4°.

3. Humidity and cloud proportion have been very decidedly in excess of the normal for March in all districts of the province.

4. The southerly element in the wind directions, which is generally rather strongly developed in March, has been less prominent than usual in the month under review, and the general wind directions have been westerly to south-westerly, except in the extreme east and north of the province of Bengal and in Assam, where winds have been usually easterly. Indeed, the hot weather system of winds can be scarcely said to have properly established itself in Bengal until about March 20th.

5. The weather in March has been most abnormal, and the hot season conditions did not establish themselves in Bengal even to a moderate extent until about the 20th instant. The weather conditions have also been much more disturbed than usual. Disturbed conditions acccompanied by rain occurred from the 6th to the 8th instant, owing to the passage of a feeble barometric depression from North-Western India in an easterly direction. Disturbed conditions again existed from the 8th or 9th up till about the 17th in connection apparently with certain changes in the pressure distribution, which about this time passed from the cold weather to the hot season system of pressure in Bengal; and again from the 19th to the 23rd a series of hot-weather storms or nor'-westers visited Bengal in connection with a low pressure area which developed to the west of the province, and which gradually drifted across it in an easterly direction. Hence it will be seen that the duration of fine settled weather during March was unusually short, and it was confined to the first four or five days, when ordinary cold season conditions obtained, and to the last week of the month when the conditions were of ordinary settled hot season character.

6. Owing to the very prolonged periods of disturbance the rainfall during March has been unusually heavy, and except in Bihar, where the fall is rather less than an inch, it has varied from about two to four inches. The rainfall for March has hence been very considerably in excess of the normal in all districts, and the number of rainy days has been about twice as large as usual during the month.

The following summary will give a short description of the more important changes which have happened during the month.

During the last week of February a rather influential barometric depression had passed through the province, and in its rear the usual wave of cool air had swept over Bengal, and a steady dry north-westerly air current was blowing during the early part of March, while temperature was in many cases nearly 10° below the normal during the first day or two of the month. This defect of temperature steadily decreased, though weather remained fine up till about the 5th or 6th instant. On the former date, however, a well-defined barometric depression entered North-Western India, moving in an easterly direction, and a secondary depression appeared near Peshawar, and on the 6th an area of low pressure existed between Sutna and Nowgong, while pressure remained relatively low over a large part of Western India. The low pressure areas then apparently moved in an easterly direction slowly filling up in their advance, and though no definite barometric depression could be traced to have passed over Bengal, nevertheless from the 6th to the 9th weather was very disturbed over the province, and very numerous rain showers were reported. The effect of the general rainfall accompanied by the heavily clouded skies was to cause a considerable fall of temperature, which again became very low, the defects being largest at the western stations when they ranged up to 14°. The depression disappeared about the 7th, and on the 8th and 9th of March pressure had been rising in Bengal, and on the latter date it had become in excess of the normal by about a sixth of an inch, and the pressure conditions and distribution were those which usually exist during the cold season, for the highest pressures were registered in the western districts. From this date up to about the 18th, however, these pressure conditions changed steadily. A fairly rapid fall of pressure took place during this period, and by the 18th instant pressure had become decidedly lower in Bihar and Chota Nagpur than in East Bengal, and thus the hot weather distribution of pressure had established itself. Indeed, these conditions were rather more marked than usual, for at Dehri on the 18th pressure was below the normal of the day by 0·16″, while in the east of the province the defect equalled only about half this amount. Accompanying this change in the pressure conditions, there was a steady increase in the temperature, and thus while on the 12th the mean temperature was from 6° to 9° in defect, on the 18th the defect had been reduced to about 2° or 3.° During

these considerable changes also conditions remained somewhat disturbed, and numerous rain showers, frequently accompanied by local storms, occurred, and particularly on the 13th and 14th rainfall was very widely distributed.

The fall of pressure which had occurred up to the 18th was succeeded by somewhat irregular changes on the 19th, and, indeed, these irregular changes of pressure existed over the whole of Northern India, while a feeble area of low pressure was shown in North-West India near the hills. A series of the hot weather local storms called nor'-westers then set in, and fairly general rain was received in all divisions of Bengal except Orissa. On the 20th as the result of the pressure changes which has occurred, a feeble barometric depression appeared over Chota Nagpur, South Bihar, and the neighbouring districts of the North-West Provinces. Again, therefore, conditions continued disturbed, and numerous local storms occurred, and on the 21st the majority of stations, except in Orissa and parts of Bihar, reported rain. On the 21st this low pressure area had advanced slowly in an easterly direction, and a very shallow depression covered the western half of the Provinces. Frequent local storms therefore again occurred, and on the 22nd very numerous rain showers were reported. On the 22nd the shallow depression had again advanced in an easterly direction, and two feeble residual low pressure areas existed—one in Orissa and one in North Bengal and Assam. Disturbed conditions therefore continued in Bengal, local storms occurred in several districts, and on the 23rd rainfall was reported in Orissa and in South-West and East Bengal. On the 23rd, however, a rapid increase of pressure took place, and the low pressure areas disappeared, and from this date fine settled weather of ordinary hot season character set in and continued practically without interruption up to the close of the month.

Pressure.—The variations of pressure during the month have been large. Thus at the beginning of the month it was in excess of the normal by about a tenth of an inch. For the week ending the 11th instant it was in excess of the normal by about 0·12″ or 0·13″. At the close of the following week pressure was largely in defect of the normal, the defect equalling about a sixth of an inch. For the week ending the 25th instant the defect equalled from 0·05″ to 0·07″, and at the close of the month it was in excess of the normal by amounts ranging from 0·02″ in the extreme south-west of the province up to nearly a tenth of an inch at the north-eastern stations. The mean pressure for the whole month has thus been in excess of the normal by from about 0·03″ to 0·05″, the excess being smallest at the extreme western and south-eastern stations. The actual average pressure for the month of April varies from about 29·95″ at Silchar to 29·90″ at Dehri.

Temperature—Has been below the normal throughout practically the whole of March. At the beginning of the month it was from 4° to 6° below the normal. For the week ending the 11th the mean temperature was 4·8° in defect, for the week ending the 18th 5·4° in defect, and for the following week 5° in defect. For the last few days of the month, however, temperature rose decidedly, and on the 31st the defect was not much larger than 3° to 5°. Hence for the whole month the mean temperature for all Bengal has been 5·2° in defect of the normal, while in Assam the defect has only equalled 3·3°. The largest defects, indeed, have been registered in the western divisions, where Chota Nagpur shows a defect of 7·1°, and South Bihar and South-West Bengal defects of nearly 6°, and on the other hand the defect in East Bengal is only 4·1°. The averages of the maximum temperatures for the month show defects ranging from about 10° at Ranchi and Chaibassa to from 2° to 4° at Sibsagar, Silchar, Noakhali, Barisal, and Chittagong, and the minimum temperatures of the province have been in defect by from 5° at Gaya and Saugor Island to about 2° in North-East Bengal.

The following table shows the variation of temperature from the normal week by week for the month at nine typical stations in different districts of the province, and from this table it will also be seen that the largest defects have been recorded in the maximum or day temperatures. The figures, indeed, in this table represent a most extraordinary deficiency from the normal condition of things in March :—

Rainfall.—An average fall of three-and-a-half inches has occurred in East Bengal, of two to three inches in South-West Bengal and Orissa, of nearly two inches in Chota Nagpur and North Bengal, and of nearly an inch in Bihar. The actual falls in these divisions in March represent the following percentages of the normal falls—Orissa 238 per cent., Chota Nagpur 225 per cent., South Bihar 188 per cent., South-West Bengal 160 per cent., North Bengal 145 per cent., North Bihar 132 per cent., and East Bengal 123 per cent. The number of rainy days in March has also been generally about twice as large as usual.

Notwithstanding the general heaviness of the falls and the general excess above the normal, the falls in March have been smaller than the normal amounts in the districts of Rangpur, Darjeeling, Chittagong, Chittagong Hill Tracts, Darbhanga, Muzaffarpur, and Champaran, while in the districts of Malda, Dinajpur, Bhagalpur, Gaya, Patna, and Monghyr the falls have been only about normal in amount.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the month of March 1893 :—

Meteorological Divisions.	Temperature.						Rainfall.							
	Highest observed during month.	Lowest observed during month.	Averages for month.			Average mean of month above or below normal mean of month.	Of month.			Rainy days.			Since 16th Oct. 1892.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in month.	Normal average number in month.	Variation.	Average.	Normal average.

METEOROLOGICAL OFFICE, BENGAL ;
The 10*th April* 1893.

A. PEDLER,
Meteorological Reporter to the Govt. of Bengal.

Abstract of the results of Meteorological Observations taken at the Alipore Observatory in the month of March 1893.

	Inches.	Date.	Hour.
The mean pressure of the month	29·895		
The average pressure of March from 24 years' registers ...	29·869		
The highest pressure in the month	30·156	9th	10
The lowest pressure in the month	29·661	20th	4
The range of pressure	0·495		
	Hours.		
The total number of hours of bright sunshine during the month	230·9		
The maximum possible number of hours of sunshine ...	371·3		
	⊖		
The mean temperature of the month	74·5		
The average temperature of March from 24 years' registers ...	80·6		
The highest temperature in the month	92·8	28th.	
The lowest temperature in the month	57·5	2nd.	
The range of temperature during the month	35·3		
The mean daily range of temperature	18·6		
The greatest range of temperature in one day	25·2	25th & 31st.	
	Per cent.		
The mean humidity of the month	75		
The average humidity of March from 24 years' registers ...	66		
	Inches.		
The mean vapour tension of the month	0·629		
The average vapour tension of March from 9 years' registers ...	0·702		
The mean cloud proportion of the month	3·79		
The average cloud proportion of March from 16 years' registers ...	2·55		
The total rainfall of the month	1·85		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	1·80		
The average fall of March from 48 years' registers ...	1·34		
The greatest fall in 24 hours	0·72	21st.	
	Days.		
The number of rainy days in the month	7		
The average number of rainy days in March from 24 years' registers	4		
	⊖		
The mean maximum equilibrium temperature of solar radiation during the month	139·0		
The mean difference of sun and air temperatures	54·8		
The greatest sun temperature	147·1	31st.	
The greatest excess of sun over air temperature	62·5	12th.	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	60·8		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	5·0		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	7·6	27th.	
	Miles.		
The mean movement of the wind per day	68·1		
The greatest movement of the wind in one day	198·0	21st.	
The greatest movement of the wind in one hour	18·0	19th, 7 to 8 P.M.	

The number of hours with winds from each of the 8 points—

N. 38, N.E. 33, E. 21, S.E. 23, S. 122, S.W. 144, W. 85, N.W. 48, Calm 230.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park Street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore ·003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 1·0 lower; and, finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0·6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

C. Little,
For Meteorological Reporter to the Govt. of India.

Meteorological Office, India;
Calcutta, the 10th April 1893.

Meteorological Report of the Province of Bengal

* Mean of 6 days.

Explanation.—*Summary.*—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 01 rainfall the normal mean are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station district, *i.e.*, from total rainfall at the subdivisional stations in the district sending in returns divided by the number of stations. A rainy day is one of

for the week ending Saturday, the 8th of April 1893.

Variation from normal mean.	Mean 8 A.M. temperature.	Average humidity at 8 A.M.	Average cloud amount at 8 A.M.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS.											DISTRICT.

Explanation.—... indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the* 11*th April* 1893.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 8TH OF APRIL 1893.

At the close of the previous week conditions were fairly normal for the hot season, except that temperature was decidedly lower than usual, and that there was a feeble tendency to disturbance over the south-west of the province in connection with a feeble low pressure area. On the 2nd of April, or the first day of the present week, the changes of meteorological conditions were small, and at the majority of stations there had been a slight fall of pressure only, while the feeble depression over Lower Bengal had disappeared and weather was fine over practically the whole province. In North-Western India, over the Punjab, however, there was still a distinct low pressure area, which was giving rise to decidedly disturbed weather. On the 3rd of April again the changes in Bengal were small, and pressure was generally rising slowly. Weather therefore continued fair in Bengal, but on this day a barometric depression was shown over part of the North-West Provinces, and the disturbed weather in connection with it had advanced in an easterly direction. On the 4th instant pressure was falling rapidly in Bihar, and moderately over the remainder of the province, and the low pressure area existed on this day over Bihar and the east of the North-West Provinces, while on the 5th, it had again advanced eastward over Bengal, though on the 6th it had filled up and disappeared. Hence the disturbed conditions accompanying the depression again advanced in an easterly direction, and numerous local storms or nor'-westers, usually accompanied by rain, occurred in Bengal, and on the 4th and 5th, and in some districts on the 6th also, numerous stations reported rain, the rainfall being largest in amount in North and East Bengal and in comparatively small amount in South-West Bengal and North Bihar. On the 7th the pressure changes in Bengal were small, and though the barometer had usually fallen, pressure was still in excess of the normal by moderate amounts. The barometric depression having however disappeared, weather had again become fine over the greater part of the province and the local storms practically ceased, except in and near the hills. On the 8th a slow to moderate fall of pressure had taken place in the west of the province, but the general condition remained unchanged, and weather continued fine over the greater part of the province except in and near the hills, where conditions were again decidedly disturbed. Winds have to a great extent remained unchanged during the week, and over the western and south-western districts they have been westerly and south-westerly and at the eastern and northern stations they have been south-easterly and easterly. The usual strengthening of the southerly winds blowing at the head of the Bay noticeable in the hot season has taken place and rather strong southerly winds have been generally reported, particularly in the second half of the week.

Pressure.—The mean pressure for the week has been in rather large excess of the normal. The general excess over the province has been from 0·07" to 0·09", but comparatively small excess pressures of about 0·05" are reported in Chota Nagpur, while in parts of North Bengal the excess has equalled a tenth of an inch.

Temperature.—The general temperature for the week has again been in defect of the normal, the defect for the whole province equalling 1·5°. During the week, however, there has been a considerable increase in the temperature, and the defects at the close of the week were much smaller than they had been for some time. Indeed on the first day of the week the mean temperature of the province was from about 2° to 4°, or 5° below the normal, while on the 8th the defect generally equalled from 1° to 2° only, and in certain parts of Chota Nagpur, Bihar, and North Bengal temperature was even in slight excess of the normal.

The distribution of temperature for the week and its variation from the normal value are best seen in the table below, where the average maximum, minimum and mean temperatures for the week at nine typical stations in different districts of the province are compared with the normal values for the period. It will be seen that the principal defects from the normal have again occurred in the maximum or day temperatures :—

Table showing the excess or defect of the actual mean temperature from the normal for the week ending 8th April 1893.

	Normal mean maximum temperature for the week ending 8th April.	Actual mean maximum temperature for the week ending 8th April 1893.	Variation of actual mean from the normal.	Normal mean minimum temperature for the week ending 8th April.	Actual mean minimum temperature for the week ending 8th April 1893.	Variation of actual mean from the normal.	Normal mean daily temperature for the week ending 8th April.	Actual mean daily temperature for the week ending 8th April 1893.	Variation of actual mean from the normal.

Rainfall.—A general fall of about one inch has occurred in North Bengal, or nearly four times as much as usual. A fall of nearly half an inch is reported in East Bengal, or practically a normal amount, and a fall of about a third of an inch in South-West Bengal, or again practically a normal fall. In North Bihar the fall has equalled only a tenth of an inch, and the remainder of the province has been nearly rainless. In North Bengal the heaviest falls are reported from the districts of Kuch Bihar, Darjiling and Rangpur; in South-West Bengal the heaviest falls have been in the Nadia and Khulna districts, while moderately heavy falls have occurred also in the following districts:—Jessore, Pabna, Backergange, Faridpur, and Purnea.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 8th of April 1893:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 1st April 1893.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week.	Variation.	Average.	Normal average.	Average.	Normal average.

The total fall from 1st January to 8th April 1893	6·85
The average fall of the corresponding period for 24 years, S.-G.'s Office ...	3·20

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h, 10h, 16h and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

⌒, dew; ═, fog; t, thunder.

C. Little,

For Meteorological Reporter to the Gort. of India.

* Includes 5,747 tons and 3,247 tons of coal during 1893 and 1892, respectively, carried for Revenue, for which no "Up" and "Down" register maintained.

† Railway plant and rolling-stock, 9,492 tons and 5,050 tons for the years 1893 and 1892, respectively, for which no "Up" and "Down" register maintained.

Comparative Statement of principal commodities carried on the Eastern Bengal State Railway during the month of January 1893.

INCREASES.

	Tons.
Coal	3,794
For railway and Flotilla consumption and for brick burning..	
Jute, screwed	7,176
The principal increase was in despatches from Haldibari, Rangpur and Jalpaiguri.	
Jute, unscrewed	3,974
Mymensingh, Rangpur, Forbesganj, Domar, Jalpaiguri and other stations on the Northern Section show increases under this head. The crop of 1892 was larger than that of 1891.	

	Tons.
Kerosine oil	4,694
Due to the prohibition of carriage by boats within certain limits of the port of Calcutta.	
Railway plant and rolling-stock	4,442
Due to construction of connected railways.	

DECREASES.

	Tons.
Cotton twist and yarn } ,, piece-goods }	538
Ordinary fluctuation.	
Rice	6,042
The chief decrease was in despatches from Jaypurhat, Nowabganj and Hilli. Local stocks were low.	

	Tons.
Oil-seeds	1,808
Due to short crops.	
Salt	654
Mostly in the upward despatches from Chitpore.	

JAMES SHAW,
for Examiner of Accounts.

* Includes 509 tons and 419 tons of coal during 1893 and 1892 respectively carried for Revenue, for which no "Up" and "Down" register maintained.

† Railway plant and rolling-stock 150 tons and 539 tons for the years 1893 and 1892, respectively, for which no "Up" and "Down" register maintained.

Comparative Statement of principal commodities carried on the Bengal Central Railway during the month of January 1893.

INCREASES.

	Tons.
Coal	599

For brick burning.

Betel-nuts	230

Nearly the whole of the increase was contributed by the Bengal Central Flotilla stations *viâ* Khulna.

Sugar	140

Jhikargacha contributed about 14,000 maunds, or nearly one-half of the increase.

DECREASES.

	Tons.
Rice	1,163

The principal decrease was in despatches from Khulna station. Prices were not sufficiently high to induce dealers to choose the quicker mode of transit by rail.

JAMES SHAW,
for Examiner of Accounts.

LANGUAGE AND CHARACTER TO BE USED IN COURTS AND OFFICES IN BIHAR.

GENERAL DEPARTMENT—MISCELLANEOUS No. 1178.

Calcutta, the 24th March 1893.

RESOLUTION.

READ AGAIN—

This Government's Resolution No. 1079, dated the 12th April 1892, regarding the language and character to be used in the Courts and Offices in Bihar.

Read also the following letters on the same subject:—

Letter from the Secretary to the Bihar Landholders' Association, No. 3, dated the 25th May 1892, and its enclosure.

Letter from the Honorary Secretary to the Central National Muhammadan Association, No. 216, dated the 13th June 1892.

Letter from the Honorary Secretary to the Bhagalpur Landholders' Association, No. 6, dated the 13th June 1892.

Letter from the Secretary, British Indian Association, dated the 6th July 1892.

Letter from the Commissioner of the Bhagalpur Division, No. 1196J., dated the 30th June 1892.

Letter from the Commissioner of the Patna Division, No. 634G., dated the 11th August 1892, and its enclosure.

Letter from the Registrar of the High Court, Calcutta, No. 2276, dated the 27th August 1892.

Letter from the Secretary to the Board of Revenue, Lower Provinces, No. 858A. dated the 22nd September 1892, and its enclosure.

Letter from the Secretary to the Board of Revenue, No. 823B., dated the 24th October 1892, and its enclosure.

Letters Nos. 311-313T.G., dated 26th October 1892, and 118-123, dated 14th January 1893, to the District and Sessions Judges in the Patna and Bhagalpur Divisions, and the Judicial Commissioner of Chota Nagpur, and their replies.

Letters Nos. 314-316T.G., dated 26th October 1892, to the Commissioners of Patna, Bhagalpur, and Chota Nagpur, and their replies.

In the Resolution cited in the preamble, the Lieutenant-Governor discussed the merits of the several proposals submitted to Government on the subject of the language and character to be used in Bihar, and arrived at the conclusion that Kaithi, as the character in use in the Courts, is slow in writing and illegible when written, and that Government might properly substitute the Roman character for Kaithi as far as registers and records are concerned, but that such documents as summonses and proclamations, &c., which are issued to the public, should be in Kaithi. Before, however, passing final orders on the point, the several officers and associations named in the preamble were requested to favour His Honour with an expression of their views on the following questions:—

(1) Whether the Roman character can be substituted for Kaithi in all registers and office records, or whether any exception should be made?

(2) What papers, other than summonses and proclamations, are required by the public to be in the Kaithi character?

(3) Whether, when the depositions of witnesses are not recorded by the presiding officer himself in English, it is desirable that they should be recorded in the Kaithi, the Roman, or the Persian character.

2. After consideration of the replies received from the officers and associations consulted, the Lieutenant-Governor has decided that there should be no change in regard to the use of the Hindi language in Bihar, and no resumption of the use of the Persian character, and that the following orders on the points above referred to may properly be issued:—

(1) The headings of all registers kept up in the Courts and Offices in Bihar are to be bi-lingual, in English and in Roman-Hindi. Entries of words in those registers and in all other office records are to be in English, if the clerk knows English, and in Hindi words and Roman character if he does not know English. If any clerk in charge of a register does not know the English (Roman) character, and is unable to learn it by the time the new registers are issued from the Stationery Office, he will be allowed to prepare a flap for his own use, writen in Nagri, and to paste it on to the register. He will also be allowed to make verbal entries in Nagri. In future no clerks are to be appointed who do not know English. Figures are invariably to be written in English (*i.e.*, Arabic) numerals.

(2)(*a*) All summonses, proclamations, notices, notifications, &c., and in fact all original documents (*i.e.*, not copies) issuing direct from the Courts and Offices to the public, and not passing through the hands of revenue agents or mukhtars, are to be in the Nagri character, whether printed or written, or partly printed and partly written.

(*b*) Copies issuing from the Courts and Offices must necessarily be written in the character as well as in the language of the original documents of which they are copies.

(*c*) Plaints, mukhtarnamas, petitions, &c., addressed to the Courts and Offices may be presented by an applicant or complainant in holograph, *i.e.*, written entirely by himself in any language which he best understands; but, if presented through a revenue agent or mukhtar, they are to be written in the Nagri character, as Hindi is the language of the Courts.

(3) When the presiding officer in Revenue and Criminal Courts does not record depositions in English, he is to record them in whichever character he knows best—Nagri or Persian—the former rather than the latter if he knows both.

3. It will be observed that, in accordance with the views expressed by the British Indian Association and others, it has been decided to adopt the Nagri character instead of Kaithi, as being more easily written and more legible than Kaithi. Printed Nagri is legible to every one who can read printed Kaithi.

4. So far as the Civil Courts are concerned, these orders are to apply to all documents except depositions.

5. These orders will entail considerable alterations in the forms now in use, but before substituting the revised forms the old stock of forms should first be exhausted.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Secretary to the Government of Bengal.

IRRIGATION OPERATIONS FOR KHARIF, 1892-93.

No. 484*I*.

GOVERNMENT OF BENGAL—PUBLIC WORKS DEPARTMENT.

Irrigation.

Dated Calcutta, the 18th April 1893.

RESOLUTION.

READ—

Statements Nos. I, II and III of Irrigation Operations of Canals in Bengal during the kharif season of 1892-93.

OBSERVATIONS.—The area irrigated during the kharif season of 1892-93, was 597,985 acres, against 552,282 acres, showing an increase of 8·2 per cent., the increase taking place mainly on the Eden Canal, which has supplied an unusually large area of land in the districts of Burdwan and Hooghly with water.

2. The rainfall on the Orissa and Midnapore Canals was less, and that on the Sone and Saran Canals was more than last year.

3. The increase or decrease in the irrigation from each canal is given in the following statement:—

Canals.		Kharif season.		More.	Less.
		1891-92.	1892-93.		
		Acres.	Acres.	Acres.	Acres.
Orissa ...	Taldunda ...	41,570	34,379	......	7,191
	Kendrapara ...	70,686	67,008	......	3,678
	High Level, Ranges I, II and III.	61,486	55,783	......	5,703
Midnapore Canal		83,905	88,008	4,103	......
Eden "		14,069	77,203	63,134	......
Sone ...	Patna	75,037	67,351	......	7,686
	Arrah	1,29,691	1,23,002	......	6,689
	Buxar	72,413	83,820	11,407	......
Saran Canal		3,425	1,431	......	1,994
Total ...		5,52,282	5,97,985	78,644	32,941

On the Midnapore, Saran, and Eden Canals the only kharif crop irrigated is rice, whilst on the Orissa and Sone Canals there are, in addition, sugarcane and hot-weather crops.

ORDER.—Ordered that a copy of this Resolution and of the statements Nos. I, II, and III, be submitted to the Government of India, Public Works Department, for information.

Order also that copies of this Resolution and of the statements be forwarded to the Commissioners of the Orissa, Burdwan and the Patna Divisions; the Collectors of Cuttack, Midnapore, Patna, Shahabad, Gaya and Saran; the Superintending Engineers, Orissa, South-Western and Sone Circles; and the Examiner of Public Works Accounts, Bengal, for information.

By order of the Lieutenant-Governor of Bengal,

C. W. ODLING,

Secretary to the Government of Bengal.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period
The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 01
rainfall the normal mean are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station
district, *viz.*, from total rainfall at the subdivisional stations in the district sending in returns divided by the number of stations. A rainy day is one of

for the week ending Saturday, the 15th of April 1893.

					DISTRICT OBSERVATIONS.										
					Of week.				Rainfall.						
									Since 1st of month.			Since 1st April 1893.			
Variation from normal mean.	Mean 8 A.M. temperature.	Average humidity at 8 A.M.	Average cloud amount at 8 A.M.	Rainfall of week at observing station.	Mean for district.	Normal mean.	Average number of rainy days.	Normal number of rainy days.	Mean for district.	Normal mean.	Variation.	Mean for district.	Normal mean.	Variation.	District.

for the last ten years. The variations are *negative* when the mean for the week is less than the corresponding normal mean, and *positive* when greater. The numbers denoting cloud amount represents the part of the sky covered the whole sky being denoted by 10. Under the head District observations of for the period in question during the past ten years. The means of the district are the numerical average of the rainfall returned received in the which at least a tenth of an inch fell.

Statement of Rainfall in Bengal for the week ending Saturday (8 a.m.), the 15th of April 1893.

Meteorological Division.	District.	Station.	RAINFALL. Sunday, 9th.	Monday, 10th.	Tuesday, 11th.	Wednesday, 12th.	Thursday, 13th.	Friday, 14th.	Saturday, 15th.	Total number of rainy days.	Rainfall of week.	Average rainfall of week.	Total rainfall since 1st of month.	Average total rainfall from 1st of month.	Total rainfall since 1st April 1893.	Average rainfall from 1st April to date.

Explanation.—.. indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the 18th April 1893.*

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 15TH OF APRIL 1893.

AT the close of the previous week weather conditions were fairly settled in Bengal, except for the fact that an area of low pressure was passing apparently through the hills to the north of the province, and also for the fact that an area of relatively low pressure existed over the Gangetic plain, the centre of the low pressure being represented by such stations as Lucknow, Allahabad, Sutna, and Nowgong. The low pressure passing through the hills caused a series of severe local storms on the Saturday evening, and Dhubri, Kurseong, Darjiling, Gnatong, etc., reported severe storms with hail and rain. The changes which occurred on Sunday the 9th were generally small, and pressure was rising moderately to slowly at all except a few western and south-western stations. The latter fact was caused by the drifting of the low pressure area in an easterly direction, and its centre was on this day near Hazaribagh. Hence with the advance of the depression over the western districts of Bengal, conditions became decidedly disturbed. A very rapid increase of pressure took place on the 10th, but still pressure remained relatively low over South-West and West Bengal, and the disturbed conditions thus continued, and on those two days numerous local storms with rain occurred in South-West, North and East Bengal, which rainfall was reported on the mornings of the 10th and 11th. Pressure continued to rise over a considerable part of the province on the 11th, and the area of low pressure quite disappeared or had perhaps drifted over Burma, and weather again became fine in Bengal, and from the 11th to the close of the week ordinary hot season conditions obtained, and no rain fell except on the 14th and 15th in and near the hills, where a few showers were reported. During this period pressure fell on the 12th, 13th, 14th and 15th, and from being moderately in excess of the normal at the beginning of the week, it had become in slight to moderate defect at its close, the defect ranging up to a twentieth of an inch at Gaya and Dehri, though slight excess pressures were still reported in North-East Bengal. In the case of temperature also there has been a general increase during the week, and on the 15th about half the stations reported temperatures in excess of the normal and the other half slight defects Winds also almost throughout the week have varied from south-westerly at the western and south-western stations, though south-easterly at the eastern stations, to easterly in the north of the province. Indeed the conditions generally during the week have been of ordinary hot weather character, and the changes which have occurred have been to make these conditions more pronounced.

Pressure.—Owing to the excessive pressure in the earlier part of the week the mean pressure has been largely in excess of the normal. This excess varies usually from 0·07″ to about 0·12″, and is largest in the north-east of the province, where it averages about 0·13″, and smallest at Hazaribagh and Ranchi, where it equals 0·05″.

Temperature.—The mean temperature of the province for the week has again been below the normal, the defect averaging 1·6°, while defects of from 2° to 3° are recorded in Orissa, South-West, North and East Bengal. The distribution of temperature for the week and its variation from the normal value are best seen in the table below, where the average maximum, minimum and mean temperatures for the week at nine typical stations in different districts of the province are compared with the normal values for the period. It will be seen, as in previous weeks, that the principal defects from the normal have occurred in the maximum or day temperatures:—

Table showing the excess or defect of the actual mean temperature from the normal for the week ending 15th April 1893.

	Normal mean maximum temperature for the week ending 15th April.	Actual mean maximum temperature for the week ending 15th April 1893.	Variation of actual mean from the normal.	Normal mean minimum temperature for the week ending 15th April.	Actual mean minimum temperature for the week ending 15th April 1893.	Variation of actual mean from the normal.	Normal mean daily temperature for the week ending 15th April.	Actual mean daily temperature for the week ending 15th April 1893.	Variation of actual mean from the normal.

Darjeeling	61·1	59·1	−2·0	46·9	46·4	−0·5	54·0	52·8	−1·2

Rainfall.—The rainfall during the week has not been large. It has averaged about half an inch in South-West, North and East Bengal, but in the other districts the falls have been so small that they are quite unimportant. The falls in South-West and North Bengal are indeed a little above the normal value for the period, but elsewhere the falls have been in defect.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 15th of April 1893 :—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 1st April 1893.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h, 10h, 16h and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a tl atched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

t, thunder; <, lightning; △, dew.

RESOLUTION ON THE REPORT ON THE LUNATIC ASYLUMS IN BENGAL FOR THE YEAR 1892.

MUNICIPAL DEPARTMENT—MEDICAL.

No. 1487Med.

Calcutta, the 20th April 1893.

RESOLUTION.

READ—

The Report on the Lunatic Asylums in Bengal for the year 1892.

Read again—

The Report for the year 1891 and the Resolution recorded upon it.

There was a slight decrease in the population of the five Native Asylums in the year under review. The number of persons under detention on the 1st January 1892 was 963. During the year 158 persons were admitted and 28 re-admitted, giving a total of 1,149 treated against 1,234, the figures of the previous year. The discharges (cured and otherwise) were 71 and 43 respectively, and 84 patients died, leaving 951 persons in confinement at the close of the year against 963 persons at the close of 1891. The number of criminal lunatics in confinement at the close of the year was the same as in the previous year, the decrease of 12 in the total population occurring in the non-criminal class.

2. The number of admissions and re-admissions fell from 213 in the previous year to 186. Of this number, 98 were criminals and 88 non-criminals,

against 91 criminals and 122 non-criminals in 1891. The Lieutenant-Governor is glad to observe this decrease in the admissions of non-criminals, which is attributed to the instructions contained in Government Circular No. 42, dated the 3rd December 1891, prescribing the exercise of greater discrimination in admitting patients to a lunatic asylum. While a falling off of 39 is shown in the number of admissions, it is remarkable that the number of re-admissions, which increased by 12, should be the highest recorded during the last ten years for which figures are given in the report. In last year's Resolution it was observed that the increase in the number of persons discharged was remarkable and its cause a little obscure, and the Inspector-General should now inquire whether the increase in the number of re-admissions in 1892, for which no explanation has been offered, may not to some extent be due to premature discharges in the previous year.

3. The Inspector-General of Civil Hospitals observes that the criminal population was in excess of that in any of the previous nine years, except 1890 and 1891, and seems inclined to think that the increase may be due to the effect of the rules for the treatment of recovered criminal lunatics confined in asylums and for their discharge, issued with Government Resolution of 21st August 1888, which, in his opinion, cause the detention of a larger proportion of these lunatics than heretofore. The Lieutenant-Governor is unable to concur in this opinion, which is opposed to the view taken last year, when part of the decrease in the number of criminal lunatics in 1891 was ascribed to the effect of those rules. The table of criminal lunatics given in the report shows that, with the exception of 1887, when there was a slight decrease, there has been a continuous increase in the number remaining under confinement at the close of each year up to 1890, and that since then there has been a decrease. It is therefore obvious that the causes of the increase must be some other than the rules of 1888.

4. During the year under review, the only asylum at which the total number of inmates at any time exceeded the capacity was that at Dacca, but the overcrowding was slight and no inconvenience was felt, nor was the health of the inmates affected. The extension of the Asylum at Berhampore will, when completed, largely increase the capacity for patients, and be the means of affording relief to other asylums which may be overcrowded.

5. In Statement No. VII, the causes of insanity in 53 out of the total of 186 admissions in 1892 are stated to be ganja-smoking and the use of bhang against 54 in 1891. The Lieutenant-Governor desires that the Inspector-General of Civil Hospitals, when inspecting the asylums, will enquire into some of the cases attributed to ganja-smoking, and ascertain upon what data this diagnosis is based. It is to be observed that in Statement No. VI only 40 of the admissions are shown to belong to the types of insanity caused by ganja-smoking and the use of bhang. The suggestion has been made that it is as reasonable to suppose that excessive ganja-smoking may be due to insanity, as that insanity may be due to excessive use of ganja.

6. The number of admissions into hospital was 595 against 717 in 1891. These figures indicate a less severe incidence of sickness in the asylums taken together, although at Dallanda and Patna there were more admissions into hospital than in the previous year. The increase at Dallanda is attributed to the occurrence of chicken-pox and to several cases of pneumonia which were absent in 1891, and to the prevalence of bowel-complaints to a greater extent than in the year before. There were 29 cases of chicken-pox and 10 of pneumonia, while the admissions for bowel-complaints were 22 against 7 in 1891. At Patna the increase is said to be due to fever and dysentery, and to disorders which these diseases leave in their train. As the jail population at Patna and Alipore suffered similarly in 1892 from bowel-complaints, pneumonia, and other disorders, it is inferred that the incidence of sickness in the Dallanda and Patna Asylums must be ascribed to general rather than to local influences. It is remarkable that, notwithstanding the outbreak of cholera in the jail at every station where an asylum is situated except Cuttack, the disease did not appear among the lunatics. There were 84 deaths against 80 in 1891, the death ratio to the daily average strength being 8·74 per cent. against 8·02 in the previous year. The increase in the death-rate is small compared to what has been reported from the jails, where it has advanced

from 30·9 in 1891 to 43·9 per mille in 1892. The reported mortality in the province generally has also increased from 26·94 in 1891 to 31·92 per mille in 1892.

7. The record of injuries and accidents is very small, the total number of cases being 11 against 16 in 1891. At Dallanda there were three injuries; at Dacca there were two accidents and one injury; at Patna there was one accident, and at Berhampore there were four cases of contusion. The Lieutenant-Governor notices with satisfaction that only two of the injuries, one of which was merely a contusion, were caused by the violent treatment of the patients by their keepers, and that in both cases the warders were punished with dismissal.

8. There were three escapes—one from each of the Asylums at Dallanda, Patna, and Dacca—against two in the previous year. The lunatics who escaped from Dallanda and Patna were recaptured, but no trace could be found of the other. The warders through whose carelessness the escapes occurred were adequately punished.

9. The following statement shows the income and expenditure of the past two years:—

GRAND TOTAL ...	......	......	......	......	94,780 12 1	86,293 0 1

The only item of expenditure calling for special notice is "diet. Under this head the increase, which took place in all the asylums except Cuttack, where the number of inmates was unusually low, amounted to Rs. 2,875-4-11, and was due to the high prices that prevailed in 1892. The following statement compares the average cost of each lunatic on account of diet during the years 1891 and 1892:—

	1891.	1892.
	Rs. A. P.	Rs. A. P.
Dullunda	37 14 1	42 13 2
Dacca	36 13 2	40 13 2
Patna	31 10 0	34 7 8
Cuttack	27 15 1	36 6 5
Berhampore	33 3 5	37 12 3

The average cost of each lunatic, calculated on the actual expenditure incurred, was Rs. 67-10-5 against Rs. 65-15-7 in 1891.

10. During the year, the Government of India suggested that the practicability of establishing dairy farms in connection with the Lunatic

Asylums in Bengal might be taken into consideration. At Dallanda a dairy has been in successful operation since 1889, and steps are now being taken to extend it. The only other asylum with a dairy attached to it is the Dacca Asylum. The Superintendent of the Patna Asylum having reported that want of space will not admit of a dairy being opened there, and that a dairy farm is not likely to be profitable, owing to the cheap rate at which milk sells in the bazaar, the project of establishing a dairy in connection with that asylum will be abandoned. Efforts will be made to start this experiment in the remaining asylums, the result of which should be described in some detail in future reports.

11. The total population of the European Lunatic Asylum at Bhawanipur rose from 50 in 1891 to 61 during the year under review. Of this number 35 were under detention on the 1st January 1892, and 26 were subsequently admitted, including nine criminal lunatics. During the year 17 patients were discharged cured, one was despatched to Europe under the Merchant Shipping Act, four were transferred to the care of friends, one was deported to Europe as still insane, one was discharged, and two died, leaving 35 under detention at the close of the year, the same number as at the close of the previous year. There was no want of accommodation either in the male or in the female wards, and the health of the patients was good throughout the year. There was one accident, but no case of injury or escape. The expenditure amounted to Rs. 22,831 against Rs. 25,370 in 1891, the decrease of Rs. 2,539 occurring under the heads of Public Works and Rates and taxes.

12. In paragraph 8 of the Resolution on the report for 1891, it was stated that the question of abolishing the Bhawanipur Asylum and transferring the patients to the Dallanda Asylum had been referred to a Special Committee. This Committee was unable to suggest any practicable and economical arrangement and the proposal was therefore abandoned, leaving the asylums to be managed as at present.

13. The rules for the control and management of Lunatic Asylums in Bengal were last revised in 1878. Since then a new Code of Criminal Procedure has been passed, the Acts relating to Lunatic Asylums have been amended on several points, and a large number of executive orders have been issued on the subject. A Committee was accordingly appointed during the year under review to undertake the revision of the rules and to lay down a clear and distinct procedure for the admission and discharge of both criminal and non-criminal lunatics, and for the treatment and disposal of recovered criminal lunatics. The report of the Committee is still awaited.

14. A set of rules was also prepared and submitted during the year by the Committee appointed in 1891 to examine the system of guarding lunatics in force in the Dallanda Lunatic Asylum, and to suggest improvements, and also to draw up for adoption in all lunatic asylums in Bengal special rules for the care and custody of criminal lunatics. On receipt of the Committee's report, the Inspector-General of Civil Hospitals was requested to obtain the opinion of the Superintendents of Asylums on their proposals, and to submit a comprehensive report on the subject. His reply has not yet been received, but it is shortly expected.

15. The report is submitted by Surgeon Colonel J. G. Pilcher, who assumed charge of the office of Inspector-General of Civil Hospitals, Bengal, in November 1892. The thanks of the Lieutenant-Governor are due to Dr. Pilcher for the report and for the punctuality with which it has been submitted. His Honour is glad to observe that the Inspector-General is able to speak in favourable terms of the work of the Superintendents of the Asylums and of their subordinates.

By order of the Lieutenant-Governor of Bengal,

J. A. BOURDILLON,

Offg. Secretary to the Govt. of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 22nd April 1893.

Division	No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.				
BURDWAN DIVN.	1	Burdwan April 22, '93 Kalna ... Katwa ... Raniganj ..	0·01 Nil Nil Nil	Weather—hot. Ploughing proceeding. Fodder and water generally sufficient. Prices of common rice:— Srs. Burdwan ... ... 10 to 13 Kalna ... ... 10 to 13 Katwa ... ... 13 Raniganj ... ... 13 } per rupee.
	2	Bankura „ 22, '93 Vishnupur ...	Nil Nil	Weather—hot. Land is being prepared for sowing. Supply of fodder and water sufficient. Common rice selling at 11½ seers per rupee both at the Vishnupur and Sadar markets.
	3	Birbhum „ 22, '93 Rampur Hát ...	Nil Nil	Weather—hot and dry. Ploughing and manuring of fields going on. Sugar-cane pressing nearly finished. Fodder and water sufficient. Price of rice from 12 to 14½ seers per rupee. Cattle-pox reported from some villages in outposts Mahmed Bazar and Rajnagar and in thana Sakulipur.
	4	Midnapore „ 22, '93	Nil	Weather—warm. Ploughing going on in places. Indigo doing well. Prices of common rice:— Srs. Sadar ... ... 12 Contai ... ... 14 Tamluk ... ... 12 } per rupee.
	5	Hooghly „ 22, '93 Serampore ... Jahanabad ...	Nil Nil Nil	Weather—hot. Nothing important to note. Cultivation for jute and rice continues. Cattle-disease still continues in the Sadar subdivision and recently there has been some recrudescense of it. Fodder and water still scarce in Pandua and Dwarbasini. Prices of common rice:— Srs. Sadar ... ... 11 Serampore ... ... 10 to 11½ Jahanabad ... ... 12 to 12½ } per rupee.
	6	Howrah „ 22, '93 Ulubaria ...	Nil Nil	Weather—hot. Condition of cattle good. Fodder and water-supply sufficient. Price of rice 10 to 11½ seers per rupee.
PRESIDENCY DIVN.	7	24-Parganas „ 22, '93	0·01	Weather—seasonable. Ploughing going on. No cattle-disease. Sufficient fodder and water. Prices of rice:— Srs. c. Sadar ... ... 10 to 13 0 Dum-Dum ... ... 12 0 Barasat ... ... 10 10 Diamond Harbour ... ... 13 0 Barrackpore ... ... 11 12 Basirhat ... ... 11 13½ } per rupee.
	8	Nadia „ 22, '93 Kushtia ... Meherpur ... Chuadanga ... Ranaghat ...	Nil Nil Nil Nil Nil	Weather—hot. Sowing of *aus* paddy has begun. Fodder and water for cattle sufficient. Cattle-disease reported from a few villages.
	9	Khulna „ 22, '93 Bagerhat ... Satkhira ...	Nil Nil Nil	Weather—hot. Harvesting of *boro* paddy continues; outturn 12 annas expected. Outturn of *rabi* in Sadar 12 annas. Ploughing for *aus* and *aman* continues. Common rice sells at 13 seers per rupee in Sadar and Bagerhat and 11 seers in Satkhira.
	10	Jessore „ 22, '93 Jhenida ... Magura ... Narail ... Bangaon ...	Nil Nil Nil Nil Nil	Weather—seasonable. Sowing of *aus* in progress. *Til*, indigo, jute, and sugar-cane promising. Plenty of fodder and water for cattle. Price of rice stationary.
	11	Murshidabad „ 22, '93	0·11	Weather—very hot and sultry. Harvesting of *rabi* crops completed. Sowing of *bhadoi* going on. Cultivation of jute has commenced. Mulberry and *til* plants progressing well. Fodder sufficient for cattle. Common rice sells at 12½ seers per rupee.

No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and State and prospects of the crops.
BENGAL—*concld.*			
CHITTAGONG DIVN.			
12	Chittagong April 25, '93	2·14	Weather—seasonable with occasional clouds. *Aus* cultivation commenced in places. Prospects good. Prices stationary.
13	Noakhali „ 22, '93	0·45	Weather—seasonable. Harvesting of *rabi* crops almost completed with an outturn of ten annas. Fodder and water available. No cattle-disease except in Sundip. Common rice selling at 13 to 13½ seers per rupee.
14	Tippera „ 22, '93	0·30	Weather—cloudy and cool. The rain has immensely facilitated the sowing of both *aus* and *aman* paddy, which is now being vigorously carried on. Prices of rice abated a little but are again towards increase. There is no lack of fodder and water.
15	Chittagong Hill Tracts. „ 21, '93	Nil	Weather—seasonable. *Jum* burning continues. Prospects of sugarcane and chillies good. Tobacco not doing well. No cattle-disease. Common rice is sold at 10 seers per rupee.
DACCA DIVN.			
16	Dacca „ 22, '93	0·32	Weather—very hot with strong wind. *Boro* paddy being harvested. *Aman*, *aus* and other standing crops doing well. The Subdivisional Officer of Narayanganj reports that on the 7th instant a tornado passed through some of the villages in that subdivision and blew down 473 houses and a large quantity of paddy, *mug* and mustard. Fodder available. No cattle-disease. Common rice selling at from 10 to 12 seers per rupee.
17	Faridpur „ 22 '93	3·47	Weather—seasonable. Faridpur was visited by a very heavy thunder-storm yesterday (21st) evening, but no serious damage has been reported. *Boro* paddy being reaped. Cultivation and sowing of *aus*, *aman* and jute still in progress. Common rice selling at from 11 to 13 seers per rupee. Cattle-pox reported from outposts Deorah and Sadarpur and thanas Baliakandi and Shibchar.
18	Backergunge „ 22, '93	Nil	Weather—seasonable. State and prospects of crops fair. Common rice selling at from 10 to 13 seers per rupee. Fodder and water sufficient.
19	Mymensingh „ 22, '93	0·63	Weather—hot. State and prospects of standing crops, including *boro*, good. Harvesting of *boro* commenced. Common rice selling at 11 to 13 seers per rupee. Condition of cattle good. Supply of fodder and water sufficient.
RAJSHAHI DIVN.			
20	Dinajpur „ 22 '93 Thakurgaon ...	0·02 Nil	Weather—hot with strong westerly wind during day; mornings occasionally cool and cloudy. Sowing of jute, sugarcane and *bhadoi* continues Prospects good. Prices of rice unchanged. Cattle in good condition. Supply of fodder and drinking water plentiful.
21	Rajshahi „ 22, '93 Nator ... Naugaon ...	Nil Nil Nil	Weather—seasonable: very hot and dry. Prospects of jute and other standing crops good. Ploughing in full operation almost everywhere. No cattle-disease. Fodder and water-supply ample. Price of rice varies from 11 to 15 seers per rupee.
22	Rangpur „ 22, '93 Gaibanda ... Nilphamari ... Kurigram ... Ulipur ...	0·35 Nil Nil Nil Nil	Weather—hot. Weeding of *aus* in progress. Tobacco crop nearly average. Average price of common rice 13 seers per rupee.
23	Bogra „ 22, '93	Nil	Weather—seasonable. Ploughing still going on. Standing crops benefited by recent rain. Common rice sells at 13½ seers per rupee. Fodder and water sufficient.
24	Pabna „ 22, '93	Nil	Weather—hot and windy. Ploughing and sowing going on. Price of common rice at Pabna 12 seers per rupee and at Sirajganj Rs. 3-10 to Rs. 4-12 per maund. Condition of cattle good. Water and fodder sufficient.
25	Darjeeling „ 22, '93 Siliguri ...	1·67 1·78	Weather—fine but hazy. Thunder-storms on 21st and 22nd. *In the hills:*—Wheat and barley coming to maturity. *Bhutta, kangni,* potatoes, *chhota marua* and *phafar* progressing favourably. *Tori* being harvested. *In the terai:*—Jute and *bhadoi* being sown. *Kangni* is ripe and being cut. Barley has been harvested. Prices of coarse rice:— Srs. Hills ... . 10 } per rupee. Terai ... ... 12 }
26	Jalpaiguri „ 22, '93	0·15	Weather—hot and cloudy. Ploughing and sowing continue. Condition of cattle good. Average price of common rice 13 seers per rupee. Fodder and water-supply sufficient.

No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR.			
Bhagalpur Divn.			
27	Monghyr April 22, '93 Begusarai ... Jamui ...	Nil Nil Nil	Weather—warm during day with strong westerly breeze. A few drops of rain last night. *Rabi* crops harvested; average 10 annas outturn. Indigo doing well. Lands prepared for *cheena* and sugarcane. No cattle-disease. Plenty of fodder and water. Prices stationary. Rice:— Srs. Sadar ... ... 13 to 15 } per rupee. Begusarai ... ... 14½ } Jamui ... ... 12½ }
28	Bhagalpur „ 22 '93 Banka ... Madhipura ... Supaul ...	Nil Nil Nil Nil	Weather—hot with strong west winds. *Rabi* harvest complete. A good *mahua* crop expected in Banka. A shower of rain wanted for *bhadoi* sowings. Price of common rice 15 seers 2 chitaks per rupee.
29	Purnea „ 22, '93 Kishanganj ... Araria ...	Nil Nil Nil	Weather—very hot in the day with strong east and west winds; cool at night and in the early morning. *Rabi* harvest over in Araria, where the outturn is good; elsewhere it is drawing to a close. Sowing of *bhadoi* and *aghani* paddy and of jute going on. Indigo sowing finished in parts of the Sadar subdivision. No cattle-disease. Fodder and water sufficient. Prices of common rice:— Srs. Araria ... ... 16 } per rpuee. Kishanganj ... ... 12 } Sadar ... ... 13 to 15 }
30	Malda „ 22, '93	Nil	Weather—hot with light westerly winds. Harvesting of *rabi* crops not yet finished. *Boro* paddy coming into ear. Lands are being prepared for *bhadoi* crops. Price of coarse rice 11 to 15 seers per rupee. Fodder and water-supply sufficient. Cow-pox still prevails in Shibganj thana.
31	Sonthal Parganas „ 22, '93 Deoghur ... Godda ... Jamtara ... Rajmahal ...	0·03 Nil Nil Nil Nil	Weather—hot. West winds. *Mahua* dropping freely; outturn will be very good. Mangoes very deficient. *Chaitali* crops reaped; outturn satisfactory. Water-supply better than last year but deficient. Fodder sufficient.
Patna Division.			
32	Patna „ 22, '93	Nil	Weather—hot. Threshing and winnowing of *rabi* in progress. Weighment of opium going on. Sugarcane and *cheena* doing well. Prices of common rice:— Srs. Sadar ... ... 16 } per rupee. Bihar ... ... 16¾ } Dinapore ... ... 15 } Barh ... ... 11½ }
33	Gaya „ 22, '93 Aurangabad ... Nawada ...	0·08 Nil Nil	Weather—very hot with variable winds. A slight storm last night (21st). *Rabi* harvest nearly over, with yield about three-fourths of an average. Sugarcane being planted. Price of common rice 14 to 15 seers per rupee. Fodder and water-supply sufficient.
34	Shahabad „ 22, '93	Nil	Weather—unsettled; sultry with dust-storms from the north-west. Sugarcane is thriving. Millet being sown extensively under irrigation. Prices still high. Fodder and water abundant.
35	Darbhanga „ 22, '93	Nil	Weather—very hot with high west winds. *Rabi* harvest completed and the average outturn estimated at 12 annas. Paddy, *mung* and indigo sowings coming on well. Supply of fodder for cattle sufficient. Prices remain stationary.
36	Muzaffarpur „ 22, '93 Sitamarhi ... Hajipur ...	Nil Nil Nil	Weather—seasonable. *Rabi* crops mostly reaped now; outturn fair. Lands under preparation for fresh crops. Fodder and water available.

	No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR—*concld.*				
PATNA DIVISION—*concld.*	37	Saran April, 22, '93 Siwan .. Gopalganj ...	0·03 Nil Nil	Weather—seasonable. West winds. Last two days unsettled with threatening of rain. Indigo in parts much damaged by caterpillars which are, however, now disappearing. Other crops on ground doing well. Prices stationary. Fodder and water ample. Prices of common rice:— Srs. c. Chapra ... ... 14 0 Siwan ... ... 13 2 } per rupee. Gopalganj 13 7
	38	Champaran „ 22, '93	Nil	Weather—hot. Threshing of *rabi* nearly over. Sowing of *cheena* and paddy has been delayed till rain falls. Weighment of opium going on. No marked change in prices. No cattle-disease. Water and fodder sufficient.
ORISSA.				
ORISSA DIVN.	39	Cuttack „ 22, '93	0·24	Weather—hot. Supply of fodder and water sufficient. Price of rice stationary.
	40	Puri „ 20, '93 Khurda ... Banpur ...	Nil Nil Nil	Weather—seasonable. Rain wanted. *Dalua* rice being harvested. Miscellaneous crops good. Rice sells at from 14 seers 10 chitaks to 17 seers 1 chitak per rupee.
	41	Balasore „ 22, '93	Nil	Weather—seasonable. Ploughing continues. Rice sells at 15 seers per rupee at Balasore and 17 seers at Bhadrak.
CHOTA NAGPUR.				
South-West Frontier Agency.				
CHOTA NAGPUR DIVN.	42	Hazaribagh April, 22, '93 Giridi ...	Nil Nil	Weather—seasonable. Sugarcane doing well. Mango prospects fair. *Mahua* yielding abundantly. No other crops. Fodder and water sufficient. Common rice selling at from 11 to 14 seers per rupee.
	43	Lohardaga „ 22, '93	Nil	Weather—hot. *Rabi* harvest almost finished. Ploughing progressing.
	44	Palamau „ 21, '93	Nil	Weather—seasonable. *Rabi* harvest still continues. Owing to unseasonable rainfall the produce is disappointing. Fodder and water-supply deficient. Cattle-disease prevalent in a few places. Rice selling at from 12 to 22 seers per rupee.
	45	Singhbhum „ 22, '93	Nil	Weather—cloudy and threatening; very hot. Crops on the ground doing well. *Mahua* on the whole yielding a fair outturn. Common rice selling at from 12 to 14 seers per rupee. No cattle-disease reported. Water and fodder plentiful.
	46	Manbhum „ 22, '93 Gobindpur ...	Nil Nil	Weather—hot; cloudy the last day or two. *Mahua* still being gathered. Lands being ploughed. Price of rice 10 to 13 seers per rupee. Fodder and water-supply ample.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h, 10h, 16h and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

⌓, dew; t, thunder; <, lightning; o, overcast; d, drizzling rain.

* Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period
The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 01
rainfall the normal mean are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station
district, *i.e.*, from total rainfall at the subdivisional stations in the district sending in returns divided by the number of stations. A rainy day is one of

for the week ending Saturday, the 22nd of April 1893.

					DISTRICT OBSERVATIONS.										
					Of week.				Rainfall.						
									Since 1st of month.			Since 1st April 1893.			
Variation from normal mean.	Mean 8 A.M. temperature.	Average humidity at 8 A.M.	Average cloud amount at 8 A.M.	Rainfall of week at observing station.	Mean for district.	Normal mean. for the last ten years. The variations are *negative* when the mean for the week is less than the corresponding normal mean, and *positive* when greater. The numbers denoting cloud amount represents the part of the sky covered the whole sky being denoted by 10. Under the head District observations of for the period in question during the past ten years. The means of the district are the numerical average of the rainfall returned received in the which at least a tenth of an inch fell.

Statement of Rainfall in Bengal for the week ending Saturday (8 a.m.), the 22nd of April 1893.

Meteorological Division.	District.	Station.	Rainfall. Sunday, 16th.	Monday, 17th.	Tuesday, 18th.	Wednesday, 19th.	Thursday, 20th.	Friday, 21st.	Saturday, 22nd.	Total number of rainy days.	Rainfall of week.	Average rainfall of week.	Total rainfall since 1st of month.	Average total rainfall from 1st of month.	Total rainfall since 1st April 1893.	Average rainfall from 1st April to date.

Explanation.—... indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the 25th April* 1893.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 22ND OF APRIL 1893.

DURING the latter half of the previous week ordinary hot weather conditions seemed to be established over the greater part of the province, the exceptional cases occurring at the extreme northern stations where showers were falling. These showers were probably due to the approach of a low pressure area, which first began to affect the distribution in Bengal on the first day of the present week, and which passed slowly across the province, causing in some parts a defect of about 0·2 inch.

The effect of the depression was not so decided as is usual in such cases, as the rainfall was confined almost entirely to the more northern districts in North Bengal, but its influence on the wind circulation was easily traced, in the direction changing from east to west in Bihar and later in North Bengal, while the steeper gradients caused stronger southerly winds in the southern districts. Pressure was falling slowly on the first day of the week, and the fall continued more rapidly on the second day when the centre of the depression was over the Sonthal Parganas. Easterly winds were still general in Bihar on the latter day, but on the 18th they had changed to west at all the western stations, the depression having moved eastward. After the 18th pressure began to recover, but changes were nowhere large, and never were so till the end of the week. As westerly winds advanced, cloudless weather with rising temperature became general in all districts till the last day of the week, the 22nd, when showers, usually very light, fell at most of the stations in East and North Bengal.

Pressure—Has been below the normal throughout the week. A steady fall continued during the first three days and then a tendency to rise prevailed, but the changes were so small that the readings never recovered their normal values within a tenth of an inch. The means for the week are below the normal by amounts varying between 0·1 inch and 0·15 inch in all districts except Chota Nagpur and Orissa, where the mean defect is about 0·08 inch.

Temperature.—While showers were falling in East and North Bengal during the first three days of the week, temperature was below the normal in these districts by one or two degrees. In the western half of the province, however, there was excess of about the same amount. After the depression passed eastward, the westerly winds caused a rise of temperature in all districts, and readings were everywhere above the normal by between two and three degrees till the 22nd, when showers again began to fall in North and East Bengal accompanied by a lowering of the temperature. The means for the week are slightly below the normal in Orissa and North Bengal, and above in the other districts by amounts varying from 1°·2 in South-West Bengal to 2°·2 in North Bihar.

Table showing the excess or defect of the actual mean temperature from the normal for the week ending 22nd April 1893.

	Normal mean maximum temperature for the week ending 22nd April.	Actual mean maximum temperature for the week ending 22nd April 1893.	Variation of actual mean from the normal.	Normal mean minimum temperature for the week ending 22nd April.	Actual mean minimum temperature for the week ending 22nd April 1893.	Variation of actual mean from the normal.	Normal mean daily temperature for the week ending 22nd April.	Actual mean daily temperature for the week ending 22nd April 1893.	Variation of actual mean from the normal.

Darjeeling	63·2	63·1	−0·1	48·6	51·1	+2·5	55·9	57·1	+1·2

Rainfall—Has been very light in North and East Bengal and practically absent in other parts. In the north and east, as stated above, light showers fell in the early part of the week and again on the last day, but the average for North Bengal and for East Bengal only averages about 50 per cent. of the normal falls. In North Bihar and Chota Nagpur no falls were reported, while in Orissa, South-West Bengal and South Bihar the average falls were between ·01 and ·03 inch.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 22nd of April 1893 :—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 1st April 1893.

RESOLUTION ON THE ANNUAL REPORT OF THE HEALTH OFFICER OF THE PORT OF CALCUTTA FOR THE YEAR 1892.

No. 1119Marine.

GOVERNMENT OF BENGAL, MARINE DEPARTMENT.

Dated Calcutta, the 1st May 1893.

RESOLUTION.

READ—

A letter, No. 2586, dated 28th March 1893, from the Sanitary Commissioner for Bengal, submitting the report of the Health Officer of the Port of Calcutta for the year 1892.

Establishment.—Dr. Forsyth was the Health Officer of the Port of Calcutta throughout the year, except from the 3rd September to 28th October, when Surgeon Captain Green officiated for him. The work was carried out in the steam launch *Relief*, and in a steam cutter.

2. *Inspections.*—The total number of vessels inspected by the Health Officer of the Port during the year was 1,497 against 1,501, 1,394, and 1,443 in the three preceding years. Sir Charles Elliott desires that in future reports the number of vessels that entered the Port in the year should be given with the number of vessels uninspected, and the reasons for such non-inspection.

3. *Ventilation of crew spaces.*—The ventilation of the forecastle of iron built cargo steamers has, in a few cases, been improved, but in no instance has a wooden sheathing been laid over the iron roof.

The Health Officer writes:—"In the case of the Greenock Shipping Company, I hope that their vessels will be improved, as the Secretary was in port in April and May, and he admitted that the Managers had not the faintest idea of what life in the forecastle was in the Indian hot season; that he would on his return place my suggestions before the Manager for immediate compliance; and that, in case of additions to their fleet, he would suggest that all quarters should be built on deck. In the latest additions to the City Line of steamers, quarters for the crew are built on the upper deck. The contrast between these and the quarters on the main deck is great, and no line visiting this port give their crews such well lighted and ventilated quarters."

The question of improving the accommodation for the crew of such steamers has been referred to the Government of India, in the Finance and Commerce Department, with the suggestion that the Board of Trade should be moved to endeavour to give effect to Dr. Forsyth's suggestions for sheathing the forecastle deck, and for improving the ventilation of, and providing a double awning with side curtains for, the forecastle. If the Board of Trade refuse to insist on these alterations being made, the Lieutenant-Governor is of opinion that it will be necessary to amend the Indian Ports Act of 1889 so far as to enable the Local Government to insist on such temporary alterations being made, while the vessel is in port, as will meet the requirements of the case.

4. *Bathing accommodation for native crews.*—The provision of a protected bathing place is being carried out on nearly all vessels coming to the port.

5. *Sickness and mortality among European seamen.*—The number of European seamen who arrived in the Port during the year was 21,635, against 21,505 and 19,496 in the two preceding years, and the daily average number in Port was 2,133 against 1,420 and 1,679. Including deaths out of hospital, the death rate per mille during the year was 11·72. Of this 3·28 was from cholera and 8·44 from other causes. The Lieutenant-Governor views with great satisfaction this low death-rate, which is the lowest on record.

The total number of natural deaths was 25, against 42 and 40 in the two preceding years. Of these 25 deaths, 22 occurred in hospital and 3 outside.

The total number of admissions into hospital was 2,204, against 1,284 and 1,419 in the two previous years. No reason is given for the large increase in the number of admissions into hospital.

The admissions from cholera numbered 12, with 7 deaths; from sunstroke 7, with 3 deaths; and from small-pox and scurvy 2 and 8 respectively, with no deaths. The number of cases of drowning was 8 against 9 and 14 in the two preceding years.

The Coroner of Calcutta having reported in the case of one of the deaths by drowning that there was unnecessary exposure to the sun, copies of Marine Notification No. 104 of the 14th April 1891, prohibiting work involving direct exposure to the sun between 9 A.M. and 4 P.M., were circulated to the Masters of Ships in the port, and the Commissioner of Police directed to prosecute under section 54 of the Indian Ports Act any breaches of the rule observed.

6. The following table gives the admissions into hospital of European seamen suffering from venereal diseases:—

Year.	Total admissions.	Rate per mille.
1883	237	127·4
1884	184	109·2
1885	170	100·4
1886	417	179·2
1887	228	120·4
1888	183	121·1
1889	186	114·3
1890	248	147·7
1891	185	129·7
1892	479	224·5

The number of admissions during the year is the highest on record, and the Health Officer reports that the masters of vessels complain of numbers of their crew being rendered unfit for work soon after leaving port from venereal affections.

7. There were 43 deaths at sea during the year on vessels entering the port, against 28 and 32 in the two preceding years.

8. *Sickness and mortality among the native floating population.*—The following figures give the mortality from all causes among the native floating population, the averages being calculated on a population of 25,000:—

		Total deaths.		Ratio per mille.	
		1892.	1891.	1892.	1891.
Cholera ...	...	73	97	2·92	3 88
Bowel complaints ...	...	3	7	0·12	0·28
Fever, malarious ...	...	11	11	0·44	0·44
Do., simple ...	...	13	22	0·52	0 88
Other causes ...	..	32	33	1·28	1·32
Total	...	132	170	5·28	6·80

Of the 132 deaths, 35 occurred in hospital, of which 21 were from cholera.

9. *Food.*—The complaints as to the quality of food on board vessels coming to the Port were few, and of these only a few were justified. The Health Officer mentions that the sailors after being a long time in port are very desirous of occasionally being given salt meat as a change.

10. *Conservancy.*—The drain and latrine in Messrs. Ahmuty and Company's compound, noticed in the Resolution on the Annual Report of the Health Officer for 1891, has been altered to meet requirements, but the Health Officer reports that the brickfield foreshore at Ghoosery, and the Mateabroog foreshore of Babu Doorga Prosonno Ghose's property, are still used as latrines by the public. The attention of the District Magistrates will be drawn to this.

11. *Corpses and carcasses.*—The Lieutenant-Governor is pleased to find from the Health Officer's report that there has been some decrease in the number of corpses and carcasses found floating in the river.

12. *Water supply.*—The supply of Municipal filtered water to the vessels in the port was satisfactory in every respect.

13. The Health Officer has, in the course of his report, made several suggestions and proposals which require much consultation and consideration from legal and other aspects. It should be remembered that the annual report is a record of the events of the year, and questions on which orders are required should be separately submitted.

The information given in the report regarding the accommodation of European seamen, the crowding of the quarters of native crews, the sea-diet scale of sailing vessels, and the facilities existing for the communication of reasonable grievances of sailors as regards the quality of their food, and the seaworthiness of the ship, is important as bearing on the welfare of seamen, and it is therefore well that the public should know that the alleged defects are under consideration, and that the question whether the Government can lawfully interfere in any of these matters, or would be well advised to do so, will be separately considered.

By order of the Lieutenant-Governor of Bengal,

C. W. ODLING,

Secretary to the Govt. of Bengal.

ANNUAL REPORT ON THE WORKING OF THE CHEMICAL EXAMINER'S DEPARTMENT FOR 1892.

RESOLUTION.

MEDICAL.

No. 1607Med.

Dated Calcutta, the 26th April 1893.

READ—

A letter from the Inspector-General of Civil Hospitals, No. 2603, dated 11th March 1893, forwarding the Report of the Chemical Examiner for the year 1892.

Read also—

The Report for 1891 and the Resolution recorded on it.

The following table shows the general nature of the work done during the year compared with that of the previous year:—

	1891.	1892.
Medico-legal.		
Human viscera tested for poison ...	228	276
Animal ditto ditto ...	118	147
Fowls' ditto ditto ...	...	2
Dogs' ditto ditto ...	3	1
Pigeons' ditto ditto ...	5	...
Cats' ditto ditto ...	1	...
Mules' ditto ditto ...	1	...
Other substances suspected to be or to contain poison, including cattle-poison ...	745	1,000
Articles examined in connection with a case of forged notes	...	16
Articles tested for blood stains	235	234
Ditto for seminal stains ...	21	18
Ditto for both blood and seminal stains	49	46
Human hair	7	5
Cotton fibre	1	...
Total Medico-legal ...	1,414	1,745
Articles tested for purity and quality.		
Potable water	100	149
Petroleum and inflammable oils	397	382
Lime-juice	26	23
Opium confiscated	103	53
Do. from the Board of Revenue, Lower Provinces	16	17
Salt	12	2
Ghee	39	44
Spirit for deleterious adulterations ...	53	23
Spirit determinations for the Collector of Customs, Calcutta	147	193
Small Arms Ammunition Factory, Dum-Dum	520	609
Fort William Arsenal	2	1
Medical Store Department	1	12
Telegraph ditto	6	13
Commissariat ditto	74	37
Army Clothing ditto	3	...
Other departments	150	100
Total tested for purity and quality ...	1,649	1,658
GRAND TOTAL ...	3,063	3,403

2. The number of analyses performed during the year under report was 3,403 against 3,063 in 1891 and 2,746 in 1890. These figures show a considerable increase of work in the Chemical Examiner's Department. Besides analytical work, the Chemical Examiner had to report on 16 technical questions referred to him, and on 10 applications for leave to file specifications for patent processes.

3. The increase was almost entirely in the number of medico-legal analytical cases, which rose from 1,414 to 1,745. In 1,426 of these cases (against 1,101 in 1891) human viscera or other substances were sent up for examination under the suspicion of containing poison. In 150 out of 276 human viscera, and in 489 other cases of suspected substances, out of 1,000 sent up, no poison was found. The principal poisons detected were arsenic, opium and aconite. In the case of human remains, opium was the most common form of poison, having been found in 26 per cent. of these cases. Arsenic was discovered in as many as 79·59 per cent. of the supposed cattle-poisoning cases in which animal viscera were sent up for examination.

4. The Lieutenant-Governor notices with satisfaction the increase which has taken place in the number of samples of potable water sent up for analysis, which increased from 61 in 1890 to 100 in 1891 and 149 during the year under report. Of the 149 samples examined in 1892, 13 were for Municipal authorities, 69 for jails and 67 for other departments. The results of these analyses are set forth in a special table in the Chemical Examiner's Report. After issue of the Resolution on the Administration Report for 1891, the Sanitary Commissioner was asked when inspecting a municipality to procure samples of the water in ordinary use, in order that they might be submitted to the Chemical Examiner for analysis. The Lieutenant-Governor hopes that greater effect will be given to these orders during the current year, and he desires that the Deputy Sanitary Commissioners will share in this work. The duty of testing the water of all the towns in Bengal must be taken up on a uniform and general plan, so as to obtain information where a pure water-supply ought to be provided, and where it is possible to rest content with the present supply. This should be the work of the Sanitary Commissioner. Besides this, whenever an epidemic of sickness occurs, which the Civil Surgeon thinks attributable to the water of the place, he should be authorised and enjoined to send in samples of the water for examination. Separate instructions will be issued to this effect.

5. The thanks of the Lieutenant-Governor are due to Dr. Ranking for his concise but full report, and for the good work he has done during the period he held charge of the office. The Lieutenant-Governor also notices with satisfaction the high terms in which Dr. Ranking speaks of the work done by the Assistant Chemical Examiner, Rai Taraprasana Ray Bahadur.

By order of the Lieutenant-Governor of Bengal,

J. A. BOURDILLON,

Offg. Secretary to the Govt. of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 29*th April* 1893.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period
The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 01
rainfall the normal mean are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station
district, i.e., from total rainfall at the subdivisional stations in the district sending in returns divided by the number of stations. A rainy day is one of

for the week ending Saturday, the 29th of April 1893.

Variation from normal mean.	Mean 8 A.M. temperature.	Average humidity at 8 A.M.	Average cloud amount at 8 A.M.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. Rainfall. Of week. Mean for district.	Normal mean.	Average number of rainy days.	Normal number of rainy days.	Since 1st of month. Mean for district.	Normal mean.	Variation.	Since 1st April 1893. Mean for district. Explanation.—... indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the 2nd May* 1893.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 29TH APRIL 1893.

FAIRLY settled weather prevailed at the beginning of the week in all districts, except East and North Bengal, where rain was falling in local showers. The pressure distribution was very nearly normal over the greater part of the province, but there was a shallow low-pressure area to the south-west, and this was causing easterly winds in Lower Bengal.

During the first two days pressure rose considerably, and as the increase was rather greater towards the north, the relatively low readings continued in the south-west. After this, however, a double series of important changes commenced. A small cyclonic storm formed in the Andaman sea, and a little later a depression approached from the north-west. The cyclonic storm passed over Rangoon on the 27th, moving in a north-easterly direction, after giving rather stormy weather on the coast and heavy general rain in Lower Burma. Very large atmospheric oscillations followed, due to the recovery of pressure in Burma after the small storm passed away, and partly to the approach of the other depression from the west. Gradients from being very slight over the north of the Bay became in a short time much steeper than is usual at this time of the year. In consequence of the steeper gradients strong moisture-laden winds blew in all districts, and general rain fell except in Orissa and part of South-West Bengal. Rainfall was most general on the last day of the week, and heaviest in East Bengal. The depression from the west was then over the central districts, and was causing strong easterly winds at all stations to the east of it.

Pressure.—Changes during the week have been unusually large. The fairly rapid rise in the early part of the week brought readings to about a 10th of an inch above the normal. The fall which then set in caused a large defect during the remaining days of the week. The changes on the 27th, when the small storm was passing near Rangoon varied from a rise of a twentieth of an inch in the west of Bihar to a fall of ·176 inch at Rangoon, a relative fall of nearly a quarter of an inch. On the 28th, when pressure was rising in Burma, changes varied from a rise of ·157 inch at Rangoon to a fall of ·177 inch at Arrah, a relative change of a third of an inch in a direction opposite to that of the previous day. Defect then ranged from ·13 inch in the south of the Bay to ·25 inch at Dehree. On the 29th pressure was again rising, and readings were relatively lowest at some of the central stations.

Temperature.—Has been steadily below the normal by several degrees at all except a few stations in North Bihar, North Bengal, and East Bengal, where there has been at times a small excess. Means are everywhere below the normal, and the average defect for the large divisions varies from 2·3° in North Bihar to 6° in Chota Nagpur.

Rainfall.—Numerous showers have fallen in all districts. General heavy rain has fallen in North Bengal and parts of East Bengal, but in the extreme west of the province the falls were much lighter and more scattered, especially in the western districts of South Bihar. As the rainfall was due to thunder-storms, the amounts recorded at the rainfall stations are very various in amount, but the mean falls for the larger divisions are all above the normal. Excess is 1·64 inches in North Bengal, 1·04 inches in North Bihar, and in the other districts it varies from ·84 inch to ·39 inch. The amount received in South Bihar is nearly nine times the normal fall for the week, and in Chota Nagpur more than eleven times.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 29th of April 1893:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.						RAINFALL.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 1st April 1893.

LIBERALITY OF THE MAHARAJA OF CHOTA NAGPUR.

No. 49T.M., dated Darjeeling, the 5th May 1893.

From—J. A. BOURDILLON, ESQ., Offg. Secretary to the Government of Bengal, Municipal Department,

To—The Commissioner of the Chota Nagpur Division.

I AM directed to acknowledge the receipt of your letter No. 8M., dated the 17th April 1893, with which you forward a copy of a letter from the Honorary Secretary to the Dufferin Fund Committee, Ranchi Branch, reporting that the Maharaja of Chota Nagpur has made a donation of Rs. 2,000 to the Fund on the occasion of the recent visit of His Honour the Lieutenant-Governor to Chota Nagpur. The amount is intended to defray part of the cost of building a zenana hospital to be attached to the Charitable Dispensary at Ranchi.

2. In reply, I am directed to say that the Lieutenant-Governor accepts the donation, and to request that you will be so good as to convey to the donor an expression of His Honour's thanks for his liberality and public spirit. This letter will be published in the *Calcutta Gazette*.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 6th May 1893.

No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.			
	BURDWAN DIVN.		
1	Burdwan May 6, '93 Kalna ... Katwa ... Raniganj ..	4·05 1·69 3·12 2·70	Weather—cool for the time of year and stormy. Ploughing going on since the recent rain. Fodder and water sufficient. Prices of common rice :— Srs. Burdwan ... ... 10 to 13 per rupee. Kalna ... ... 10 to 13 per rupee. Katwa ... ... 13 per rupee. Raniganj ... ... 13 per rupee.
2	Bankura „ 6, '93 Vishnupur ...	1·61 2·5	Weather—cloudy with occasional storms. Ploughing going on. Sugarcane is being planted. Fodder and water-supply sufficient. Price of rice 11½ seers per rupee both at Sadar and Vishnupur.
3	Birbhum „ 6, '93 Rampur Hát ...	1·09 0·93	Weather—cloudy with seasonable showers of rain. Sky still overcast. Cool for the time of year. Ploughing of land is briskly going on. No crops to report upon. Fodder is scanty but water sufficient. State of cattle normal. Price of rice stationary, being 12 to 14½ seers per rupee.
4	Midnapore „ 6, '93	1·69	Rain all over the district. Ploughing and sowing operations going on. Prices of common rice :— Srs. Sadar ... ... 11 per rupee. Contai ... ... 14 per rupee. Tamluk ... ... 12 per rupee. Garhbeta ... ... 11 to 11½ per rupee.
5	Hooghly „ 6, '93 Serampore ... Jahanabad ...	0·96 1·67 2·80	Weather—changeable and stormy; very cool for the season. Cultivation continues and will be considerably facilitated by the rain. Water level still remains very low, the soil absorbing all the rain that falls. Prices of common rice :— Srs. Sadar ... ... 10 to 11 per rupee. Serampore ... ... 10 to 11½ per rupee. Jahanabad ... ... 12 to 12½ per rupee.
6	Howrah „ 6, '93 Ulubaria ...	1·49 2·25	Weather—cool for the time of year. Paddy and jute being sown. Condition of cattle good. Fodder and water-supply sufficient. Price of rice 10 to 11½ seers per rupee.
	PRESIDENCY DIVN.		
7	24-Parganas „ 6, '93	2·54	Weather—seasonable. Sowing of *aus* and jute commenced. No cattle-disease. Sufficient fodder and water. Prices of common rice :— Srs. C. Sadar ... ... 10 to 13 8 per rupee. Basirhat ... ... 12 5 per rupee. Barrackpore ... ... 11 12 per rupee. Dum-Dum ... ... 11 10 per rupee. Barasat ... ... 10 9 per rupee. Diamond Harbour ... ... 13 0 per rupee.
8	Nadia „ 6, '93 Kushtia ... Meherpur ... Chuadanga ... Ranaghat ...	2·17 5·27 2·64 0·53 1·98	Weather—cool for the time of year. Sowing of paddy proceeding briskly everywhere. Sugarcane doing well. Ample fodder and water for cattle. Prices stationary.
9	Khulna „ 6, '93 Bagerhat ... Satkhira ...	2·08 1·14 2·73	Weather—hot and rainy. Harvesting of *boro* continues; outturn estimated at 12 annas in Bagerhat. Land is being prepared for *aman* and *aus* and jute is being sown. Common rice sells at 10½ seers per rupee at Satkhira and at 13 seers per rupee at Sadar and Bagerhat. Fodder and water for cattle sufficient.
10	Jessore „ 6, '93 Jhenida ... Magura .. Narail ... Bangaon ...	4·72 4·42 4·57 5·17 0·99	Weather—cloudy with occasional showers and storms in the afternoon. The heavy rainfall of the week has retarded the sowing of *aus* and *aman* in low lands, but has benefited the paddy previously sown. No more rain wanted for the present. *Til*, jute and indigo promising. Plenty of fodder and water for cattle except in a few places in thana Sharsha.
11	Murshidabad „ 6, '93	0·33	Weather—seasonable; at times cloudy. Sowing of *aman* and *aus* paddy continues. Indigo and *til* are promising. The recent rain has done good to the *bhadoi*, jute and mulberry plants. Fodder sufficient for cattle. Three cases of cattle-disease reported from Kandi. Coarse rice sells at 13 seers per rupee.

Division	No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concld.*					
CHITTAGONG DIVN.	12	Chittagong	May 6, '93	5·71	Weather—seasonable. Prospects of crops good. *Aus* cultivation going on. Prices stationary. Condition of cattle generally good. Supply of fodder sufficient.
	13	Noakhali	„ 6, '93	24·31	Weather—hot, alternating with heavy rain. Serious damage has been done by heavy rain to *rabi* crops that are still on the ground and to young paddy shoots. Fodder and water sufficient. No cattle-disease to any serious extent. Common rice sells at 12 to 13 seers per rupee.
	14	Tippera	„ 6, '93	10·11	Weather—on the whole favourable to cultivation, but rain unusually heavy for the season. *Boro* paddy being harvested. Standing crops on high ground improved by late rain. Jute and *til* somewhat damaged in low lands. Sowing interrupted.
	15	Chittagong Hill Tracts.	„ 4, '93	4·85	Weather—hot and rainy. *Jum* burning has been retarded a great deal owing to the early fall of rain. Sowing in *jums*, however, commenced in some places. Condition of cattle generally good. Common rice being sold at:— Srs. Rangamati ... ... 10 } per rupee. Bandarban ... ... 9¾ } per rupee. Manicksury ... ... 16 } per rupee.
DACCA DIVN.	16	Dacca	„ 6, '93	4·71	Weather—cloudy and rainy. Heavy rain fell in Narayanganj. Harvesting of *boro* paddy, *cheena* and *kaon* going on *Aman*, *aus* and jute thriving. Fodder available. No cattle-disease. Common rice selling at from 10 to 12 seers per rupee.
	17	Faridpur Goalundo Madaripur	„ 6 '93	3·55 6·68 5·23	Weather—very unsettled and wonderfully cool for the time of year. State of young crops good. *Boro* paddy being reaped with a good outturn. Cultivation and sowing of low lands much retarded by the heavy rain. Common rice sells at from 10 to 12 seers per rupee. Cattle-pox still prevalent in three thanas. Fodder available, and otherwise condition of cattle good.
	18	Backergunge Patuakhali Bhola	„ 6, '93	7·75 1·36 12·87	A succession of thunderstorms with heavy rain. The heavy rain has damaged the *aus* plants. Common rice selling at from 9 to 12 seers per rupee. Fodder and water sufficient.
	19	Mymensingh	„ 6, '93	5·01	Weather—cool, cloudy and stormy. State and prospects of crops good. *Boro* paddy not fully harvested in all parts of the district. In the Netrakona subdivision the outturn of *boro* crop is expected to be 16 annas. Common rice selling at from 11 to 14 seers per rupee. Health of cattle good. Supply of fodder and water sufficient.
RAJSHAHI DIVN.	20	Dinajpur Thakurgaon	„ 6, '93 ...	2·83 7·70	Weather—cloudy and rainy during the whole week with occasional breaks. The rainfall has been excessive. No more rain wanted at present. Sowing of *bhadoi* and jute going on. Price of rice unchanged. Cattle in good condition. Fodder and drinking water plentiful.
	21	Rajshahi Nator Naugaon	„ 6, '93	1·42 3·50 3·34	Weather—very cool for time of year, owing to heavy falls of rain. Prospects of standing crops excellent. Agricultural operations much facilitated by late rain; but a break in the weather would now be advantageous. Supply of water and fodder ample. No cattle-disease anywhere. Price of rice varies from 11 to 15 seers per rupee.
	22	Rangpur Gaibanda Nilphamari Kurigram Ulipur	„ 6, '93	2·32 3·66 1·22 2·50 2·31	Weather—unsettled. Prospects of *bhadoi* crop favourable. Price of common rice 12 seers per rupee.
	23	Bogra Sherpur Nowkhila	„ 6, '93	2·14 0·42 2·87	Weather—stormy and unsettled. Prospects good. Lands are being prepared for *aman*. *Aus* and jute are doing well. Common rice sells at 13½ seers per rupee. Fodder and water sufficient.
	24	Pabna	„ 6, '93	3·57	Weather—seasonable, with occasional showers. The rain has done good to the rice and sugarcane crops. Price of rice at Sirajganj Rs. 3-10 to Rs. 5 per maund and at Pabna 12 seers per rupee. Condition of cattle good. Water-supply and fodder sufficient.
	25	Darjeeling Siliguri	„ 6, '93 ...	0·89 1·43	Weather—wet and cloudy in afternoons. Mornings fine. *In the hills*:—Wheat and barley being harvested. Potatoes, *kangni*, *bhadoi*, *marua* and *bhutta* progressing favourably. *In the terai*:—Jute and *bhadoi* coming up. Fodder and water sufficient. Prices of coarse rice.— Srs. Hills ... ... 10 } per rupee. Terai ... ... 12 } per rupee.
	26	Jalpaiguri	„ 6, '93	1·91	Weather—cloudy and rainy with occasional breaks. Untimely rain has impeded the growth of jute and *bhadoi* cultivation. Price of rice unchanged. Fodder and water sufficient. No cattle-disease reported.

No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR.			
Bhagalpur Divn.			
27	Monghyr May 6, '93	1·70	Weather—cloudy with occasional showers of rain; cool during the week. Lands being ploughed for *bhadoi*. *Cheena* almost ripe. Prices of coarse rice:— Srs. Sadar ... ... 13 to 15; Begusarai ... ... 14½; Jamui ... ... 12½ } per rupee.
	Begusarai ...	0·97	
	Jamui ...	1·65	
28	Bhagalpur " 6 '93	2·75	Weather—cool; cloudy and heavy showers. The heavy rain in the Sadar sub-division has done damage to the gram and wheat still lying on the threshing-floor, otherwise prospects are favourable.
	Madhipura ...	0·42	
	Supaul ...	1·53	
29	Purnea " 6, '93	0·88	Weather—cloudy and remarkably cold for the season. *Bhadoi*, jute and *aghani* sowings in progress. Seeds germinating well. The heavy rain has been beneficial, but no more is required. Fodder and water plentiful. Prices stationary.
	Kishanganj ...	1·85	
	Araria ...	1·74	
30	Malda " 6, '93	1·68	Weather—cool and cloudy throughout the week. Threshing of *rabi* crops drawing to a close. Rain has benefited the *bhadoi* crops already sown. Prospect of *boro* rice continues favourable. It is being reaped in some places. Price of coarse rice varies from 11 to 15 seers per rupee. No want of fodder or drinking water.
	Chanchal ...	1·33	
	Shibganj ...	2·69	
	Gajole ...	3·59	
31	Sonthal Parganas " 6, 93	*	Weather—cloudy and cool with storms. A severe thunderstorm with strong wind, rain and hail on the 3rd instant. The storms have damaged the mango crop. *Boro* paddy in Rajmahal is doing well. Prices much the same. Fodder and water plentiful.
	Deoghur ...	1·05	
	Godda ...	1·50	
	Jamtara ...	1·88	
	Pakur ...	2·73	
	Rajmahal ...	2·64	
Patna Division.			
32	Patna " 6, '93	1·13	Weather—unseasonable; cloudy. Recent rain expected to do harm to the crops not yet brought home. Threshing still going on. Sugarcane and millets doing well. Opium weighment about to be finished. Prices of food-grains generally stationary. Common rice sells at:— Srs. Sadar ... ... 15½; Barh ... ... 11½; Dinapore ... ... 15 } per rupee.
	Barh ...	1·16	
	Dinapore ...	0·35	
33	Gaya " 6, '93	0·76	Weather—cloudy and unsettled with several thunderstorms. The rain has done much good to the young sugarcane, but damaged what *rabi* crops are lying on the threshing-floors. Prices remain about the same. Fodder and water-supply sufficient.
	Nawada ...	0·58	
	Jahanabad ...	0·70	
	Aurangabad ...	Nil	
34	Shahabad " 6, '93	2·07	Weather—unsettled; frequent storms with rain from the north-west. The rainfall in the north has benefited the sugarcane, millet and Indian-corn, but great damage has been done to the mango crop, which will be a failure throughout the district.
	Buxar ...	0·21	
35	Darbhanga " 6, '93	3·08	Weather—occasionally cloudy and stormy. Heavy rain at head-quarters on the 4th instant. The rainfall of the week has greatly benefited the paddy, *mung* and indigo crops. It has also enabled the cultivators to proceed with the cultivation for *bhadoi* crops. Mango crop is reported to have been slightly damaged by hail. Fodder for cattle sufficient. Prices almost stationary.
	Madhubani ...	1·93	
	Samastipur ...	1·01	
36	Muzaffarpur " 6, '93	1·04	Weather—unsettled and cloudy. *Marua, cheena, kado*, paddy and *makai* on low lands being sown. The rainfall has facilitated the preparation of lands for the *bhadoi* and rice sowings. No disease among cattle. Fodder and water sufficient.
	Sitamarhi ...	1·39	

* Figures not furnished.

Division	No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR—*concld.*				
PATNA DIVISION—*concld.*	37	Saran May, 6, '93	1·08	Weather—first part of the week fine, latter part stormy. East wind. Agricultural prospects good. Prices almost stationary. Water and fodder ample. Prices of common rice :— Srs. c. Chapra ... ... 13 0 } per rupee. Siwan ... ... 12 8 Gopalganj 13 7
	38	Champaran „ 6, '93	0·65	Weather—cool on account of rainfall. Prospects of indigo and food-crops have much improved owing to the rain which fell during the week. Opium weighments at Sadar have been finished; those at Ekderi about to be commenced.
ORISSA.				
ORISSA DIVN.	39	Cuttack „ 6, '93	0·78	Weather—unsettled. Lands being ploughed. Supply of fodder and wated ample. Current prices of common rice :— Srs. c. Srs. c. Sadar ... ... 10 8 to 14 7 } per rupee. Kendrapara ... ... 15 12 to 20 0 Jajpur ... ... 15 12 to 18 6 Banki 17 0
	40	Puri „ 4, '93	1·23	Weather—hot. Lands are being cultivated for the ensuing *sarad* crop. Harvesting of *dalua* paddy still going on. Miscellaneous crops good. Prices of common rice stationary.
	41	Balasore „ 6, '93	3·60	Weather—very stormy and cool. Ploughing continues, though somewhat impeded by heavy rain of last few days. *Dalua* rice ripening. Prices stationary.
CHOTA NAGPUR.				
South-West Frontier Agency.				
CHOTA NAGPUR DIVN.	42	Hazaribagh May, 6, '93	0·83	Weather—seasonable. Sugarcane doing well. Prospects of mango fair. Cattle-disease in some thanas. Common rice selling at from 11 to 14 seers per rupee. Fodder and water sufficient.
	43	Lohardaga „ 6, '93	1·59	Weather—cool with occasional storms of rain. Ploughing going on. Sowing of *gora* paddy has commenced.
	44	Palamau „ 5, '93	Nil	Weather—seasonable: great heat. *Rabi* harvest being completed. *Mahua* crop good. Rice selling at from 13¼ to 15 seers per rupee. No deficiency of fodder or water.
	45	Singhbhum „ 6, '93	0·96	A week of storms and rain and very cool weather. The *mahua* harvest is over, and the outturn has been about 12 annas. No cattle-disease reported. Water and fodder plentiful. Common rice selling at 12 seers per rupee.
	46	Manbhum „ 6, '93 Gobindpur ...	0·78 0·50	Weather—cloudy and stormy. Weather extraordinarily cool for the time of year. The *mahua* crop on the whole has been a good one. Sugarcane doing well. Rice 10 to 13 seers per rupee. Fodder and water-supply sufficient.

STATISTICAL DEPARTMENT,
The 8th May, 1893.

H. H. RISLEY,
Secy. to the Govt. of Bengal.

Abstract of the results of Meteorological Observations taken at the Alipore Observatory in the month of April 1893.

	Inches.	Date.	Hour.
The mean pressure of the month	29·740		
The average pressure of April from 24 years' registers ...	29·752		
The highest pressure in the month	29·960	11th	10
The lowest pressure in the month	29·493	30th	16
The range of pressure	0·467		
	Hours.		
The total number of hours of bright sunshine during the month	254·3		
The maximum possible number of hours of sunshine ...	378·9		
	°		
The mean temperature of the month	83·6		
The average temperature of April from 24 years' registers ...	84·7		
The highest temperature in the month	96·5	18th.	
The lowest temperature in the month	69·7	23rd.	
The range of temperature during the month	26·8		
The mean daily range of temperature	17·2		
The greatest range of temperature in one day	21·6	23rd.	
	Per cent.		
The mean humidity of the month	75		
The average humidity of April from 24 years' registers ...	69		
	Inches.		
The mean vapour tension of the month	0·855		
The average vapour tension of April from 9 years' registers ...	0·861		
The mean cloud proportion of the month	3·36		
The average cloud proportion of April from 16 years' registers ...	2·68		
The total rainfall of the month	0·17		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	0·17		
The average fall of April from 48 years' registers ...	2·81		
The greatest fall in 24 hours	0·10	28th.	
	Days.		
The number of rainy days in the month	4		
The average number of rainy days in April from 24 years' registers	8		
	°		
The mean maximum equilibrium temperature of solar radiation during the month	149·1		
The mean difference of sun and air temperatures	56·8		
The greatest sun temperature	157·9	22nd.	
The greatest excess of sun over air temperature	61·9	25th.	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	70·6		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	4·6		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	6·7	23rd.	
	Miles.		
The mean movement of the wind per day	135·9		
The greatest movement of the wind in one day	261·0	9th.	
The greatest movement of the wind in one hour	19·0	28th, 3 to 4 P.M.	

The number of hours with winds from each of the 8 points—

N. 2, N.E. 14, E. 22, S.E. 82, S. 322, S.W. 208, W. 4, N.W. 4, Calm 62.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park Street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore ·003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 0·2 lower; and, finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0·6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

J. H. Gilliland,

For Meteorological Reporter to the Govt. of India.

Meteorological Office, India;
Calcutta, the 8th May 1893.

Meteorological Report of the Province of Bengal

* Mean of 6 days.

Explanation.—*Summary.*—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period. The *humidity* of the atmosphere is expressed as percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 01 rainfall the normal mean are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station district, *i.e.*, from total rainfall at the subdivisional stations in the district sending in returns divided by the number of stations. A rainy day is one of

for the week ending Saturday, the 6th of May 1893.

Explanation.—... indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the 9th May* 1893.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 6TH MAY 1893.

UNSETTLED weather, with local showers more or less heavy, has prevailed in most districts during the past week. The heavier rainfall has been irregularly distributed except in East and North Bengal, where it has been of almost daily occurrence. This rainfall appears to be due to the continuance for many days of the easterly winds, which were caused in the early part of the week by the low pressure over the western districts, and latterly by the unusual way in which the pressure recovered from the large defect which then prevailed. On the 1st of May it began to rise in North Bengal, and from there a wave of rising pressure spread towards the south-west. The rise was rapid on the 2nd in all the western districts of Bengal and as far south as Ganjam. On the 3rd the most rapid rise was in the Circars, while over the west of the Bay the increase was from brisk to rapid. In consequence of these changes the area of lowest pressure retreated southwards, and as gradients were moderately steep and ran from south-east to north-west, the circulation of winds was everywhere easterly. During the latter part of the week a fall set in from the west, and the low pressure area continued to the south-west of the province till the last day of the week, when it was shown over Lower Bengal. Westerly winds then prevailed as far north as Hazaribagh, and it seemed likely that more settled conditions were in rear of the depression. On Thursday the 4th the heaviest rainfall was in South-West Bengal, on the 5th it was light and scattered, and on the 6th, the last day of the week, it was most heavy in East Bengal.

Pressure.—The mean readings for the whole week differ very little from the normal, but the changes have been fairly large. At the beginning of the week there was defect everywhere, varying from ·1″ in the eastern districts to ·17″ in the west of Bihar. The rise that commenced on the 1st in North Bengal and spread southwards and westwards continued till the 4th, when the distribution was above the normal by about ·05″. The fall which then set in continued till the end of the week, when readings were relatively to the normal lowest in East Bengal and Assam.

Temperature—Has again been several degrees below the normal. At first the lowest readings were in East Bengal, where defect was more than 5,° while in the other districts it was about 3° except in Orissa, where there was a small excess. Large irregular changes followed the thunderstorms, and by the middle of the week the lowest temperatures were in Chota Nagpur. The defect there increased, and very low readings became general in all the western districts. The weekly means for the larger divisions are all below the normal by amounts varying from 1·1° in Orissa to 5·3° in Chota Nagpur. The defect in Bihar and South-West Bengal is about 3·5.° and in the eastern districts 2·5.°

Rainfall.—Scattered showers have fallen throughout the week, but in some districts, especially on Saturday, the 30th April, and Thursday, the 4th of May, the falls were much more general and more heavy. The days when the rainfall was most scattered were Tuesday the 2nd and Saturday the 6th in all districts The mean falls for the large divisions are all very much above the normal for the week, and excess varies from ·42 inch in Chota Nagpur to 3·95 inches in East Bengal. If the actual falls be expressed as a percentage of the normal, the numbers are—South Bihar 525, Orissa 300, Chota Nagpur and North Bihar 250, East Bengal 273, North Bengal 186, and South-West Bengal 158.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 6th of April 1893:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 1st April 1893.

The total fall from 1st January to 29th April 1893	7·02
The average fall of the corresponding period for 24 years, S.-G.'s Office ...	4·71

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h, 10h, 16h and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; d, drizzling rain; p, passing temporary showers.

J. H. GILLILAND,

CONTENTS.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 13th May 1893.

	No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.				
Burdwan Divn.	1	Burdwan May 13, '93 Kalna ... Katwa ... Raniganj ...	3·39 Not received. 2·45 4·59	Weather—hot in day, cool at night. Ploughing going on. Sugarcane being transplanted. Prices of common rice— Srs. Burdwan ... ... 10 to 13 } per rupee. Katwa ... ... 13 } per rupee. Raniganj ... ... 13 } per rupee.
	2	Bankura „ 13, '93 Vishnupur ...	5·69 0·76	Weather—unsettled and generally cloudy; sky still overcast. The heavy rainfall of the week with hail has done some damage to *til* and mango crops. Fodder and water sufficient. Condition of cattle good. No change in prices.
	3	Birbhum „ 13, '93 Rampur Hát ...	0·99 0·78	Weather—fine and clear. Planting of sugarcane commenced. Ploughing going on briskly. Price of common rice 12 to 14½ seers per rupee.
	4	Midnapore „ 13, '93	1·91	Weather—unsettled; rainfall over 2" in Garhbeta and Contai and nearly 5" in Tamluk. Ploughing and sowing of early rice going on. Prices of common rice— Srs. Sadar ... ... 11 } per rupee. Contai ... ... 14 } per rupee. Tamluk ... ... 12 } per rupee. Garhbeta ... ... 11 } per rupee.
	5	Hooghly „ 13, '93 Serampore ... Jahanabad ...	0·73 1·83 1·63	Weather—variable and stormy; disproportionately little rain at the Sadar. Sowing of winter rice was temporarily stopped in Jahanabad by the heavy rain; elsewhere cultivation has been much facilitated and prospects are so far good. There is less cattle-disease. The difficulty about water in Pandua is less since the rain. Prices of common rice— Srs. Sadar ... ... 10 to 11 } per rupee. Serampore ... ... 10 to 11½ } per rupee. Jahanabad ... ... 11 to 12¼ } per rupee.
	6	Howrah „ 13, '93 Ulubaria ...	2·77 2·94	Weather—cool for the time of year. Sowing of jute and paddy continues. Condition of cattle good. Fodder and water-supply sufficient. Price of rice 10 to 11½ seers per rupee.
Presidency Divn.	7	24-Parganas „ 13, '93	2·61	Weather—hot and occasionally cloudy. Sowing of *aus* and jute commenced. Sufficient fodder and water. Prices of rice:— Srs. C. Sadarkpore ... ... 10 to 13 8 } per rupee. Barrac ... ... 11 12 } per rupee. Dum-Dum ... ... 11 10 } per rupee. Barasat ... ... 10 9 } per rupee. Diamond Harbour ... 12 4 } per rupee.
	8	Nadia „ 13 '93 Kushtia ... Meherpur ... Chuadanga ... Ranaghat ...	1·52 0·89 1·43 1·24 2·12	Weather—cool for the time of year. Sowing of paddy going on. Prices stationary. Fodder and water sufficient.
	9	Khulna „ 13, '93 Bagerhat ... Satkhira ...	0·97 3·41 2·03	Weather—stormy in the early part of the week, since bright and hot. Land is being prepared for *aman* and *aus* and jute are being sown. Sowings retarded in Satkhira by excessive rain. *Boro* harvest continues. Common rice sells at Sadar and Bagerhat 13 seers per rupee and at Satkhira 10 seers 10 chitaks per rupee. Fodder and water for cattle sufficient.
	10	Jessore „ 13, '93 Jhenida ... Magura ... Narail ... Bangaon ...	2·50 2·78 1·96 1·47 1 20	Weather—cloudy and rainy with occasional storms. Sowings in low lands have been retarded by the heavy rainfall of the week. No more rain is wanted for the present. *Til* and jute promising. Cattle-disease reported from parts of Bangaon and Magura. Fodder and water sufficient except in parts in thana Sarsha.
	11	Murshidabad „ 13, '93	1·13	Weather—seasonable. Prospects of mulberry, indigo and sugarcane good. *Aus* and *aman* paddy being sown. Fodder available for cattle. Common rice sells at 12 seers per rupee.

No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concld.*				
Chittagong Divn.				
12	Chittagong	May 13, '93	1·51	Weather—seasonable. Prospects of crops good. *Aus* cultivation going on Prices stationary. Condition of cattle generally good. Supply of fodder sufficient.
13	Noakhali	" 13, '93	0·39	Weather—hot with occasional rain. *Rabi* crops on the ground greatly damaged. Sowing of *aus* recommenced after the late heavy rain. No cattle-disease. Fodder and water ample. Price of rice shows a slight tendency to rise.
14	Tippera	" 13, '93	1·95	Weather—hot with bright sun, alternating with cool stormy weather and rain. State of standing crops fair. Harvesting of *boro dhan* almost completed. Crops on low lands damaged by late heavy rain. Prices of rice unusually high.
15	Chittagong Hill Tracts.	" 12, '23	5·97	Weather—cloudy and rainy in the first part of the week; sunny in the latter part. Vegetables doing well. *Jum* burning having been retarded by early fall of rain is not yet over. Paddy, cotton and other seed grains are being sown in *jums* in some places. No cattle-disease reported. Common rice being sold at 10 seers per rupee.
Dacca Divn.				
16	Dacca	" 13, '93	1·04	Weather—seasonable. Harvesting of *cheena*, *kaon* and *boro* paddy nearly completed. Jute and rice plants doing well, but are being slightly damaged owing to heavy rainfall. Sowing and ploughing going on. The recent heavy rain interfered with cultivation of low-lying lands to some extent. Fodder available. No cattle-disease. Common rice selling at from 10 to 12 seers per rupee.
17	Faridpur	" 13 '93	0·73	Weather—seasonable. Crops sown doing well generally. The late heavy rain has prevented sowing, but the high lands will probably all be sown, whereas perhaps one-third of the low lands will not be sown at all. Some damage has also been done to the young paddy in places by the rain, and considerable harm done to the *til*. Common rice sells at from 11 to 12 seers per rupee. Some cattle-disease still in two thanas; otherwise cattle doing well and fodder available.
	Goalundo	...	0·42	
	Madaripur	...	2·41	
18	Backergunge	" 13, '93	2·72	Weather—cool. Thunderstorm with heavy rain in places. Prospects fair. The heavy rain has damaged the *aus* plants to some extent on low-lying lands. Cultivation has been but little interfered with. Common rice selling at from 9 to 13 seers per rupee. Fodder and water sufficient.
	Pirojpur	...	3·73	
	Patuakhali	...	1·80	
	Bhola	...	2·09	
19	Mymensingh	" 13, '93	1·59	Weather—fairly cool and cloudy for the greater portion of the week. Heavy rain all over the district State and prospects of crops good. The recent heavy rain as far as has been ascertained has not interfered with the cultivation of low-lying rice lands. Common rice selling at from 11 to 14 seers per rupee. Health of cattle good. Supply of water and fodder sufficient.
Rajshahi Divn.				
20	Dinajpur	" 13, '93	0·85	Weather—hot and occasionally cloudy. Standing crops doing well. Sugarcane has been sown to the extent of 16 annas. No more rain wanted for a few days. Prices of rice both at Sadar and Thakurgaon continue unchanged. Condition of cattle good. Fodder and drinking water sufficient.
	Thakurgaon	...	0·06	
21	Rajshahi	" 13, '93	1·11	Weather—showery and hot. Prospects of all standing crops good. The rain, which has been heavy for the time of the year, has not done any appreciable harm. There is no cattle-disease. Fodder and water are plentiful. Price of rice varies from 11 to 14 seers per rupee.
	Nator	...	1·57	
	Nauguon	...	3·30	
22	Rangpur	" 13, '93	0·52	Weather—fine and warm. *Aus* paddy and jute doing well. Common rice 11 to 13 seers per rupee.
	Gaibanda	...	2·25	
	Nilphamari	...	Nil	
	Kurigram	...	0·50	
	Ulipur	...	0·86	
	Govindganj	...	5·57	
23	Bogra	" 13, '93	3·43	Weather—unsettled. Sowing of *aus* and jute going on. Some slight damage is said to have been done to standing crops by heavy rain. General prospects good. Fodder and water sufficient.
	Sherpur	...	3·70	
	Nowkhila	...	5·01	
24	Pabna	" 13, '93	0·91	Weather—seasonable with rain almost every day. The incessant rain has retarded sowings on low lands and made weeding of grass difficult on high lands. Price of rice at Sirajganj Rs. 3-12 to Rs. 5-8 per maund, and at Pabna 12 seers per rupee. Water-supply and fodder sufficient.
25	Darjeeling	" 13, '93	1·14	Weather—fine and clear mornings; in afternoons sky cloudy and occasional showers. *In the hills* :—Barley and wheat in some places being harvested. Potatoes, *kangni*, *bhadoi*, *marua* and *bhutta* progressing favourably. *In the terai* :—Jute and *bhadoi* coming up. Prices of coarse rice— Srs. Hills ... ... 10 } per rupee. Terai ... ... 12 }
	Siliguri	...	2·29	
26	Jalpaiguri	" 13, '93	0·97	Weather—hot. The fair weather during the week improved the condition of jute and sowing of *bhadoi*. Common rice sells at 13 seers per rupee. Fodder and water-supply good.

	No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR.				
BHAGALPUR DIVN.	27	Monghyr May 13, '93 Begusarai ... Jamui ...	0·34 2·14 1·88	Weather—cool for the time of the year. The recent rain has been beneficial to sugarcane and indigo. *Rabi* and *cheena* doing well. Land is being prepared for paddy and *bhadoi*. No cattle-disease. Water-supply and fodder sufficient. Prices of common rice:— Srs. Sadar ... ... 13½ to 16 } per rupee. Begusarai ... ... 14 } per rupee. Jamui ... ... 12½ } per rupee.
	28	Bhagalpur „ 13, '93 Banka ... Madhipura ... Supaul ...	0·64 1·93 0·50 0·25	Weather—more settled, with hotter sun towards the end of the week. The light rain which has fallen in the north has done good to the *bhadoi* rice and *marua* seedlings. Indigo, sugarcane, and *boro* paddy have also been benefitted by the rainfall. Severe hail-storms in Banka caused some loss of life among the cattle. Common rice 14½ seers per rupee.
	29	Purnea „ 13, '93	0·76	Weather—still somewhat cloudy and cold for the season. Crop prospects generally good. Prices stationary.
	30	Malda „ 13, '93 Chanchal ... Shibganj ... Gazole ...	1·20 0 91 4·69 0·25	Weather—again getting hot; occasionally cloudy. Harvesting of *boro* rice has begun; outturn expected to be not less than 14 annas. *Bhadoi*, indigo and jute thriving well. Mango crop has been damaged 6 annas in Kaliachuk thana by heavy rain and stormy wind. Price of coarse rice varies from 11 to 15 seers per rupee. Supply of fodder and water ample.
	31	Sonthal Parganas „ 13, 93 Godda ... Jamtara ... Pakur ... Rajmahal ...	2·35 2·47 1·53 5·00 0·78	Weather—cloudy and cool with thunder-storms and showers. *Boro* paddy and sugarcane doing well. Ploughing well forward. Price of rice from 8 seers (Rajmahal 8 to 11) to 13 seers per rupee. Fodder and water sufficient.
PATNA DIVISION.	32	Patna „ 13, '93 Barh ... Dinapore ...	0·07 3·29 0·77	Weather—cooler for the season. The rain has benefitted the sugarcane and *cheena* crops, but has done much damage to the *rabi* crops stored in threshing-floors. Prices of common rice— Srs. Patna ... ... 15½ } per rupee. Barh ... ... 16¾ } per rupee. Dinapore ... ... 15 } per rupee.
	33	Gaya „ 13, '93 Nawada ... Jehanabad ... Aurangabad ...	1·02 0 92 2·09 0·96	Weather—clear, except at the very beginning of the week, but clouds still about. Sugarcane doing well. Prices as before. Fodder and water-supply sufficient.
	34	Shahabad „ 13, '93 Buxar ... Bhabhua ... Sasaram ...	0·49 1·13 0·97 1·40	Temperature much below normal: cool east winds prevail. Sugarcane has benefited by the recent rain and is promising. Mango crop very poor. Water and fodder abundant. Prices stationary.
	35	Darbhanga „ 13, '93 Samastipur ... Madhubani ...	0·93 1·42 1·88	Weather—occasionally cloudy with east wind: very unusual for this time of year. The late rain has greatly benefitted paddy, *cheena* and indigo crops, and also facilitated the ploughing for *bhadoi* sowings. Prices almost stationary. Fodder and water for cattle sufficient.
	36	Muzaffarpur „ 13, '93 Sitamarhi ... Hajipur ...	1·06 0·49 Not received.	Weather—unseasonable; occasionally cloudy and showery. The rain has damaged the *rabi* lying in the threshing-floors. Threshing is, however, going on. Paddy, *cheena*, *mung*, *kado*, and *sawan* being sown in low lands. Mango prospects favourably reported from the Sitamarhi subdivision. No cattle-disease. Fodder and water sufficient.

	No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR—*concld.*				
Patna Division—*concld.*	37	Saran May, 13, '93 Siwan .. Gopalganj ..	0·03 1·17 1·02	Weather—cool and cloudy; east wind. Heavy local showers in the interior reported. Crops on the ground doing well. Prices of common rice :— Srs. c. Chapra ... ... 13 5 } Siwan ... ... 12 8 } per rupee. Gopalganj ... ... 13 7 } Fodder and water ample.
	38	Champaran „ 13, '93	0·86	Weather—cool for the season. Prospects of indigo and food-crops good. Opium weighments at Ekderi going on. Fodder and water plentiful.
ORISSA.				
Orissa Divn.	39	Cuttack „ 13, '93	3·99	Weather—unsettled with thunderstorms. Reaping of *dalua* rice nearly over. Supply of fodder and water sufficient. Price of rice stationary.
	40	Puri „ 11, '93 Khurda ...	2·30 3·65	Weather—cloudy with rain at intervals. Lands are being cultivated for the ensuing *sarad* crop. Miscellaneous crops doing well. Common rice sells at from 14 seers 7 chitaks to 17 seers 1 chitak per rupee.
	41	Balasore „ 13, '93	2·19	Weather—still cool and stormy. Ploughing continues. *Dalua* rice crop being harvested. Prices stationary.
CHOTA NAGPUR.				
South-West Frontier Agency.				
Chota Nagpur Divn.	42	Hazaribagh May, 13, '93 Giridi ...	1·37 3·06	Weather—rather unsettled and unusually cool. Sugarcane doing well. Mango prospects moderate. Ploughing in progress. Fodder and water sufficient. Prices of common rice :— Srs. Head-quarters ... ... 10 to 14 } Giridi ... ... 8 to 12 } per rupee.
	43	Lohardaga „ 13, '93	0·37	Weather—cool. Ploughing going on. *Don, gora dhan,* and *goondli* being sown.
	44	Palamau „ 12, '93	0·02	Weather—seasonable, but temperature below the normal. A little rain in some parts. *Rabi* harvest nearly completed. Cattle-disease in parts. Common rice sells at from 11 to 14¼ seers per rupee. Fodder and water sufficient.
	45	Singhbhum „ 13, '93	1·50	Another week of storms and rain and very cool weather. *Boro dhan* and cotton doing well. Land being ploughed for *bhadoi* sowing. Price of common rice 12 seers per rupee in Chaibassa market. Cattle-disease reported from Kolhan.
	46	Manbhum „ 13, '93 Gobindpur ...	0·95 2·55	Weather—still very stormy and cool. Prospects so far fair. Price of rice 10 to 13 seers per rupee. Fodder and water-supply sufficient.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF APRIL 1893.

DURING the early part of April there was very little worthy of remark in the general weather conditions beyond the continued low temperatures, especially during the day, when compared with the averages for past years. Pressure distribution never differed very largely from the normal, and underwent the ordinary small oscillations usual in settled weather. On one or two occasions between the 1st and the 15th, weather became slightly disturbed owing to the passage of shallow depressions across the Province, but the rain, which fell at these times, was very local and chiefly confined to the northern districts. These periods of slight disturbance were from the 5th to the 7th, when rain fell in North Bengal and parts of South-West and East Bengal, and again on the 10th and 11th, when, as before, practically no rain fell in Orissa, Chota Nagpur and Bihar, but showers were well distributed in the other districts. During this early part of the month day readings of the thermometers were steadily below the normal by several degrees, while at night, though the air was cooler than usual, the difference was usually much smaller than by day.

After the 15th, until towards the end of the month, fine cloudless weather prevailed, but the pressure distribution underwent considerable modification, and there resulted an arrangement which in all probability intensified the disturbance which afterwards became general over the province and continued for some time. Temperature rose above the normal both by day and night, but the excess in minimum readings was considerably the greater, and the wind circulation underwent a change, which became an important feature of the weather condition for days afterwards. Owing to the low pressure in Central India, the area of lowest readings in Bengal was in the south-west corner, and the wind circulation due to this arrangement became easterly in all districts.

About the 23rd a depression formed in the north-west of India, and began moving in an easterly direction, while on the 25th a small cyclonic storm developed in the Andaman Sea, and moving over Burmah caused stormy weather in the east of the Bay and heavy rainfall in Burmah. The centre of the cyclonic disturbance passed over Rangoon on the 27th, and on that day the depression from the north-west was beginning to affect the weather in the extreme west of the Province. On the following day there was a rapid rise of pressure in the east of the Bay and a rapid fall in the western districts of Bengal, so that gradients from being very slight in the north of the Bay, became in a short time much steeper than is usual at the end of April. In consequence of these steeper gradients strong moisture-laden winds blew in all districts and general rain fell, except in Orissa and part of South-West Bengal, up till the end of the month.

Pressure.—Though the mean pressures for the month differ from the normal by a few thousandths of an inch only, large changes have occurred at times, and the distribution has been considerably above and below the normal. During the first half of the month readings were steadily in excess, the greatest difference occuring on the 10th and 11th, when it was more than ·2 inch in the north of the Province, and somewhat less eleswhere. After the 11th pressure steadily fell. By the 15th the distribution was practically normal, and by the 18th there was defect ranging from ·1 inch in Orissa to ·2 inch in Assam. These relatively low readings continued till the 23rd, when a rapid rise was general, and the distribution was again above the normal; but from the 25th large oscillations were caused by the two disturbances, one in the east of the Bay, and the other in the western districts of Bengal.

The changes on the 27th, when the storm was passing over Lower Burmah, varied from a rise of ·05 inch in the west of Bihar to a fall of ·176 inch at Rangoon; and on the 28th, when pressure was rising in Burmah, changes varied from a rise of ·157 inch at Rangoon to a fall of ·177 inch at Arrah. Defect then ranged from ·13 inch in the south of the Bay to ·25 inch at Dehri.

Temperature—Was generally below the normal during the early part of the month. The difference from the normal by day was greater than by night, and even when, towards the middle of the month, a general rise prevailed, the day readings continued relatively lower. During the last week unsettled conditions prevailed with numerous thunderstorms in all districts, and cool weather again became general. The means for the larger divisions are all below the normal. Defect is under 1° in Bihar only, and in the other divisions varies from 1·6° in Assam to 2·4° in Chota Nagpur.

Rainfall.—As stated above, scattered showers fell about the 5th, and again on the 10th and 11th, after which there was very little rain till the 22nd, when the unsettled weather, which prevailed during the last week, commenced. During the first week rainfall was practically normal, during the second and third it was much below the normal; but the heavy falls during the last week brought up the total fall for the month to above the normal in all districts except Orissa. The largest excess was 2·74 inches in North Bengal. In East Bengal excess was 1·99 inches, in North Bihar ·85 inch, South Bihar ·59 inch, South-west Bengal ·32 inch, and Chota Nagpur ·23 inch. The heaviest falls were at Gnatong, Sibsagar, Silchar, Faridpur, Dhubri, Rangpur, Mymensingh, Noakhali, and Dacca, all of which places received more than 5 inches.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the month of April 1893:—

Meteorological Divisions.	Temperature.						Rainfall.							
	Highest observed during month.	Lowest observed during month.	Averages for month.			Average mean of month above or below normal mean of month.	Of month.			Rainy days.			Since 1st April 1893.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in month.	Normal average number in month.	Variation.	Average.	Normal average.

* Means of 5 days. | † Mean of 6 days.

Explanation.—*Summary.*—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 01 rainfall the normal mean are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station district, *i.e.*, from total rainfall at the subdivisional stations in the district sending in returns divided by the number of stations. A rainy day is one of

for the week ending Saturday, the 13th of May 1893.

Explanation.—... indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the* 16*th May* 1893.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 13TH MAY 1893.

AFTER a very short period of more settled weather at the end of the previous week, the approach of a depression from the west had begun to cause easterly winds in all districts and numerous thunder showers in the western half of the province.

This unsettled weather was most pronounced on the first day of the week under review, that is, on Sunday the 7th, when following a very rapid fall of pressure in the western districts, thunderstorms became more than usually numerous and severe. The severity of these storms, apart from the strength of the wind, of which there is no record for the short interval the storm lasts, was shown partly by the heavy rain, but more by the occurrence of hail. The fall of hail during a thunderstorm is a not unusual feature in the cooler month of March, but it is very unusual in May when, owing to the high temperature of the air, the hail is melted probably long before reaching the ground. The rapid fall of pressure on the 7th was followed by an even more rapid rise on the 8th. The low pressure area over Bengal completely disappeared, but as the rise commenced in the north and spread southwards, the area of lowest pressure retreated southwards. In consequence of this southward displacement of the area of lowest pressure, the easterly circulation of winds continued, and though pressure in Bengal was soon very much above the normal, thunderstorms with rain continued to occur not unfrequently over almost the whole of Bengal. A further consequence of the rapid rise of pressure was the great uniformity in the distribution not only over Bengal, but also in the Bay. Winds became very light, the skies were clearer and temperature began to rise steadily. The large defect in temperature which followed the heavy rainfall in the western districts underwent very little change till the middle of the week. During the last three days it diminished considerably, and by the end of the week was under 2° at nearly all stations except in Chota Nagpur and Orissa, while in the eastern districts and Assam there was excess of about 2.°

Pressure—Fell rapidly on the 7th, rose rapidly on the 8th, and more slowly on the 9th, when there was excess varying from ·05 inch in the east of the province to nearly ·2 inch in the west of Bihar. A fall then set in and continued till the 12th. The distribution resulting from these changes was practically normal. At the end of the week it was again rising. Mean pressure for the week is consequently considerably above the normal.

Temperature—Was unusually low at the beginning of the week, especially in the western districts. On the 8th defect was over 10° in South Bihar and part of South-West Bengal, and was between 5° and 10° in almost all the other districts. These low temperatures continued for some days, but during the latter half of the week the difference from the normal was steadily diminishing in the west of the province, while in East Bengal, North Bengal and Assam, readings had become one or two degrees in excess. The means for the large divisions are all much below the normal except for Assam. Defect varies from 2°·6 in East Bengal to 6° in Chota Nagpur and South Bihar.

Rainfall.—In the early part of the week rainfall was general and heavy in the western districts, and scattered showers fell in all districts practically throughout the week. The average falls in Orissa, South-West Bengal, Chota Nagpur, and South Bihar are all much above the normal, while in North Bihar, North Bengal and East Bengal, there is a considerable defect. Weather in these last three districts was not so disturbed, while the depression existed over the west of the province on the first day of the week, and owing to the rapid rise of pressure in the north, the eastward motion of the low pressure area was checked, and the rainfall became more scattered.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 13th of May 1893:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week. Of highest of each day.	Averages for week. Of lowest of each day.	Averages for week. Of mean for each day. The total fall from 1st January to 13th May 1893	12·17
The average fall of the corresponding period for 24 years, Surveyor-General's Office	6·56

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h, 10h, 16h and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; p, passing temporary showers; t, thunder; l, lightning; K, thunderstorm; ▲, hail; lr, lightning reflection; ⌓, dew; d, drizzling rain.

* Includes 618 tons and 187 tons of coal during 1893 and 1892, respectively, carried for Revenue, for which no "Up" and "Down" register maintained.

† Railway plant and rolling-stock 143 tons and 125 tons for the years 1893 and 1892, respectively, for which no "Up" and "Down" register maintained.

Comparative Statement of principal commodities carried on the Bengal Central Railway during the month of February 1893.

DECREASES.

	Tons.
Rice	732

Market not brisk enough to attract despatches by rail.

The increases and decreases in all other commodities are due to ordinary fluctuation of traffic and call for no special remarks.

JAMES SHAW,
for Examiner of Accounts.

CALCUTTA, *the 11th May* 1893.

* Includes 4,831 tons and 1,179 tons of coal during 1893 and 1892, respectively, carried for Revenue, for which no "Up" and "Down" register maintained.

† Railway plant and rolling-stock, 7,914 tons and 8,957 tons for the years 1893 and 1892, respectively, for which no "Up" and "Down" register maintained.

Comparative Statement of principal commodities carried on the Eastern Bengal State Railway during the month of February 1893.

INCREASES.

	Tons.
Coal	10,173
For railway and Flotilla consumption and for brick burning. Part of the increase is due to Brace Bridge Hall consignments.	
Jute, screwed	2,603
Saidpur, Rangpur, Lalmanir Hát, Postgolah, Mymensingh, and Sirajganj show increases under this head. There was comparatively little jute available in 1892.	
Jute, unscrewed	3,072
The increase was principally in despatches from Domar, Arariya, Goalundo, and Rangpur. The crop of 1892 was larger than that of 1891.	
Kerosine oil	8,365
Due to prohibition of carriage by boats within certain limits of the port of Calcutta.	
Hay, straw and wooloo	981
The increase was in bookings from Bansra, Canning, Diamond Harbour, and other stations on the Southern Section.	
Tea	1,061
Increased production.	

DECREASES.

	Tons.
Rice	3,779
The chief decrease was in despatches from Sara, Goalundo, and Nowabganj. The abnormal demand which existed in 1892 accounts for this fluctuation.	
Oil-seeds	2,293
Goalundo shows a very large decrease under this head. The falling off is said to be due to short crop. It is also partly due to the competition of the river steamers.	

CALCUTTA, *the* 12*th May* 1893.

JAILS.

Calcutta, the 20th May 1893.

READ—

The Report on the Administration of the Jail Department for the year 1892.

Read also—

The Reports for the years 1890 and 1891, and the orders of Government recorded thereon.

DR. LETHBRIDGE held the office of Inspector-General of Jails until the 28th March, the date of his appointment as Superintendent of Thuggee and Dacoity Operations. He was then relieved by Surgeon-Major D. W. D. Comins, who was in charge of the department during the remainder of the year.

Judicial statistics.

2. The number of Central, District, Intermediate and Subsidiary Jails remained unchanged during the year. The following table shows the number of prisoners of all classes confined in the jails and subsidiary jails of the province in the last ten years.

	1883.	1884.	1885.	1886.	1887.	1888.	1889.	1890.	1891.	1892.
Number of prisoners of all classes in jails and subsidiary jails on the last day of previous year	15,593	14,718	15,354	15,076	14,629	13,210	13,985	15,048	15,211	16,609*
Total number admitted during the year	74,643	80,852	80,853	77,966	75,664	81,136	84,639	80,959	87,925	95,523
Total ...	90,238	95,570	96,207	93,042	90,293	94,346	98,624	96,007	103,136	112,132
Total discharged ...	75,520	80,216	81,131	78,413	77,083	80,361	83,576	80,800	86,546	94,339
Balance at the end of the year	14,718	15,354	15,076	14,629	13,210	13,985	15,048	15,207	16,590	17,793
Daily average of all classes ...	15,026	15,101	15,177	14,806	12,250	13,731	15,026	14,777	15,916	17,180

* The 19 prisoners (15 male convicts and 3 male and 1 female under-trial) who remained at the Deoghur Magistrate's hajat on the 31st December 1891, before it was converted into a subsidiary jail, were not accounted for in the statistics for 1891.

From these figures it appears that the number of admissions during the year, as well as the number of prisoners remaining in custody at its close, was larger than in any other of the past ten years. The daily average population has risen from 15,916 in 1891 to 17,180 in 1892, and this is almost entirely due to the increase in the number of male convicts admitted. On the other hand there was a satisfactory decrease in the daily average of under-trial prisoners present in jails, the number having fallen from 1,339 in 1891 to 1,240 in 1892.

Of the 46 Central, District and Intermediate Jails, and their affiliated Subsidiary Jails (or Lock-ups), 30 show an increase in the total number of direct admissions. This is attributed to the scarcity that prevailed in these districts, and to the rise in the price of grain, which led to the commission of a large number of thefts. It is noticed that the districts which show the greatest increase or decrease of crime are as a general rule those which were most or least affected by these causes. The Lieutenant-Governor has no doubt that this is the true explanation of the increase of crime during the year. There was a general rise in food-prices, and the province narrowly escaped a severe scarcity.

Releases.

3. The following table compares the releases under the various heads with the figures for the six previous years:—

	1886.	1887.	1888.	1889.	1890.	1891.	1892.
Released on expiry of sentence	27,125	21,328	26,452	28,754	28,464	28,873	32,543
,, on appeal	1,845	1,903	1,980	1,942	2,038	2,120	2,156
,, under remission rules	1,673	1,017	1,352	1,575	1,622	1,661	1,598
,, on medical grounds	26	28	33	37	39	105	110
,, on other grounds	27	6,184	88	2	9	8	6

Although there was a slight increase in the number of releases on appeal, His Honour notices with satisfaction that the percentage of such releases to total imprisonments has fallen from 6·19 in 1890 and 6·08 in 1891 to 5·59 in 1892, thus justifying the discretion of the Magistrates whose sentences were appealed against. The number of prisoners released on medical grounds has increased from 105 in 1891 to 140 in 1892. Of these, 26 were released under rule 488A of the Jail Code, which authorises the release of prisoners who are likely to die if detained in jail, but have a probability of recovery if released; while 112 were released under rules 487 and 488 which apply to prisoners who are almost certain to die, and who are released, not in the hope that they will recover, but that they may have the comfort of dying at home.

Classification of convicts.

4. Out of the 38,538 convicts admitted direct into jail during the year, 22,901 or 59·43 per cent. were Hindus, 13,762 or 35·71 per cent. were Muhammadans, and 685 or 1·78 per cent. were Christians. The number of juveniles under 16 years of age admitted to jail was 453 or 1·17 per cent. of the total admissions, as compared with 371 or 1·06 per cent. of the total admissions in 1891. The Reformatory Schools at Alipore and Hazaribagh continue to do excellent work. A propoal to amalgamate the two schools and to locate them at Hazaribagh was under consideration during the year, but was finally abandoned, the Lieutenant-Governor deciding that it would be inadvisable to make any change in the existing arrangements.

The proportion of cultivators to other classes of prisoners admitted into jail fell from 63·44 per cent. in 1891 to 61·94 per cent. in 1892. The number of female convicts admitted direct was 1,484, as compared with 1,431 in 1890 and 1,265 in 1891.

Re-convictions.

5. The number of re-convicted prisoners admitted into jail during the year was 3,888 or 10·08 per cent. of total admissions against 3,226 or 9·26 per cent. in 1891. Of this number 2,840 had one previous conviction, 658 had two previous convictions, and 390 had more than two. The Inspector-General attributes the increase to greater accuracy in recording re-convictions. Further progress was made during the year in improving and extending the anthroprometrical system for the identification of habitual offenders. The system promises to be of the greatest value in the future, but so far it has not been found possible to put it to any practical test, and no re-conviction was proved by its help during the year.

Sentences of convicts.

6. Of the 16,648 convicts confined in jail on the 31st December 1892, 8,226 or 49·41 per cent. had sentences not exceeding one year, as compared with 7,993 or 51·80 per cent. on the last day of 1891. The number of prisoners admitted in 1892 with sentences exceeding one year was 4,327 against 3,963 in 1891. The number of sentences of simple imprisonment rose from 2,472 or 7·10 per cent. of the total number of admissions in 1891 to 2,769 or 7·18 per cent. in 1892. Sentences of judicial whipping increased from 1,539 in 1891 to 2,029 in 1892, while the number of boys whipped rose from 458 to 565. The number of punishments of rigorous imprisonment with solitary confinement imposed during the year was 149, against 30 in 1890 and 56 in 1891. Sir Charles Elliott is glad to see that greater use is being made of this form of punishment, which is useful as a deterrent, and is particularly appropriate for certain classes of offences.

Under-trial prisoners.

7. The number of under-trial prisoners admitted during the year was 33,325 as compared with 30,304 in 1891, and the number remaining in jail at the close of the year was 1,071 compared with 1,089 on the last day of 1891. Of the total number thus admitted, including those remaining on the first day of the year, 17,688 or 51·1 per cent. were finally convicted, as against 15,036 or 49·6 per cent. in 1891. It is satisfactory to notice that, in spite of the large increase in the total number of prisoners admitted into the jails of the province in 1892, the number of under-trial prisoners at the close of the year is less than it has been for the three preceding years. The number of escapes among under-trial prisoners has fallen from 33 in 1891 to 8, and of these 3 remained uncaptured at the end of the year.

Detention of under-trial prisoners.

8. There has been a satisfactory improvement in the detention of under-trial prisoners during the year. In Sessions cases the average period for detention for the whole province was 39·70 days, as compared with 49·93 in 1891 and 45·88 in 1890. In Monghyr, Hazaribagh, Khulna and Faridpur the average detention exceeded two months, while in Birbhum and Noakhali it was below 20 days. In trials before Magistrates, the average period of detention for the whole province was 10·77 days as against 13·38 in 1890 and 11·96 in 1891. These figures afford valuable testimony to the improvement, on which the Lieutenant-Governor has so continually insisted, in trying judicial cases with greater promptitude, and His Honour is

glad to believe that the delays in procedure which constitute so serious a blot on the administration of justice have materially diminished in almost all districts. The longest average detention during the past year occurred in Jessore, 17·13 days; Purnea, 15·96 days; Rangpur, 15·31 days; Noakhali, 14·80 days; and Darbhanga, 14·69 days. The Lieutenant-Governor notices that Khulna has again the best record in the province, and that the average period of detention, which in 1891 was only 2·57 days, has reached the remarkably low figure of 0·93 days.

Civil prisoners.

9. There were 71 civil prisoners in confinement on the last day of 1891, and the total number of admissions during the year fell from 1,089 to 873. Of these, 867 were released and 6 were transferred, leaving 71 in jail at the end of the year, the same number as that with which it began.

State prisoners.

10. Four Lushai State prisoners were received into the Alipore Central Jail in May 1892. In July one of these, a man named Nikoalo, murdered one of his companions in the jail. He was committed to the Sessions for trial, but as he was found to be insane, he was remanded to the jail, where he is still under observation. The two remaining Lushais were retransferred to Silchar in August by order of the Government. Two other Lushai Chiefs were confined in the Hazaribagh Jail during the year. One was in jail throughout the year, and the other was received in August 1892. The health of these prisoners is good, and they appear to be comfortable and well looked after.

Jail buildings.

11. Excluding a sum of Rs. 9,960 expended on the Press buildings in the Presidency Jail, and Rs. 4,560 on the Reformatory School at Alipore, the total expenditure on jail works during the year was Rs. 1,56,543 as against Rs. 2,03,705 in 1891. Among the principal works carried out were the construction of a new jail at Palamau at a cost of Rs 12,274, and of four new subsidiary jails at Alipore (Jalpaiguri) Rs. 14,666, Thakurgaon Rs. 14,772, Fenny and Munshiganj, and the re roofing of the workshed of the Buxar Central Jail.

The advisability of the more extensive employment of convict labour on public works was referred to in his report last year by the Inspector-General, who was then in consultation with the Chief Engineer on the subject. It was expected that the number of prisoners thus employed would show a considerable increase during the year; but the expectation has hardly been realised, and the actual increase was only from 974 in 1891 to 997 in 1892.

Guards.

12. In consequence of the raising of the status of the Tippera Intermediate Jail to that of a District Jail, the total strengh of the warder guard has been increased from 1,607 men of all grades in 1891 to 1,620 in 1892. The practice of utilizing the Jail establishment of warders for the purpose of furnishing escorts to prisoners required by Magistrates to be produced before the Courts has been discontinued during the year, and orders have been issued directing that such escorts should in future be supplied by the Police. The Inspector-General mentions the great difficulty frequently experienced by Central Jails in meeting the demands for warders for District and Intermediate Jails, and he fears that, in consequence, the warders sent out from Central Jails were not always sufficiently trained in their jail duties or in drill. It is satisfactory to know that the warders have as a body worked well and cheerfully throughout the year, and this in spite of the high price of food, which pressed somewhat heavily on their means of subsistence, and of the greater responsibility and extra work thrown on them owing to the increase in the jail population and to the number of cases of sickness among the jail staff. Dr. Comins speaks highly of the smartness and efficiency with which many of the warder guards whom he inspected performed their physical exercises and drill movements. At his recent inspection of the Chittagong Jail, the Lieutenant-Governor tested the shooting of the warders at the rifle range, and the results showed that they had had little or no practice in this particular form of drill. His Honour would be glad to see a regular course of practice in firing prescribed, and he considers that in this as well as in ordinary drill the warders should combine with the regular police.

13. There were 34 escapes of convicts as compared with 13 in 1890 and 21 in 1891. Of this number, 2 were from Central Jails, 14 from District Jails, 7 from Intermediate Jails and 11 from Subsidiary Jails. Twenty were recaptured during the year, besides two who had escaped in previous years. On this subject Dr. Comins writes as follows:—

Escapes.

"The causes of the increased number of escapes are to be found in—

(a) The increased population.
(b) The lessened proportion of guards to prisoners.
(c) The increased work devolving on individual warders from more prisoners, as well as increased sickness in this unhealthy year among the warders, and the number from time to time unfit for duty.
(d) The necessity for using less secure enclosures and wards, which with a smaller jail population had been abandoned.
(e) The retention, owing to the fulness of Central Jails, of long-term prisoners for a longer period than usual in District and Subsidiary Jails, where the chances of escape are greater."

These reasons have doubtless much weight, but the increase in the number of escapes is greatly to be regretted, and every endeavour must be made to put a stop to them in future

Only one escape occurred from among the numerous gangs employed by the Public Departments, District Boards, or Municipalities, and that was due to the grossest carelessness on the part of the paid warder in charge of the gang. This is a creditable record considering the risks which unavoidably attend the extra-mural employment of convict prisoners.

14. The total number of offences committed by prisoners during the past year was 34,750 against 26,459 in 1891. The ratio of punishments to the daily average jail population increased from 183·1 in 1891 to 219·4 in 1892. The increase in the number of punishments is to be deplored, but Sir Charles Elliott sees no reason to suppose that any undue severity was shown, and the punishments themselves appear to have been moderate and judicious. As compared with 1891, there was a reduction in the number of cases of punishment by solitary confinement, but the percentage of whipping to the daily average number of male prisoners remained practically unchanged. The following table gives the statistics of punishments during the past seven years.

Prison discipline.

	By criminal courts.	By Jail Officers.					Total punishments.	Ratio per cent. of total punishments to daily average number of prisoners.	Ratio per cent. of corporal punishment to total number of all other punishments inflicted on male prisoners.
		Solitary confinement.	Reduced diet.*	Solitary confinement with reduced diet.	Corporal punishment.	All other punishments.			
	1	2	3	4	5	6	7	8	9
1886	44	2,504	1,015	499	396	36,046	40,504	299·93	1·01
1887	44	1,599	569	251	266	33,095	35,824	328·41	0·76
1888	29	1,295	525	352	245	26,608	29,054	234·71	0·86
1889	40	1,276	563	318	272	22,641	25,110	184·75	1·12
1890	28	1,270	430	134	259	23,576	25,697	191·10	1·04
1891	37	1,276	738	168	291	23,346	26,456	183·10	1·13
1892	44	1,037	972	217	335	32,133	34,738	219·39	0·97

* Including convicts put on penal diet.

"All other punishments" are analysed as follows and are compared with those for 1891:—

	1891.	1892.
Handcuffs	7,629	10,873
Fetters	8,840	11,321
Loss of marks	4,087	4,561
Gunny clothing	1,308	1,833
Penal or hard labour	686	1,161
Loss of early morning meal	345	979
Work in cells	10	9
Reduction and degradation of prison officers	515	652
Shaving the heads, and cutting the hair of female convicts ...	127	67
All other miscellaneous punishments	336	677
Total ...	23,883	32,133

Convict officers and mark remissions.

15. The number of prisoners employed as convict officers during the year was 2,198, of whom 409 were in the highest grade of convict warder. The ratio per cent. of the average number in jail was for male convict officers 5·58 against 5·80 in 1891, and for females 1·56 against 0·37. The Inspector-General reports that, as a general rule, these convict officers have done their work well, and by being employed at night in patrolling duties have afforded some relief to the staff of paid warders whose work has, for reasons already explained, been increased during the year. The number of convict officers punished was 1,783 against 1,580 in 1891. Of the 1,608 prisoners released during the year who were on the mark system, only ten failed to get remission under it.

Expenditure.

16. The following table shows the gross expenditure for jails and subsidiary jails in 1892 and for the nine years preceding:—

	1883.	1884.	1885.	1886.	1887.	1888.	1889.	1890.	1891.	1892.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
General supervision...	45,966	47,018	48,207	49,236	49,198	50,251	49,344	49,890	48,820	51,583
Dieting prisoners ...	3,16,640	3,57,513	3,65,386	3,34,697	2,44,730	2,95,680	3,89,300	3,54,257	3,63,690	4,42,385
Establishment (excluding the police)	4,54,276	4,36,153	4,42,863	4,67,459	4,60,884	4,55,888	4,51,419	4,40,777	4,47,212	4,50,223
Hospital charges ...	40,947	39,227	49,383	42,899	36,008	46,936	56,825	47,766	49,155	47,787

Daily average population of all classes	15,026	15,101	15,176	14,806	12,250	13,731	15,025	14,777	15,915	17,178
	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.
Average expenditure per prisoner ...	68 11 7	69 15 4	73 9 0	73 13 6	79 0 4	77 12 8	79 4 5	76 6 3	73 3 9	74 10 6
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.		Rs.	Rs.
Public Works Department ...	5,07,718	1,09,739	60,657	92,804	1,88,353	2,40,244	2,37,214	1,56,810	2,03,705	1,56,543

The increase under the heads Diet, Clothing, and Contingencies is due to the increase in the jail population from an average of 15,915 in 1891 to 17,178 in 1892. The average cost per prisoner under all heads of expenditure, excluding Public Works, was Rs. 74-10-6, showing an increase of Rs. 1-6-9 over that of last year, but the average is still below that for the four previous years.

Average rates.

17. The average prices paid for the chief articles of diet during the year 1892, as compared with those of previous years, are given below:—

	1887.	1888.	1889.	1890.	1891.	1892.
	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.
Rice	1 12 8	1 14 10	2 7 6	2 2 7	2 1 9	2 9 1
Wheat (flour) ...	3 5 4	3 0 9	3 7 0	2 15 4	3 1 7	3 10 7
Maize	1 7 0	1 10 2	2 1 2	1 12 9	2 0 0	1 13 5
Dal	2 0 8	2 3 2	2 11 0	2 8 4	2 7 8	2 11 9
Meat	6 3 0	6 2 9	6 3 6	6 2 2	6 6 7	6 3 10
Fish	6 14 8	6 9 0	6 7 3	6 11 10	6 4 8	6 7 5
Salt	3 4 8	3 15 0	4 0 1	3 15 2	3 12 6	3 11 0

There was a great rise in the price of all food-grains during the year, with the exception of maize, and the average price of rice rose from Rs. 2-1-9 in 1891 to Rs. 2-9-1 in 1892. In this connection Dr. Comins writes:—

"Had it not been for the timely storage of grain at the cheap season of the year, the cost under head "Diet" would have been very much heavier. There is ample evidence, however, that this has not been taken advantage of to the fullest extent, and there is yet much left to be done before the saving under this head will have reached its utmost limit. The arrangements for these large transactions have been left too much in the hands of jailors, who are timid and fear the responsibility of large bargains, and it is hard to break them of the time-honoured custom of buying in small quantities from the local bunnia at retail prices, and they have many duties which prevent them travelling far afield and of keeping themselves informed of the exact time when, and place where, the best bargain can be made. Much better results have been obtained where the Superintendent has personally enquired into or completed arrangements, or has effectively controlled and encouraged the efforts

of his jailor. Sufficient efforts to ensure a full supply of grain at the cheap season have not been made in all cases, and the cheapest season has been allowed to pass before the bulk of grain has been secured. In other cases, rice has been bought where it would obviously have been cheaper to have bought paddy, the husking and preparing of which would have also afforded good labour to the prisoners. The arrangement which promises to give the best results is that followed by the big grain merchants, who make advances to the zamindars or local cultivators before the grain is harvested, and thus have the first and best of the market."

As a successful example of the economy that can be effected by good management, the Inspector-General instances the case of the Dinajpur Jail, where Dr. R. M. Blaker and Jailor Gopal Chandra Chandra purchased 3,000 maunds of paddy in the Bogra district at a cost, including carriage, considerably less than that paid by the Bogra Jail, and when prices rose were able to dispose of the surplus stock at a profit. In this part of his report Dr. Comins has shown great attention to the question of expenditure on diet, and the means by which it can be kept down. Sir Charles Elliott fully endorses his remarks, which, if they are carefully studied by Jail Superintendents, cannot fail to be productive of useful results in the future.

18. The following table gives the average expenditure per prisoner on diet in each jail compared with that of the previous year :—

JAILS.	1891.	1892.	JAILS.	1891.	1892.
	Rs. A. P.	Rs. A. P.		Rs. A. P.	Rs. A. P.

The great increase in the cost of diet in the Purnea Jail is accounted for partly by the special and extra food given to the prisoners under medical advice, and partly by the high price of rice prevailing in the neighbourhood. Since Dr. Kelly took over the management, great economy has been effected in the cost of diet in the Naya Dumka Jail, which last year, leaving out Darjeeling, was the most expensive jail in the province. In the present year Patna heads the list of cheaply managed jails (as far as the cost of diet is concerned), and this result is in no small measure due to the efforts of the Jailor, Babu Lal Behari Singh, who was noticed in last year's report as the jailor at Gaya, which was the most cheaply managed jail in the province in 1891. Dr. Comins also mentions, as worthy of special commendation, Babu Becharam Gupta, the Assistant Jailor of Manbhum, and Munshi Dallaruddin Ahmed and Babu Ganesh Chunder Singh, Assistant Jailors of Pabna.

Supply of vegetables.

19. The supply of vegetables and condiments grown in the jail gardens was found to be insufficient for the wants of the prisoners, and in 23 jails condiments to the value of Rs. 3,099 had to be purchased, while in 8 jails vegetables were bought to the value of Rs. 973. This was in a great measure due to the unexpected increase in the jail population, but the Inspector-General also attributes it partly to the want of energetic management of the jail gardens. The number of lime-trees grown in jail gardens was 15,525, or nearly one tree for every prisoner confined in the jails of the province.

The total value of articles supplied to prisoners, for which no credit is taken in the account, was Rs. 91,441 against Rs. 72,831 in 1891 and Rs. 53,747 in 1890. The increase is said to be chiefly due to the further development of the jail

dairies, the value of the produce of which is estimated at Rs. 26,312 in 1892 against Rs. 13,784 in 1891. The value of grain grown in jail lands fell from Rs. 7,124 in 1891 to Rs. 5,786 in 1892, the decrease being due to the scanty rainfall of the preceding year.

Establishment.

20. The cost of establishment was Rs. 3,88,293 as against Rs. 3,84,825 in 1891, being an increase of Rs. 3,468. Hospital charges fell from Rs. 48,751 in 1891 to Rs. 47,368 in 1892, the decrease being attributed to the supply of milk (both cheaper and purer than that bought in the bazar) to the sick prisoners from the jail dairies. Clothing charges rose from Rs. 55,444 1891 to Rs. 73,427 in 1892, and this is accounted for by the increase in the jail population during the year. The expenditure on contingencies was Rs. 1,69,793 against Rs. 1,47,722 in 1891.

Average rate of controllable expenditure.

21. The total average cost per prisoner on account of diet, hospital charges, and clothing amounted to Rs. 33-1 against Rs. 29-11-9 in 1891 and Rs. 31-3-5 in 1890. The jails of Manbhum and Malda show the best results. As in former years, Buxar was the cheapest Central Jail in the province.

Employment of prisoners and manufactures.

22. The daily average number of prisoners sentenced to labour was 15,613 against 14,231 in 1891 and 13,241 in 1890. The daily average number of sick increased from 607 in 1891 to 683, while the number of convalescent and infirm fell from 1,285 to 1,243. The number employed on unremunerative labour increased from 729 in 1891 to 985 in 1892. The net cash earnings show a satisfactory increase, the figures being Rs. 3,23,211 for 1892 against Rs. 1,50,842 in 1890, and Rs. 3,14,021 in 1891. The increase in 1891 was mainly due to the working up of the large stock of castor seed at Rajshahi at the end of 1890, and to the realization of heavy outstandings from the Railway Department during the year, and the improvement thus effected was maintained during the year under review. On the subject of the beneficial effects of labour on health the Inspector-General has some interesting remarks to offer. Weak and sickly prisoners who have hitherto been supposed incapable of any kind of labour have been more extensively employed on gardening and other light kinds of work. In his Resolution on the Report on the Administration of the Jails of Bengal for 1891, the Lieutenant-Governor remarked on the health-giving effects of moderate labour in the case of weakly prisoners, and he now notices with satisfaction that the question has received greater attention on the part of Superintendents during the past year, and that the experiments made have resulted in a general improvement in the health of the prisoners so employed and in diminishing the numbers in the special and convalescent gangs.

23. The average earnings per prisoner sentenced to labour in Central Jails as compared with the figures for 1891 is shown below:—

	1891.	1892.
	Rs.	Rs.
Presidency	91·0	115·1
Buxar	36·0	33·2
Alipore	50·5	29·9
Bhagalpur	14·2	23·3
Midnapore	23·9	22·9
Dacca	9·4	8·9
Rajshahi	8·0	Loss.

In the Presidency Jail the profits from jail manufactures rose from Rs. 1,14,602 in 1891 to Rs. 1,50,011 in 1892. Towards this amount the printing industry contributed Rs. 1,47,345, and the work of this department is favourably noticed by the Inspector-General in his report.

In the Alipore Jail profits on manufactures fell from Rs. 91,386 in 1891 to Rs. 55,580; this is accounted for by the abnormally high price of jute during the year. The packing of quinine in 5-grain packets for sale at post-offices was introduced into this jail in the middle of December, and by the end of the month the outturn had risen to 10,000 daily. In the Bhagalpur Jail the profits show a satisfactory increase from Rs. 17,088 in 1891 to Rs. 30,794 in 1892, and the quality of the outturn of articles manufactured is reported to have much

improved. In the Buxar Central Jail there was a slight falling off in the profits on manufacturing operations, while in the Dacca Jail they remained practically unchanged. The Rajshahi Jail compares unfavourably with the other Central Jails of the Province, and the year's operations resulted in a loss of Rs. 3,562-12 principally on the castor-oil manufacture. This is partly accounted for by the deterioration in the value of dead-stock and of other articles improperly shown under that head, amounting to Rs. 4,959-11, which had to be written off. The Inspector-General remarks that the jail is badly situated for the working of an industry of this kind, in which outside competition is so keen, especially as with jail labour the full percentage of oil is not extracted. The profits of minor jails show an increase from Rs. 61,174 in 1891 to Rs. 68,263 in 1892. Darjeeling again heads the list with a profit of Rs. 8,880, or an average of Rs. 10·21 per prisoner sentenced to labour.

Subsidiary Jails.

24. During the year nine out of the 86 subsidiary jails were visited by the Superintendents less than 70 times, the minimum number required.

The number of convicts admitted into the Subsidiary Jails during the year was 17,385 as compared with 15,415 in 1891, the increase being accounted for by the large number of petty thefts following on the general scarcity and the high price of grain. The average detention of convicts was 7·26 days against 7·42 in 1891. In the Alipore (Jalpaiguri), Angul, and Khond Mahal Subsidiary Jails the average detention was over 15 days, in the first case because the prisoners were detained to assist in the construction of the new jail buildings, and in the other cases owing to the difficulties connected with the journey to Cuttack. The Lieutenant-Governor is of opinion that in these places the rules as to detention should be relaxed, as the prisoners might be usefully employed in the Subsidiary Jails in building, cultivation, jungle clearing or any other kind of work. The average detention of under-trial prisoners in Subsidiary Jails for 1892 was 11·30 against 13·55 in 1891. The decrease is all the more satisfactory, as the average number of prisoners admitted into jails was larger than in the preceding year. The total cost of the Subsidiary Jails during the year, excluding Public Works, was Rs. 1,08,994 as compared with Rs. 1,08,963 in 1891. The credits from jail manufactures amounted to Rs. 24,129 against Rs. 20,815.

Water-supply.

25. During the year all the different waters, ordinarily in use in jails, have been analysed by the Chemical Examiner to Government with a view to determining the best source for selection. The principle that all water should be raised by pumps and should be conveyed by means of pipes to the settling tank, boiler and filter, and thence to the different enclosures, has been sanctioned for general application in all Jals and will be gradually introduced as funds are available. In jails where buckets are used instead of pumps, the difficulty hitherto experienced in preventing the pollution of the water before use has been in some measure obviated by altering the shape of the bucket, and by the construction of a funnel-shaped opening in the well. Mr. Larymore's improved boiler for drinking-water has been supplied to several jails during the year, and the scheme for supplying the Arrah jail with water from the Sone Canals has approached completion. All these are very important reforms, and His Honour would be glad to see every jail supplied with such appliances, that water need never be contaminated in handling or carrying. It is of the utmost importance that all water should be really boiled and not merely heated before being used for cooking or drinking.

Accommodation in jails.

26. From statement XV appended to the Report, it appears that the maximum population on any one day considerably exceeded the capacity in many jails. Owing to the large increase in the daily average number of male convicts, and the narrow margin of accommodation allowed, this is often unavoidable. As all the Central Jails were quite full during the year, considerable difficulty was frequently experienced in providing accommodation for prisoners in the sleeping wards. Among the jails in which overcrowding occurred, the Inspector-General especially notices those at Buxar, Dacca, Mymensingh, and Jessore, in which the daily average of male convicts, after deducting the number of sick prisoners in hospital, exceeded by over 50 the capacity of the jails. In such cases the prisoners were allowed to sleep in worksheds specially prepared for them,

or in under-trial wards, or in the case of old and weakly prisoners, in the hospitals, whenever the accommodation permitted. In view of the increasing jail population, the necessity for additional accommodation is very great. A sum of one lakh of rupees has been placed at the disposal of the Inspector-General for original works during the present year, and this will be utilized in increasing the accommodation for prisoners in the jails at Bhagalpur, Barisal, Jessore, Malda and Comilla. In accordance with the recent orders of the Lieutenant-Governor, the surplus population of the jails will, as far as possible, be accommodated in the Central Jails in additional wards to be constructed for this purpose.

Mortality among prisoners.

27. The following table shows the sickness and mortality for 1892, and compares the year's figures with those of the last 30 years.

Years.	Daily average number of prisoners.	Daily average sick.	Ratio per mille of daily sick.	Number of deaths.			Death-rates per mille of average strength.			Remarks.
				From cholera.	From all other causes.	Total number of deaths.	From cholera.	From all other causes.	From all causes.	
1863	16,453	817	51·4	338	1,223	1,561	20·5	74·3	94·8	All classes of prisoners.

Average ...	17,329	733	42·3	152	824	976	8·8	47·5	56·3	

The daily average number of sick prisoners rose from 610 in 1891 to 687, and this is atributed to the increase in the population of the jails and the general unhealthiness of the year. The jails which have returned the highest ratio of daily average sick were Jessore 87·9, Dinajpur 86·2, Singhbhum 85·9, Naya Dumka 85·0, Malda 71·8, and Champaran 67·2. The number of admissions into hospital from dysentery and diarrhœa exceeds by nearly 1,000 the number for 1891, and this the Inspector-General attributes to the fact that a large number of the prisoners who were received into the jail had for months been subsisting on unnutritious and indigestible food. There were 115 cases of cholera with 60 deaths against 81 cases and 48 deaths in the previous year. The number of cases of cerebro-spinal fever fell from 23 to 9, and the deaths from 18 to 6. There were 45 cases of small-pox and 14 deaths compared with seven cases and one death in 1891. Of the 45 cases no less than 41 occurred in the Dacca Jail, and of these 13 proved fatal. All the prisoners in the jail, numbering 3,465, were vaccinated, and in 1,416 cases the first operation proved successful; the rest were revaccinated, 1,303 with successful results. Fourteen prisoners who were attacked with small-pox in the jail were also vaccinated a month after their recovery with the extraordinary result that in six cases the operation was completely successful. Dr. Cobb's account of the results of his experience (paragraph 102 of the Report) is altogether very remarkable, and deserves the careful perusal of the Medical Faculty. The facts will be further considered in the Vaccination Report.

Jails in which the death-rate was highest.

28. The total number of deaths among convicts in jails and subsidiary jails, including the 112 moribund prisoners who were released under rules 487 and 488 of the Jail Code, was 683 or 43·1 per mille against 454 or 31·4 per mille in 1891. The average death-rate for the last 30 years was 56·3 per mille. Excluding the released moribund prisoners, and 3 cases of death by accident, the number of prisoners who died in other than subsidiary jails during the year was 551, and of these only 166 were received into jail in good health, while 178 were found to be in bad health, and 207 in indifferent health at the time of admission. The following jails show a death-rate higher than 70 per cent. during the past year:—

Jails.	Death-rates from all causes per mille.		Death-rates exclusive of cholera per mille.	
	1891.	1892.	1891.	1892.
Naya Dumka	...	221·1	...	121·6
Dinajpur	88·3	156·8	88·3	156·8
Singhbhum	32·4	135·9	32·4	83·6
Jalpaiguri	42·8	126·1	42·8	126·1
Birbhum	...	112·5	...	112·5
Bogra	34·4	109·0	34·4	109·3
Rangpur	94·3	109·3	69·7	109·0
Malda	...	94·3	...	94·3
Saran	62·2	84·0	43·9	36·9
Jessore	45·9	80·2	45·9	80·2
Noakhali	...	75·1	...	62·6

Note.—Including moribund prisoners released during the year 1892.

Of the 15 intermediate jails, 7 are included in the above list and only 4 are district jails. The mortality in the small jail at Naya Dumka is extraordinary, and the case has been specially reported on. There were 20 deaths among the convicts received into the jail, and of this number 9 were due to cholera. There were also six deaths, of which one was from cholera, among the under-trial prisoners. Nearly all these deaths occurred between the months of June and October when cholera and bowel diseases were prevalent throughout the district, and scarcity and want pressed heavily on the surrounding population. It is satisfactory to know that no deaths have occurred in this jail since November last. The Dinajpur Jail is situated in an unhealthy district, and out of the 16 prisoners who died during the year, 7 were admitted in bad health, 7 in indifferent health, and only 2 in good health. The Superintendent is now able to report a considerable improvement in the health of this jail. At Singhbhum, out of 13 convicts who died, 6 were received in bad or indifferent health. Cholera and bowel-complaints were prevalent all over the district during the middle months of the year, and 12 out of the 13 deaths occurred from these diseases. In Jalpaiguri the 7 convicts who died were all received in bad or indifferent health, and in Rangpur, out of the 20 who died in jail, only 5 were in good health when admitted. The mortality among the prisoners received into the Birbhum Jail from the district itself was only 25·9 per mille, and the high rate shown above is due to the transfer of sickly prisoners from the Rangpur Jail to Birbhum. Of the 9 convicts who died in the Bogra Jail during the year, 5 were received in bad or indifferent health. At his inspection of this jail Sir Charles Elliott noticed certain defects in the water-supply and in the position of the hospital quarters, and the attention of the Inspector-General was drawn to these defects, and measures have since been taken to remedy them. In Jessore only 4 out of the 18 convicts who died were received in good health, while of the 3 who died at Malda, 2 were in bad and 1 in indifferent health when admitted. The Committee appointed to enquire into the unhealthiness of the Jails at Purnea, Rangpur, and Dinapur submitted its report during the year. Of the several valuable recommendations made by the Committee some have already been carried out, and effect will gradually be given to the others as opportunities arise.

The Inspector-General attributes the high rate of mortality among prisoners, as compared with 1891, chiefly to the unhealthiness of the year and to the prevailing scarcity. This is to a great extent borne out by a comparison of the figures for the past year, as shown in Statement XVIII appended to the report, with those of the previous year. The number of deaths

among convicts in 1892 exceeded the number for 1891 by 118. Among prisoners who had been less than six months in prison when they died, there was an increase of 104 deaths, while among those who had been in prison for terms varying from 6 to 12 months there was an increase of 16 deaths. The number of deaths among convicts who had undergone more than 12 months' imprisonment is practically the same for both years. Deaths among under-trial prisoners rose from 37 in 1891 to 69 in 1892. These figures show clearly that the increase in the number of deaths occurred among those who had recently come into the jail, and this bears out the theory that the high rate of mortality was mainly due to the unhealthiness of the season and to the prevalence of disease and want outside the jails, and not to diseases contracted within the walls. This is no doubt the true explanation of the high rate of mortality throughout the jails of the province. Nevertheless the record of the year is far from encouraging, and Sir Charles Elliott desires to impress once more upon all Superintendents of Jails the necessity of devoting special attention to this the most important of all the questions affecting jail administration. His Honour trusts that the close of the present year will show a large decrease in the prison death-rate throughout the jails of the province.

Inspections.

29. During the period that he was in charge of the department, Dr. Comins visited 28 jails, including all the Central Jails, and 9 Subsidiary Jails. Dr. Lethbridge inspected 8 jails previous to the 28th March, the date on which he made over charge to Dr. Comins. The number of inspections made by Judicial and Magisterial Officers increased from 2,145 in 1891 to 2,236 in 1892, but the number of visits paid by non-official visitors fell from 144 in 1890 and 137 in 1891 to 104 during the year under review. The Lieutenant-Governor himself inspected the jails at the head-quarters of all districts and sub-divisions which he visited and made special inspection notes in four cases.

Officers of the Department.

30. The Lieutenant-Governor is glad to notice the favourable mention made by the Inspector-General of several officers of his Department. Among those who receive special commendation are Dr. Bovill of Berhampore and Dr. Umesh Chandra Mukerji of Bankura. The thanks of the Lieutenant-Governor are due to Dr. Comins himself for his zealous administration of the department during the year. His report is thorough and painstaking, and shows that careful regard to details, which is the basis of all improvement in the health, the cost, and the labour outturn of prisoners, the three points which most require his continued and vigilant attention.

ORDER.—Ordered that a copy of this Resolution be forwarded to the Inspector-General of Jails for information and guidance.

Ordered also, that a copy of this Resolution, and a copy of the Report, be submitted to the Government of India, in the Home Department.

Ordered also, that a copy of this Resolution be published in the *Calcutta Gazette.*

By order of the Lieutenant-Governor of Bengal,

H. J. S. COTTON,

Chief Secretary to the Govt. of Bengal.

RE-ORGANISATION OF THE STAFF OF SUPERIOR POLICE OFFICERS IN BENGAL AND ASSAM.

POLICE.

RESOLUTION No. 97A—D.

Dated Darjeeling, the 20th May 1893.

READ again—

A letter from this Government, to the Government of India, No. 348, dated 25th January 1892, submitting proposals for the revision of the staff of superior police officers in Bengal and Assam.

Read—

A letter from the Government of India, in the Home Department, No. 180, dated 25th April 1893, forwarding a copy of a Despatch from the Government of India, to Her Majesty's Secretary of State, No. 23, dated 18th January 1893, and of a Despatch from the Secretary of State, No. 9, dated 23rd February 1893, according sanction, with minor modifications, to the scheme of re-organisation proposed by this Government.

THE main principles of the proposals made by this Government for the re-organisation of the staff of superior police officers, which have now been approved by the Government of India and Secretary of State, are (1) that there should be a District Superintendent of Police for every district in Bengal, the present practice, under which five districts are supervised by Assistant Superintendents, being abandoned; and (2) that Assistant Superintendents of Police should only be provided for the most important sub-divisional charges and as a reserve for leave vacancies. The effect of these proposals is that the number of District Superintendents will be increased from 50 to 55, the future distribution being as shown below:—

For charge of districts in Bengal	45
Commandant, Lushai Police	1
Personal Assistant to the Inspector-General of Police ...	1
Assistant Inspectors-General of Police for Railways ...	2
District Superintendents of Police for Assam	6
Total ...	55

The existing number of sanctioned Assistant Superintendents will be reduced from 36 to 29, and the number of probationary Assistant Superintendents from 15 to 8.

The distribution of Assistant Superintendents will be as follows:—

Employed in Assam	5
Lushai Hills and large subdivisions	8
Deputy Commissioner of Police, Calcutta	1
In charge of Special Branch	1
	15
Provision for furlough at 20 per cent. on 72 charges, including 2 Deputy Inspectors-General	14
Total ...	29

2. At the same time the appointments of District Superintendents and of Assistant Superintendents will be regraded thus:—

District Superintendents of Police.

Present scale.		Rs.		Rs.	Sanctioned scale.		Rs.		Rs.
7	at	1,000	=	7,000	5	at	1,000	=	5,000
7	”	800	=	5,600	6	”	900	=	5,400
13	”	700	=	9,100	7	”	800	=	5,600
11	”	600	=	6,600	12	”	700	=	8,400
12	”	500	=	6,000	12	”	600	=	7,200
					13	”	500	=	6,500
50				34,300	55				38,100

Increase = Rs. 3,800 per mensem.

Assistant Superintendents of Police.

Present scale.					Sanctioned scale.				
		Rs.		Rs.			Rs.		Rs.
16	at	400	=	6,400	14	at	400	=	5,600
15	„	300	=	4,500	15	„	300	=	4,500
5	„	250	=	1,250					
36				12,150	29				10,100

Decrease = Rs. 2,050 per mensem.

Probationers.

		Rs.		Rs.			Rs.		Rs.
15	at	250	=	3,750	8	at	250	=	2,000

Decrease = Rs. 1,750 per mensem.

The grades of District Superintendents are increased from five to six, and the grades of Assistant Superintendents are reduced from three or two.

These orders have been communicated to the Local Government with instructions to give effect to them gradually, so that the proposed regrading of District Superintendents may, as far as this can be arranged without serious inconvenience, be brought into force *pari passu* with the reduction in the strength of Assistant Superintendents and Probationers.

3. In consequence of the reduction which has already been effected in the number of Assistants and probationers, and of the recent retirement and deputation of officers whose places have not been filled up, the Lieutenant-Governor finds himself in a position to give immediate effect to the proposed revision of establishment, so far as numbers are concerned, and although it is not possible at present to fill up all the appointments according to the revised scale, a redistribution of grades in the direction sanctioned can at once be made. Excluding Messrs. Savi and Gayer, whose lien on their appointments will be suspended, there are at present 93 officers on the establishment against 92, which is the full number sanctioned by the Government of India and Secretary of State, and, under the authority now conveyed by the Government of India, the Lieutenant-Governor is pleased to direct that these officers shall at once be redistributed into grades as follows:

						Rs.
	8	District Superintendents, at Rs. 1,000 each	...	...	...	8,000
	2	Ditto, at „ 900 „	...	...	...	1,800
	7	Ditto, at „ 800 „	...	...	...	5,600
	12	Ditto, at „ 700 „	...	...	...	8,400
	12	Ditto, at „ 600 „	...	...	...	7,200
	14	Ditto, at „ 500 „	...	...	...	7,000
	55					38,000
	14	Assistant Superintendents at Rs. 400 each	...	...	...	5,600
	15	Ditto, at „ 300 „	...	...	...	4,500
	29					10,100
	9	Probationers at „ 250 „	...	...	...	2,250
Total	93	at a monthly cost of	...	...	...	50,350

4. This re-arrangement shows one probationary officer, and a monthly expenditure of Rs. 150 in excess of the sanctioned scale. The excess expenditure is, however, apparent only, as it includes the salary of an officer (Mr. Halliday) on deputation, which is debitable to another department, and not to the Police budget. The probationary officer in excess will be absorbed in the first vacancy that occurs. The re-distribution in the grades of District Superintendents on the exact lines of the sanctioned scale will be enforced as oppportunities occur, but it cannot be completely carried out until vacancies arise in the first grade of District Superintendents, and the number of officers in that grade is reduced to five. As such vacancies occur, there will be a re-adjustment in the lower grades until the sanctioned scale is reached.

5. Probationers who have passed their departmental examinations and have been confirmed in the department will be allowed to officiate as Assistant Superintendents, and draw the higher salary of the grade in which they may be acting.

6. The following statement shows the effect of the orders now passed. The names of the officers who receive promotion are printed in *italics*, and their promotion will be duly notified in the Gazette:—

District Superintendents of Police, 1st grade, on Rs. 1,000 (*eight*).

1. Colonel Herbert Maynard Ramsay.

* Means of 5 days. | † Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period
The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10
rainfall the normal mean are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station
district, *i.e.*, from total rainfall at the subdivisional stations in the district sending in returns divided by the number of stations. A rainy day is one of

for the week ending Saturday, the 20th of May 1893.

Variation from normal mean.	Mean 8 A.M. temperature.	Average humidity at 8 A.M.	Average cloud amount at 8 A.M.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. Of week. Mean for district.	Normal mean.	Average number of rainy days.	Normal number of rainy days.	Rainfall. Since 1st of month. Mean for district.	Normal mean.	Variation.	Since 16th May 1893. Mean for district.	Normal mean.	Variation.	District.

Explanation.—... indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall column are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the 23rd May* 1893.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 20TH MAY 1893.

At the beginning of the week pressure was considerably above the normal in the north-western districts, and from there excess slowly diminished towards the south-east of the Bay where there was a small defect. In consequence of this arrangement of pressure, the most prominent feature being its uniformity, calm clear weather prevailed over the whole of Bengal and Orissa. With the almost continuous sunshine, temperature from being slightly below the normal in all districts, began to rise, and readings in excess of the normal were first reported from North Bengal and Assam. The area of excessive temperature gradually extended to the south-west, till by the end of the week there was a small excess even in Orissa and Chota Nagpur.

Pressure began to fall early in the week both in Bengal and over the Bay, and this downward change continued steadily, and latterly with somewhat greater rapidity in the south of the Bay, where gradients became much steeper, especially during the last two days of the week. These changes in the south of the Bay led to unsettled weather which advanced up the east of the Bay and caused general rain in Burmah. A few showers fell in East and North Bengal owing to the advance of moist winds, and this formed almost the whole of the rainfall received during the week.

The week has been characterised in Bengal by fine settled weather with rising, and almost for the first time this year, general excessive temperature.

Pressure.—A steady fall continued slowly almost throughout the week, and from being a tenth of an inch above the normal, readings fell to nearly a tenth of an inch below. The means for the whole week are practically normal, the difference being generally only a few thousandths of an inch.

Temperature—Rose steadily and at times rapidly, the rise beginning in the north-east of the province and spreading gradually to the south-west. It was only on the last day of the week that readings in Orissa and Chota Nagpur rose above the normal. Though there was general defect at the beginning of the week, means are above the normal in all districts except Chota Nagpur and Orissa, when there is defect of less than 1°. The mean excess varies from 0·4° in South-West Bengal to 3·9° in North Bengal. Excess is much greater in Assam, being more than 6°.

Rainfall.—With the exception of a few scattered showers on the first day of the week and again towards the close, rainless weather prevailed. On an average East Bengal received ·22 inch, South-West Bengal ·1 inch, North Bengal and Orissa less than ·1 inch. In Chota Nagpur and Bihar no rain was reported.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 20th of May 1893:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1893.

The total fall from 1st January to 20th May 1893	12·17
The average fall of the corresponding period for 24 years, Surveyor-General's Office	7·54

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

⌓, dew.

RESULTS OF EXAMINATION OF CANDIDATES FOR APPOINTMENT AS DEPUTY MAGISTRATES-COLLECTORS, AND SUB-DEPUTY COLLECTORS.

RESOLUTION—No. 101A—D.

APPOINTMENT DEPT.

Dated Darjeeling, the 22nd May 1893.

READ—

The Resolution of the 25th May 1892, reviewing the result of the examination held in March of that year, and appointing candidates to be probationers in the Executive Branch of the Provincial and Subordinate Civil Service.

The notification of the 15th November 1892, publishing rules for the examination for admission to the Executive Branch of the Provincial and Subordinate Civil Service of 1893.

The reports of the Examiners at the examination held on the 27th, 28th, 29th, and 30th March 1893.

As the result of the examination for the Subordinate Executive Service held in 1892, five gentlemen were selected to officiate as Deputy Magistrates and Deputy Collectors, twenty to be Probationary Deputy Magistrates and Deputy Collectors, and ten to be Probationary Sub-Deputy Collectors. The twenty Probationary Deputy Collectors have in due course been appointed to be Officiating Deputy Magistrates and Deputy Collectors, and the ten Probationary Sub-Deputy Collectors have also been absorbed either as substantive *pro tempore* or as Officiating Sub-Deputy Collectors of the 4th grade. The Lieutenant-Governor is glad to say that the report furnished by their official superiors of the working of these probationary officers has been satisfactory.

2. In November last it was notified that at an examination to be held in March 1893, seven candidates would be selected for Probationary Deputy Collectorships on a salary of Rs. 50 a month, and seven for Probationary Sub-Deputy Collectorships on a salary of Rs. 30 a month respectively. It was announced that four of the probationers for Deputy Collectorships would be appointed from the first four candidates on the list in order of merit, that three would be selected by the Lieutenant-Governor from amongst those who have obtained a minimum of one-third of the total marks, and that from the remainder of those qualified by obtaining one-third of the total marks, the Lieutenant-Governor would select seven more candidates as probationers for Sub-Deputy Collectorships.

3. The examination so notified was held on the 27th, 28th, 29th, and 30th of March 1893. No fewer than 154 competitors obtained permission to compete, and of these 147 (of whom all except eight* were graduates) actually appeared and sent in papers. Of these 147 candidates, 125 took up Bengali as their vernacular, 18 took up Hindi or Hindustani, and four took up Uriya. No less than 134 of the candidates have obtained the minimum of one-third marks necessary for appointment into the Subordinate Executive Service by nomination.

* Of these eight, four failed to obtain one-third marks.

4. Further consideration of the number of probable retirements during the present year, and of the number of vacancies which are likely to be occasioned by the deputation of officers on settlement or other special duty, has shown that the number of advertised vacancies is not sufficient, and the Lieutenant-Governor has accordingly been pleased to direct that the number of Probationary Deputy Collectorships to be now filled up shall be raised from 7 to 10, and the number of Probationary Sub-Deputy Collectors from 7 to 14. In order to avoid a block among the Probationary Sub-Deputies, the Lieutenant-Governor has also decided to select ten officers from that class during the year to officiate as Deputy Collectors, the choice being made with reference to character, qualifications, standing in the service, and the result of the competitive and departmental examinations.

5. The following Sub-Deputy Collectors, who passed 5th, 8th, 13th, 22nd and 25th respectively at the recent examination, will now be promoted to officiate at once as Deputy Collectors:—

Babu Jotendra Mohan Sinha, B.A.
,, Lolit Chundra Das Gupta, B.A.
,, Makhun Lall Chatterjee, M.A.
,, Akshoy Kumar Sen, B.A.
Mr. Rowland Nogendra Lall Chandra, M.A.

6. The following four gentlemen, who stood first in order of merit, are entitled to appointments as Probationary Deputy Collectors:—

	Number of marks.
Babu Debendra Kumar Mittra, M.A.	518
,, Nogendro Nath Dutt, M.A.	516
,, Bepin Bihary Banerjee, M.A.	508
,, Jyotish Chunder Sen, B.A.	502

The number of candidates to be selected by the Lieutenant-Governor from among those who have obtained one-third marks is raised from three to six. The choice has been carefully made with reference to the number of marks obtained, the claims upon Government of members of the candidate's family, the interests of the different classes of the community, and the requirements of the public service. The following are the candidates selected for appointment as Probationary Deputy Collectors:—

Babu Jogeshwar Biswas, B.L.
,, Brij Bansi Sahai, M.A., B.L.
Maulvi Mahomed Yusaf Ali, B.A.
Babu Mati Lal Roy, B.A. (No. I).
Mr. L. J. Clarke, B.A. (Oxon).
,, R. B. Bainbridge.

All these probationary officers will receive a salary of Rs. 50 per mensem, and if the report from the districts in which they are stationed is favourable,

they will, after such period of probation as may seem advisable, be appointed to be Officiating Deputy Magistrates and Deputy Collectors as vacancies occur. They will not ordinarily be vested with magisterial powers until they are so appointed. Separate orders will now be passed posting all the gentlemen above named to districts.

7. The following are the 14 candidates selected by the Lieutenant-Governor from among those who have obtained one-third marks to be Probationary Sub-Deputy Collectors:—

Babu Hem Kumar Mullick, B.A.
,, Himangshu Nath Chuckerbutty, M.A.
,, Chintaharan Chatterjee, B.A.
,, Charu Chundra Kumar, B.L.
,, Paramesh Prasanna Roy, B.A.
,, Harendro Nath Banerjee, M.A.
,, Hara Krishna Mahanti, B.A.
,, Monmotho Nath Sircar, M.A., B.L.
,, Bhupendra Nath Gupta, B.A.
,, Rai Krishna Bahadur, B.A.
,, Rama Ballabh Misra, M.A.
Maulvi Syed Abdul Salek, B.A.
,, Mohamed Habibar Rahman, B.A.
,, Syed Ali Mazhar, B.A.

The probationary officers will receive a salary of Rs. 30 per mensem at present, and will, if they are satisfactorily reported on, be gradually absorbed into the fourth grade of Sub-Deputy Collectors as vacancies occur. Separate orders will at once be passed posting them to districts.

ORDER—Ordered that the above Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

H. J. S. COTTON,

Chief Secretary to the Govt. of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 27th May 1893.

Division	No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.					
BURDWAN DIVN.	1	Burdwan	May 27, '93	11·81	Weather—hot up to 23rd. High storms since 25th. Cultivation going on. Fodder and water sufficient. Prices of common rice :— Srs. Burdwan ... ... 11½ to 13 } per rupee. Kalna ... ... 10 to 13 } Katwa ... ... 13 } Raniganj ... ... 13 }
	2	Bankura	„ 27, '93	5·64	Weather—cloudy with incessant rain from Thursday (25th) attended with high winds. The heavy rain of the week has stopped all agricultural operations for the present and injured the standing crops (*til* and *kapas*) to some extent. Fodder sufficient. Price of rice 11 seers per rupee at Sadar.
	3	Birbhum	„ 27, '93	3·87	Cyclonic storms with unceasing rain since Thursday night. Temperature down to 80 degrees. Transplantation of sugarcane stopped owing to this unfavourable weather. Price of rice 12 to 14½ seers per rupee.
	4	Midnapore	„ 27, '93	6·97	Weather—cyclonic. Prospects uncertain while the rain continues, but believed to be good. Prices of common rice :— Srs. Sadar ... ... 11 } per rupee. Contai ... ... 13 } Tamluk ... ... 12 }
	5	Hooghly	„ 27, '93	5·32	Weather—cyclonic with very high winds and constant rain. Cultivation and sowing of jute and rice continue. Situation now very favourable for an early season. Prices of common rice :— Srs. Sadar ... ... 10 to 11 } per rupee. Serampore ... ... 10 to 11½ } Jahanabad ... ... 10 to 12¾ }
	6	Howrah	„ 27, '93	7·59	Weather—extraordinarily stormy and wet. Condition of cattle good. Fodder and water-supply sufficient. Rice 10 to 11½ seers per rupee. No information yet as to whether the district has suffered from the cyclone.
PRESIDENCY DIVN.	7	24-Parganas	„ 27, '93	9·68	Weather—rainy and stormy. In some parts of the district *aus* and jute seedlings have been flooded. Sufficient water and fodder. Prices of common rice :— Srs. C. Sadar ... ... 10 to 12 8 } per rupee. Basirhat ... ... 11 7 } Barasat ... ... 9 8 } Diamond Harbour ... 12 4 }
	8	Nadia	„ 27, '93	6·65	Weather—hot at the beginning of the week, cool and damp at the end of it. The very heavy rain may have done some damage to the *aus* rice on low lands which has just germinated, otherwise rice and sugarcane are doing well. By next week the effect of the rain on the crops will be better known. Prices stationary. Fodder and water for cattle sufficient.
	9	Khulna	„ 27, '93	8·97	Weather—hot in the beginning of the week; since then very stormy. All agricultural work is at a standstill since Tuesday last (23rd) on account of heavy rain and high wind. Prices stationary. Fodder and water for cattle sufficient.
	10	Jessore	„ 27, '93	7·33	Weather—hot in the beginning of the week, wet and stormy during the latter part. The heavy rainfall of the week will interfere with the sowing of *aman*. Harvesting of *til* has commenced. Fodder and water for cattle sufficient. Price of rice has slightly risen.
	11	Murshidabad	„ 27, '93	4·81	Weather—exceedingly hot in the beginning of the week and cloudy with strong east winds and rain since Thursday (25th). Sowing of *bhadoi* almost finished. Indigo plants promising. Harvesting of *til* has commenced. Fodder sufficient for cattle. Common rice sells at 11½ seers per rupee.

	No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concld.*					
CHITTAGONG DIVN.	12	Chittagong	May 27, '93	5·20	Weather—cyclonic. Prospect of crops good. Prices stationary. Cattle-disease in Chakaria and Garjania. Supply of fodder sufficient.
	13	Noakhali	" 27, '93	8·67	Almost incessant rain since 25th with high wind. Progress of sowing of *aus* retarded by heavy rain and storm and young plants damaged. Fodder and water ample. No cattle-disease. Prices stationary.
	14	Tippera	" 27, '93	7·09	Weather—hot in the beginning of the week; cool with storms of wind and rain at the close. *Til* being harvested. Reaping of *boro dhan* almost completed. Condition of *aman* and jute favourable. Prospects of crops good.
	15	Chittagong Hill Tracts.	" 25, '23	1·29	Weather—cloudy throughout the week. Sowing in *jums* still continues. No cattle-disease reported. Common rice being sold at 10 seers per rupee.
DACCA DIVN.	16	Dacca	" 27, '93	4·74	Weather—very hot throughout the week except the last two days which were rainy. Prospects of standing crops fair. Fodder available. No cattle-disease. Common rice selling at from 10 to 12 seers per rupee.
	17	Faridpur	" 27, '93	9·40	Weather—abnormally hot last Sunday (21st); since 23rd high south-east wind began to blow; from the 25th weather has been cyclonic. Standing crops doing well, but recent heavy rain will probably damage recent sowings. Common rice sells at from 11 to 12 seers per rupee. Cattle-disease still exists in two thanas; otherwise cattle are doing well and get fodder.
	18	Backergunge	" 27, '93	12·39	Weather—cyclonic; heavy rain and strong winds throughout the greater part of the week. The heavy rain has damaged the *aus* plants on low-lying lands. Common rice selling at from 9 to 12 seers per rupee. Fodder and water sufficient.
	19	Mymensingh	" 27, '93	2·88	Weather—first part of the week very hot, latter part wet. State and prospects of crops good. Common rice selling at from 11 to 13 seers per rupee. Health of cattle good. Supply of fodder and water sufficient.
RAJSHAHI DIVN.	20	Dinajpur	" 27, '93	0·44	Weather—hot and close during the early part of the week. Cyclonic storm with rain since the morning of Friday (26th). The rain has done good to the standing crops, which are doing very well. Prospects excellent. Prices of rice unchanged. Condition of cattle good. Fodder and drinking water sufficient.
	21	Rajshahi	" 27, '93	4·05	Weather—rainy and stormy. Prospects of standing crops good. The rain that was much wanted fell in great torrents in the latter part of the week. No cattle-disease reported. Fodder and water available. Price of common rice is the same as reported last week.
	22	Rangpur	" 27, '93	0·29	Weather—cloudy and warm; high wind with slight rain at close of week. Rain wanted for crops on high lands. Price of common rice 11 to 13 seers per rupee.
	23	Bogra	" 27, '93	0·01	Weather—hot in the early part of the week, stormy at the close. Sowings of *aus*, jute and sugarcane in progress. Lands are being prepared for *aman*. Prospects good. Common rice sells at 13½ seers per rupee. Fodder and water sufficient.
	24	Pabna	" 27, '93	5·10	Weather—first part of the week cloudy and sultry, the latter part rainy and stormy. It was cyclonish yesterday (26th). Owing to incessant rain most of the low-lying lands in thana Dulia could not be sown with *aus*. On high lands in this thana, as in other thanas, the *aus*, jute and sugarcane are doing very well. Price of common rice at Pabna 11½ seers per rupee. Fodder and water-supply sufficient. Condition of cattle good.
	25	Darjeeling	" 27, '93	0·74	Weather—early part of the week fair with warm sun; later part cloudy with showers and less sultry. *In the hills:*—*Bhutta* and *bhadoi* progressing well. *Chota marua* has been planted. Potatoes in some places being dug, in other places in flower. *Kangni* also doing well. *In the terai:*—Prospects of crops good. *Haimanti* sowings going on. Prices of course rice:— Srs. Hills ... ... 8 to 10 } per rupee. Terai ... ... 11 to 12 }
	26	Jalpaiguri	27, '93	0·03	Weather—hot; high winds in the latter part of the week. Prospects of *bhadoi* and jute favourable. Common rice sells at 12 seers per rupee. Fodder and water sufficient. No cattle-disease reported.

No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR.				
BHAGALPUR DIVN.				
27	Monghyr	May 27, '93	Nil	Weather—cool and cloudy in the latter part of the week. Lands are being ploughed for paddy. *Bhadoi* sowings going on. *Cheena* is being harvested. Indigo and sugarcane in excellent condition. Plenty of fodder and water. Prices of common rice :— Srs. Sadar ... ... 13 to 15 } Begusarai ... ... 14 } per rupee. Jamui ... ... 11½ }
28	Bhagalpur	„ 27, '93	0·52	Weather—hot in the early part of the week, now cloudy and cool. Rain wanted in the north for the *bhadoi* and *aghani* sowings and transplanting, otherwise prospects generally good. Common rice 14½ seers per rupee.
29	Purnea	„ 27, '93	0·01	Weather—very hot till 25th; now overclouded, cold and stormy. Prospects of *bhadoi* and winter rice good. Weeding of former facilitated by fine weather. The approaching rain will do it good and is much wanted for indigo which was beginning to burn. *Kauni* harvest in progress with good outturn. Fodder and water plentiful. Prices of rice stationary :— Srs. Sadar ... ... 13 } Kishanganj ... ... 12 } per rupee. Araria ... ... 16 }
30	Malda	„ 27, '93	2·71	Weather—hot and oppressive in the beginning of the week, cyclonic during the last two days. Harvesting of *boro* rice in full progress. *Bhadoi* paddy is being weeded. Jute and indigo plants thriving. Coarse rice selling at from 11 to 15 seers per rupee. Supply of fodder and water ample.
31	Sonthal Parganas	„ 27, '93	3·34	Weather—strong easterly winds with rain in south and west. Hot west winds in north. *Boro dhan* being reaped—a good crop. Sugarcane doing well. *Bhadoi* sowings doing well. Ground being prepared for winter paddy. Prices unchanged. Fodder and water-supply good.
PATNA DIVISION.				
32	Patna	„ 27, '93	Nil	Weather—hot but cool about close of the week. Sugarcane and millets doing well. Fields being prepared for *bhadoi* and paddy sowings. Extraction of *banga* cotton going on in Barh. Fodder and water for cattle sufficient. Prices of common rice :— Srs. Patna ... ... 15 } Barh ... ... 11¾ } Bihar ... ... 16¾ } per rupee. Dinapore ... ... 15 }
33	Gaya	„ 27, '93	Nil	Weather—very hot early in week; cloudy, unsettled and cool latterly. *Bhadoi* ploughing going on, and sowing of *marua* millet begun. Sugarcane and *cheena* millet doing well. Prices stationary. Fodder and water-supply sufficient.
34	Shahabad	„ 27, '93	Nil	Weather—cloudy and close. Sugarcane doing well. *Cheena* being harvested. Prices stationary. Fodder and water abundant.
35	Darbhanga	„ 27, '93	Nil	Weather—cloudy and stormy. Paddy, *mung* and *cheena* doing well. *Mung* being gathered in places. Preparation of lands for *bhadoi* sowings still going on. Fodder and water for cattle sufficient. Prices stationary.
36	Muzaffarpur	„ 27, '93	Nil	Weather—hot with east wind. Agricultural operations in progress. Early shower of rain wanted. Fodder and water sufficient. Prices stationary. No disease among cattle.

	No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR—*concld.*					
PATNA DIVISION—*concld.*	37	Saran	May 27, '93	0·21	Weather—moist and cloudy. East wind, hot. Crops on the ground good. Fodder and water ample. Prices of common rice:— Srs. c. Chapra ... ... 14 0 Siwan ... ... 12 0 } per rupee. Gopalganj 13 5
	38	Champaran	„ 27, '93	0·46	Weather—warm. Prospects of indigo fair and of food-crops good. Prices stationary. Fodder and water sufficient.
ORISSA.					
ORISSA DIVN.	39	Cuttack	...		Report not received.
	40	Puri	„ 25, '93	15·27	Weather—very hot during the first part of the week; in the latter part rainy and stormy. Ploughing and sowing stopped on account of the rain. Miscellaneous crops doing well. Rice sells at from 11 seers 13 chitaks to 17 seers 1 chitak per rupee.
	41	Balasore*	„ 27, '93	15·60	Weather—very stormy. The excessive rainfall and widespread floods have greatly injured cultivation and done much harm to rice seedlings and other crops. About the normal area of sugarcane seems to have been planted. Prices of rice:— Srs. Balasore ... ... 14 } per rupee. Bhadrak 16
CHOTA NAGPUR.					
South-West Frontier Agency.					
CHOTA NAGPUR DIVN.	42	Hazaribagh	May, 27, '93	0·73	Weather—seasonable up to 24th; very disturbed, cloudy and stormy since that date. Sugarcane doing well. Mango much damaged by high winds. Fodder and water sufficient. Common rice 10 to 14 seers per rupee at head-quarters and 8 to 11 seers per rupee at Giridi.
	43	Lohardaga	„ 27, '93	1·66	Weather—cool. Ploughing going on. Sowing of *gora dhan* and *goondli* continues. Common rice selling at 13 seers per rupee. Fodder and water sufficient.
	44	Palamau	„ 26, '93	0·13	Weather—very hot during the first part of week; cloudy and somewhat cooler since yesterday (25th). A little rain reported from some stations. Sugarcane doing well. Prices stationary.
	45	Singhbhum	„ 27, '93	4·98	Weather—very wet and stormy since the 24th. The rains have apparently set in. Ground is being prepared, and the *bhadoi* crop is being sown. Crops on the ground, viz., paddy, *boro dhan* and sugarcane, doing well. Price of common rice at Chaibassa 12 seers per rupee. Cattle-disease reported from some villages in pargana Dhalbhum.
	46	Manbhum	„ 27, '93	5·85	Weather—very stormy and rainy. Ploughing stopped. Sugarcane doing well. Rice selling at from 10 to 13 seers per rupee. Fodder and water sufficient.

* Means of 5 days. † Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10 rainfall the normal mean are the numerical average of the rainfall in that district determined from the returns sent in by the subdivisional station district, *i.e.*, from total rainfall at the subdivisional stations in the district sending in returns divided by the number of stations. A rainy day is one of

...for the week ending Saturday, the 27th of May 1893.

Variation from normal mean.	Mean 8 A.M. temperature.	Average humidity at 8 A.M.	Average cloud amount at 8 A.M.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. Of week. Mean for district.	Normal mean.	Average number of rainy days.	Normal number of rainy days.	Rainfall. Since 1st of month. Mean for district.	Normal mean.	Variation.	Since 16th May 1893. Mean for district.	Normal mean.	Variation.	District.

Explanation.—... indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the 30th May* 1893.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 27TH MAY 1893.

THROUGHOUT the greater part of the week weather in the north of the Bay, and latterly in Lower Bengal, has been under the influence of a depression which appears to have commenced in the extreme south of the Bay some days before, and taking an almost northerly course up the Bay, began to affect the general weather conditions on the north-west coast on Saturday, the 20th, the last day of the previous week.

On the 17th, as for some days before that, the conditions which are supposed to lead up to and initiate stormy weather in the Bay were unusually well marked, viz., very uniform pressure with light winds and cloudless skies. The change from these conditions began to appear in the south of the Bay in steeper gradients, and by the northward advance of a moist current in the east of the Bay, giving heavy rain in Burma and Arakan. The storm was then probably not well defined, but in any case the centre of the disturbance must have been too far from any of the observatories on the coast for its position to have been even guessed at, far less determined. The only information to hand regarding its early history is from the log-book of the S. S. *City of Cambridge*, which left Ceylon on the 17th, and passing through the disturbance reached the head of the Bay on the 20th. At first a gale from the south was experienced, and afterwards from the north-east, while pressure was very unsteady. The bad weather was left behind, and in the extreme north of the Bay ordinary weather prevailed.

On Sunday, the 21st, the first day of the week under review, after a steady fall of pressure for several days all round the coast, a depression was shown covering the whole of the north of the Bay, but it had not then begun to cause bad weather at any of the meteorological stations. The sea was very rough at Diamond Island, and a fairly strong wind was blowing, but after a day or two both wind and sea began to moderate. When this improvement was established at Diamond Island, the depression had become better defined in the north-west of the Bay, and it then appeared that the disturbance was similar in character to the ordinary small storms which occur frequently in the rainy season.

On Monday, the 22nd, pressure was rising briskly in the south-east of the Bay and changes were small everywhere, while wind velocity was low except at Diamond Island and in Ceylon. After this, however, its motion was slow towards the north, the centre probably passing in an almost northerly direction, and at no great distance from the North Orissa Coast. On Tuesday, the 23rd, pressure fell rapidly at False Point, the wind remaining north-easterly until the evening, when communication with the station ceased. Pressure had fallen to 29 inches, and this fall was accompanied by a strengthening wind and incessant heavy rain. At 8 A.M. on Wednesday morning the centre appeared to be almost east of False Point, and wind velocity was increasing at all the stations on the north-west coast, as well as over all Lower Bengal, but rainfall, though very heavy in Orissa, and gradually extending to South-West Bengal, was very partial at stations further inland or entirely absent. During Wednesday and Thursday the motion of the depression must have been very slow, and at times it appeared to be almost stationary, but it was steadily developing. On the afternoon of Thursday it seemed to be moving in a more westerly direction, so as to pass well to the west of Balasore, as the wind directions at Saugor Island, Calcutta and Balasore began to change to south through east, and the velocity fell considerably at the first two. In the evening of Thursday, however, the winds returned to their previous north-easterly directions and began to increase rapidly in strength. On the near approach of the centre, pressure fell with great rapidity at Saugor Island, the lowest reading reported being at 5 o'clock on Friday morning, when it was 28·423 inches. The centre must then have been a short distance to the west of Saugor Island. A hurricane began about 4 A.M., and continued for many hours. At 5 A.M. the velocity was reported to be not less than 90 miles an hour, and the continuance of these high winds is shown by the average velocity from 8 A.M. on Friday to 8 A.M. on Saturday being 50 miles an hour. After passing Saugor Island the centre moved more to the west, passing about half way between Calcutta and Midnapore in the early part of the afternoon. It then returned to its previous direction, and passed slowly across the central and eastern districts of Bengal, but with steadily diminishing intensity.

The weather in Lower Bengal was necessarily very unsettled during the last half of the week. Strong cyclonic winds were blowing at all stations, and a good deal of rain was falling; but in Bihar and North Bengal fine weather continued till the end of the week. After the storm centre crossed the coast, very heavy rain preceded and accompanied its advance. Rainfall, however, became lighter and less general after the area of lowest pressure passed the central stations, and it never extended to North Bengal and Bihar. The north-easterly motion of the centre had evidently an important influence on the quantity of rain and its distribution in the northern districts, as the cyclonic circulation of winds which prevailed over a wide area meant westerly directions, and comparative absence of moisture even when the centre was still within a short distance from Calcutta.

Pressure.—The passage of the depression caused large fluctuations, and at the centre pressure was probably considerably lower than even at Saugor Island, where it reached 28·423 inches. At False Point it fell to 29 inches before communication ceased, and at Calcutta, Midnapore, and Balasore readings on Friday were very little over 29 inches. Owing to the slow motion of the depression changes during Friday were very small except at Saugor Island, Balasore and Midnapore, and at Sirajganj and Faridpur, where there was a rapid fall owing to the advance of the depression in that direction. Defect was very large for several days, and has affected the means for the week at all stations in Orissa and South Bengal. The largest mean defect is ·316 inch at Saugor Island, and it exceeds a quarter of an inch at Cuttack, Balasore and Calcutta. In the northern districts defect was very little over a twentieth of an inch.

Temperature.—Owing to the cloudy weather which prevailed in Lower Bengal and Orissa during the whole or a considerable part of the week, day temperatures were many degrees below the normal and night readings also, though to a much smaller extent. In North Bengal and Bihar, however, where the influence of the cyclone has been very slight, ordinary temperatures have continued. Defect in mean temperature is over 8° at Cuttack and Midnapore, and over 5° in many parts of South-West Bengal and Chota Nagpur. Average defect for Chota Nagpur is 6·9°, Orissa 5·7° and South-West Bengal 5°. In East Bengal there is defect of only 1·6° and South Bihar of half a degree, while in Assam, North Bengal and Bihar there is excess ranging up to 3·7° in Assam.

Rainfall has been unusually heavy in Orissa and South-West Bengal; the detailed falls will be found in the accompanying tables. In Chota Nagpur and also East Bengal considerably more than normal amounts have fallen, but in North Bengal and Bihar falls are either average or under. The mean fall for the whole of Orissa is 17·76 inches, in South-West Bengal 6·91 inches, East Bengal 6·98 inches, and in Chota Nagpur 2·66 inches. North Bengal received 1·98 inches as compared with a normal fall of 2·39 inches, South Bihar ·88 inch and North Bihar ·39 inch.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 27th of May 1893:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1893.

	Inches.
The total fall of rain from 21st to 27th May 1893	11·94
The average fall of the corresponding period for 24 years, Surveyor-General's Office	1·06
The total fall from 1st January to 27th May 1893	24·11
The average fall of the corresponding period for 24 years, Surveyor-General's Office	8·60

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; p, passing temporary showers; t, thunder; <, lightning; ●, continued rain; /, strong wind; u, threatening.

RESOLUTION ON THE SURVEY AND SETTLEMENT REPORTS.

REVENUE DEPARTMENT—LAND REVENUE.

Calcutta, the 29th May 1893.

RESOLUTION No. 2306.

READ—

Report of the Director of Bengal Surveys for the year ending 30th September 1892.

Read also—

Board's No. 386A., dated the 19th April 1893, submitting the Report of the Director of Land Records on settlements during the same year.

Submission of reports; charge and inspection.

The date originally fixed for the submission of these two Reports was the 15th November, but the Report of the Director of Surveys was not submitted till the 16th March 1893, while the Report of the Director of Land Records reached Government through the Board on the 20th April 1893. In Colonel Sandeman's case, his absence on leave during the recess prevented the report from being commenced at the proper time, and in Mr. Macpherson's case the pressure of urgent work in connection with the commencement of settlement operations in Bihar and Tippera and the necessity for inspecting the work in progress in Orissa, Chittagong, and elsewhere, compelled him to postpone the less essential work of report-writing. The Director of Land Records points out that the present arrangement does not leave him sufficient time to print, read, consider, abstract, and comment upon the local officers' reports. Separate orders will be issued after further consultation, but it is

very desirable that the task of writing the report should be completed before the active work of the cold season is entered upon. Colonel Sandeman, who submits the report on surveys, was appointed to be the Director of Bengal Surveys from the 1st April 1892, but was placed on special duty from the 27th January preceding for the purpose of making preliminary arrangements for the Bihar Survey, and assumed charge of the survey parties working in Bengal from the 8th March 1892. He went on furlough for six months on the 15th April 1892, making over charge to Colonel Strahan. Mr. Maude was in charge of the Department of Land Records from the 1st October 1891 to the 3rd November, and Mr. Finucane from the latter date to the 3rd May 1892, when he went on leave, being relieved by Mr. Macpherson, who remained in charge for the rest of the year. The Report of the Director of Land Records follows the order laid down by Government, giving precedence to the three important settlements of Orissa, Chittagong, and the Western Duars. The Director of Bengal Surveys deals first with the Bihar Survey, which is the most important work under his supervision, but which is not dealt with by the Director of Land Records, as settlement work did not commence in Bihar during the year of report. Colonel Sandeman as well as Messrs. Finucane and Macpherson were active in inspection and made a number of useful tours. The several Settlement and Assistant Settlement Officers of Orissa and Chittagong were generally out in camp for the greater part of their respective terms of employment during the year, and much good work was done. In Jalpaiguri and Chittagong the staff and establishment suffered much from sickness.

General results.

2. Surveys and settlements are now in progress over the whole of the regulation portion of the Orissa Division, and in portions of all the other Divisions except Chota Nagpur, where the Bengal Tenancy Act is not at present in force. The advisability of extending portions of the Act to this Division, under the provisions of Act XIV of 1874, for the purpose of a general survey and record of rights in order to allay agrarian disturbances and to facilitate the commutation of predial services, has long engaged the attention of Government, but no final decision has been arrived at pending the receipt of a report by the Board on certain subsidiary questions. The outturn of survey work by professional agency amounted during the year to 4,712 square miles of traverse survey, 2,290 square miles of cadastral survey, 327½ square miles of forest survey, and 556 square miles of topographical survey including 194 square miles of hill sketching in Chittagong, besides 187 square miles of skeleton boundary survey of tea grants and jungle and 17 square miles of detail survey of tea lands. With the exception of the forest survey, the Bhutan boundary survey, the Rajapur drainage survey, and the survey of the Town of Calcutta, all the surveys in progress have for their object the settlement of revenue or rent. It is true that the main purpose of the Bihar Survey is to record rather than to settle rents; still the former process tends almost inevitably to lead to the latter, as under the law it is open to either landlord or tenant to apply for the settlement of a fair rent. The total area in which the settlement of revenue or rents was being carried on during the year was 6,600 square miles of temporarily-settled tracts and Government estates, 1337 square miles of wards' estates, and 121 square miles of private estates. The cost of surveys and settlements incurred by Government in temporarily-settled tracts and Government estates (chiefly in Orissa, Chittagong, and the Western Duars of Jalpaiguri) since the commencement of the operations up to 30th September 1892 was Rs. 20,46,408; but the increase of revenue which these operations will yield has not yet been realised, nor can its amount be estimated with any approach to accuracy. The costs incurred by wards' estates for the same period amounted to Rs. 4,10,083; the increase of rent actually obtained is Rs. 61,728, and the additional increase expected Rs. 18,500, or altogether 15 per cent. on the outlay; the corresponding figures for private estates are Rs. 59,364, Rs. 7,239, and Rs. 1,213, which show an increase amounting to 12·2 per cent. on the outlay. Regarded therefore purely from the landlord's point of view the process of survey and settlement brings in a sufficient return to recommend it on financial grounds; while the tenants obtain an adequate set-off for the increase in their rent by having their status recorded and by being protected against further enhancement for a period of fifteen years. An examination of the record shows,

moreover, that the greater part of the increased rental brought out by settlement operations is not due to enhancement properly so called, but to the fact that the tenants have been found to be in possession of land materially in excess of the area for which they were paying rent.

Principles of Procedure.

3. A notable feature of the year's work has been the attempt to draw up a more uniform procedure for conducting survey and settlement operations throughout Bengal. In most of the other provinces of India the conditions governing settlement work are tolerably constant over the whole area affected; the same village systems prevail, the same agency is available, and consequently there is no great difficulty in laying down a standard procedure from which there will be only occasional departures. This, however, is not the case in Bengal. In different parts of the country very diverse conditions have to be considered and dealt with: the agency available for survey, the nature of the tenures, the extent of subinfeudation, and the character of the people themselves, vary materially in the areas under settlement. For these reasons, in the operations undertaken during the last few years, it has been impossible to adhere closely to the procedure laid down in the Survey and Settlement Manuals, and in practice the standard system has been constantly modified with reference to local peculiarities and the views of the Settlement Officers in charge. Efforts are now being made to work on more uniform lines. The leading principle is that the officers of the survey and Settlement Departments should be treated, while engaged in writing the records, as a single staff working with the common object of producing a correct record of the actual facts. With this end in view, rules for the writing of the record in Bihar, Orissa, and Tippera have been drawn up by the Directors of Surveys and Land Records, so as to adapt the general system laid down in the Manuals to the varying local requirements. These rules have been translated into the vernacular for the use of the survey amins and inspectors. The great advantage of combining the two establishments for the purpose of making the record is that the revenue officers employed on settlement work proper are constantly checking and supervising the khanapuri work or writing of the khasra (field index) and khatian (tenant-roll) drawn up by the survey officers, and the double test which is thus applied at all stages of the work will, it is believed, result in producing a correct record at the lowest possible cost compatible with requisite accuracy.

The Chittagong system.

4. In illustration of the differences between the old and the new methods, it is only necessary to compare the procedure under which the Chittagong Survey has been completed, with that which is now being carried out in Orissa, Bihar, and all other settlements in these provinces in which a professsional survey is made. In Chittagong the survey amins were strangers who could not understand the language of the country. They surveyed precisely what they saw, and entered on the map in pencil the boundaries of every subdivision of a field, a number of which sub-divisions, locally designated *kotas*, forms an integral field. The areas originally marked off as villages in the Revenue Survey, though generally too large for a single sheet of the map, were treated as units for the purpose of the settlement, instead of being divided into convenient unit blocks, so that there are on the average five sheets to a village. Traces of these maps were made for the Settlement Department, and settlement amins (local men) were sent to draw up the khasra and khatian, leaving the area columns blank. Their first business was to eliminate the *kotas* and find out which were the actual fields occupied by a separate tenant, and to give serial numbers to those fields; but as each amin worked on a separate sheet, this method brought out five separate series of preliminary numbers to each village. When the traces thus numbered were returned, the Survey Department re-numbered the true fields in one consecutive series for the whole village, worked out the areas, and made over the area lists to the Settlement Department. From the area lists prepared in the survey office, the settlement office muharrirs copied the areas into the khasras and khatians after correcting the numbers originally given in pencil to the fields in these records. The extra labour involved in this system and the additional risk of error are obvious, but the work was too nearly completed, when Colonel Sandeman took charge, to make it worth while for him to attempt to introduce the better system which he has devised.

The Bihar and Orissa system.

5. Under that improved system, as now followed in Orissa and Bihar, the survey amins are required to survey the boundaries of fields only, inking them at the same time without putting down the numbers. The maps are sent to the survey office for scrutiny and testing, after which khanapuri is commenced by the survey amins. If the amin who prepares the maps is an up-country man, as in Orissa he generally is, a local man, who has been taught survey, is deputed from the Survey Office to do khanapuri. Experience has shown that the local amins work too slowly and too inaccurately to be employed on surveying. For the purpose of khanapuri the local amin is supplied with a map sheet, blank sheets of the khasra, khatian, and khewat forms, and jamabandi papers previously obtained from the landlords. A second amin is at the same time employed to prepare the khatian simultaneously with the khasra. All the entries in the khasra and khatian, except such as require the interference of the Settlement Officer, are made by the survey amins, and are read out and explained to the landlords and tenants daily, *parchas*, or slips containing the relevant entries, being given to the tenants, which they can get read and explained to them in the village at leisure, and so feel confidence in the correctness of the entries, or else state clearly what precise entry they object to. Entries which are the subject of dispute are made in red ink or are underlined in red; and disputes are entered in a separate list for the Settlement Officer's decision. The amins who write the records are under the supervision and control of the revenue officers as well as of the survey staff; in so far as the survey and measurements are concerned, they are under the supervision of the Survey Department alone. When the map and records have been prepared in the above manner, they are sent to the survey office in order that areas may be extracted. After areas have been extracted and entered in the records, all the papers, including the map, or a trace of the map, are made over to the revenue officers for final attestation.

Advantages of new system.

6. It will be seen that, as was stated above, the prominent feature of the new procedure is the amalgamation of the Survey and Settlement Departments as parts of one establishment working jointly towards a common end. Each cadastral camp is thus *de facto* the settlement office, and the Survey Inspectors and amins or patwaris here become the Settlement Officers' establishments for purposes for which separate establishments had hitherto to be employed in the field. The unit of survey is no longer the *kitta*, or *kota*, or *kiari*, which is a mere cultivating division of the field, and in many places liable to constant change, but it is the true field of the cultivator. Another radical change introduced is that demarcation, which was formerly carried out under the orders of the Settlement Officer by a separate staff, is now effected by the survey officials, who issue notices under the Survey Act to the proprietors to put up boundary marks. All these improvements appear to the Lieutenant-Governor to be excellent. The Chittagong procedure involves—(i) risk of unfair manipulation of boundaries by settlement amins; (ii) unnecessary survey of innumerable plots of *kotas*; (iii) unnecessary numbering which leads to error and confusion; (iv) want of supervision by the Survey Department over the record-writing amins. Under the Orissa procedure, on the other hand, which has been further improved in Bihar, the records are written simultaneously under the joint control and supervision of the Survey and Settlement Departments. This ensures greater despatch, precision and cheapness. In Chittagong the cost of survey, exclusive of record-writing, but including only the following processes, viz., traverse, detailed survey, completion of maps, area extraction, inking of maps after elimination of *kotas*, and entering of numbers, amounted in the year to Rs. 269-1 per square mile; in Orissa the whole cost of survey, inclusive of record-writing, was Rs. 179 per square mile in 1890-91, and Rs. 157 in 1891-92.

Training of local surveyors.

7. Another satisfactory feature of the year's work is the progress made in training local men in survey work. The employment of local agency on survey and settlements not only materially reduces the cost, but provides an efficient means of maintaining the maps and records when the work is complete. During the season under notice the following local establishments were put through a course of instruction and will be utilized as far as possible:—

In the Champaran district, 180 patwaris and their relatives.

In the Muzaffarpur district, 270 patwaris and their relatives and other local men (80 more were under training).

In Tippera, 300 local men (Bengalis).

In the coparcenary villages in Bihar, it is possible that some difficulty may be experienced in arranging for a patwari or other resident of the village to do the survey and record writing, but it is hoped that this difficulty may not be insurmountable. Section 5 of Regulation I of 1819 empowers the Collector, with the approval of the Board of Revenue, to appoint patwaris in such villages with or without reference to the proprietors, and if it is found that the latter cannot agree among themselves to nominate a joint patwari, it may be necessary to take action under this section.

In the Western Duars no local agency has been trained, nor are any local patwaries available. In Chittagong a few local man were trained when the operations first commenced, but they have not been utilized to any appreciable extent.

Petty settlements.

8. The distinct advance which has thus to be recorded in the system of conducting the larger survey and settlements is due to the enlightened experience of Colonel Sandeman, and to the unwearied supervision exercised by him and by Mr. Macpherson. It is not to be wondered at if the management of petty settlements shows as yet no corresponding improvement. It must freely be admitted that the conduct of these settlements by Collectors in the past has been very often unsatisfactory. The procedure has been slow and hesitating, and the work dilatory and expensive. In consequence of large additions to the duties of the Director of Land Records in connection with the more important surveys and settlements, Government has found it necessary to relieve him of the supervision of this class of work. It is possible that in some cases arrangements may be made to include the survey, the Khanapuri and the record-writing of such settlements in the professional survey programme, leaving the attestation to be done under the supervision of the local officers. But as a general rule the petty settlements must be carried out by District Officers in direct subordination to the Commissioner of the Division, and as they will no longer submit progress reports to the Director of Land Records, it becomes all the more essential for the Board to take the matter in hand, and to issue simple rules to ensure correct procedure and steady progress. What seems to be generally wanting is a correct understanding of the procedure and an intelligent forecast of the rate at which the work ought to be done. District Officers have often not the experience which is required to tell them how much an amin should be able to survey in a month and how large a staff is required to be put in the field so as to carry the fieldwork through the cold weather, leaving the hot weather for attestation and case work and not allowing the business to drag. The worst instances mentioned in the Director's Report are those in which the progress has been unreasonably slow, and unnecessary cost has been incurred and irritation caused. Thus, Khosalpur is a Government estate in Nadia with an area of 425 acres, contained in 13 villages; of which the survey began as far back as April 1889. A re-measurement appears to have been made in the year 1891-92. The survey should have been completed by two amins in a month. Out of 3,525 acres comprised in the Atmi Ward's estate in Shahabad, 1,250 acres were surveyed during the year, but no khanapuri or attestation appears to have been done. Lot Syamdaspur is a patni tenure in the Bankura district, having an area of 82 acres, the survey and settlement of which was sanctioned by the Commissioner of Burdwan on the application of the tenure-holder in March 1890. An amin was appointed to measure the estate in July 1891. He worked under the orders of the Settlement Officer, the Sub-divisional Officer of Bishenpur, and submitted his map and measurement papers in February 1892. The raiyats disputed the correctness of the measurement, and a fresh measurement was ordered at the expense of the tenants, which was completed in April 1892. The settlement was still pending at the end of September 1892. Such delay in disposing of a petty case is lamentable and must discourage proprietors from making applications under Chapter X of the Tenancy Act. In the case of the survey and settlement of nine petty private estates in Midnapore, the settlement cost on the

average about ten times as much as the survey—a proportion which appears to the Lieutenant-Governor most unreasonably high.

Standard procedure to be drawn up.

9. As a first step towards effecting an improvement in this branch of a District Officer's work, the Lieutenant-Governor considers that the Board may with advantage prepare a plain manual stating the procedure to be adopted for an estate of a given size, and specifying how many amins should be employed, when they should begin the work, and how long they should take over it, what system should be adopted for writing the khasras and khatians and giving out parchas while the survey is going on, how supervision should be exercised, how attestation should be effected after the khatians have been finished, and so on through the various stages of the work up to the publication of the record. Having before him these particulars worked out for a standard estate, a Collector ought to find little difficulty in adapting the model scale to any estate which he has to deal with, and he will thus be in a position to exact from his settlement subordinates a definite rate of progress. One factor no doubt is variable. The number of entries disputed will differ in different parts of the country according to the bitterness of party feeling, the nature of the holdings, or the character of the people, and this may make a material difference in the duration of the settlement. It may be expected, however, that even under this head experience will render it possible to work out average rates of progress for different areas which will afford some guidance in judging whether a particular settlement is being unduly delayed.

Progress of Work—Bihar Survey.

10. The following paragraphs show the progress made in the larger survey-settlements. The Bihar survey was sanctioned by the Government of India in their letter No. 2135—112, dated the 18th September, 1891. A notification under the Bengal Survey Act V (B.C.) of 1875, dated the 17th November 1891, was accordingly published in the *Calcutta Gazette* for the survey of the districts of Muzaffarpur, Darbhanga, Saran, and Champaran. The preliminary arrangements for the traverse survey in Muzaffarpur and in Champaran were made by His Honour the Lieutenant-Governor during his visit to Bihar in the early part of November 1891, with the advice of Mr. Finucane, immediately before the survey party took the field. Work actually commenced on the 19th December 1891, as there was some delay in issuing notices under the Survey Act on landholders and others, but it was not till about the 10th January 1892 that the survey party mustered in full strength. During the experimental survey under the Tenancy Act of the Muzaffarpur district in 1885-86, Colonel Barron had traversed 803 square miles, of which 414 square miles were cadastrally surveyed. Out of the 389 square miles remaining to be surveyed in 1891-92, village trijunction points were found marked by stones in 301 square miles, and this was the first area taken in hand during the season. The survey party worked till 17th June 1892, when it went into recess. The area traversed during this period was 1,247 square miles covered by 2,144 villages in Muzaffarpur, and 363 square miles covered by 238 villages in Champaran, or a total of 1,610 square miles, which is only 90 square miles less than the season's estimate. Including the 301 square miles of Colonel Barron's survey, over 1,900 square miles were made ready for cadastral work during the season 1892-93.

Employment of patwaris.

11. In March 1892, Colonel Sandeman was present at a meeting at Muzaffarpur presided over by the Commissioner of the Division. The Maharaja of Darbhanga and about 30 representative planters and zamindars attended. The object of the meeting was to explain to the parties interested the financial and other advantages of utilizing the village patwari for the purposes of the survey. The meeting unanimously approved the principles of employing local agency, but with the qualification that before the patwari was trained and employed at the zamindar's expense, he should be released from Government control. Mr. Gibbon, Manager of the Bettia estate, alone engaged to place the services of 250 patwaries at the disposal of the Survey Department by way of experiment. Subsequent to the meeting, Babu Ramdhari Sahai, the Secretary of the Landholders' Association, and Mr. (now Sir W.) Hudson asked permission to

send their patwaries for training. The Maharaja of Darbhanga also requested the Director of Bengal Surveys to give some of his patwaries a professional training, in order to save him the cost of employing amins to make yearly corrections in the maps of his estate. Sir Charles Elliott notes with satisfaction the favourable attitude of the zamindars with regard to the training of a local agency; and trusts that they will give further support to the operations as they become more assured of the care and accuracy with which the records are being framed. His Honour desires especially to place on record his acknowledgments to Mr. Gibbon for the support which he has given to the Survey and Settlement Officers.

Boundary pillars.

12. With regard to boundary pillars, the Director of Surveys reports that the stones used for marking trijunctions and certain other intermediate traverse stations were all of one pattern, viz., blocks of sandstone 2 feet long, rough hewn to $4\frac{1}{2}$ inches from the end, which was cut into a triangular prism of three sides. These were obtained from the Bengal Stone Company at Mirzapur. The Director of Surveys has made arrangements for the future with Messrs Burn and Company for new kinds of marks made of Raniganj pottery; those meant for ordinary traverse stations being only glazed pipes 2 feet long and 2 inches in diameter, costing 2 annas each, and those for trijunction points being cylindrical cones marked S ↑ I, measuring $2\frac{1}{2}$ feet long and 8 inches diameter, and costing 12 annas each. These when filled with clay will answer the same purpose as stones, and will be much cheaper.

Orissa.

13. The following statements show the area to be dealt with in Orissa, the survey work done previous to the season 1891-92, and that done during the season :—

District.	Permanently settled area.	Temporarily-settled area.	Area under revenue settlement.	Permanently-settled or revenue free area under settlement of rents.	Total of columns 4 and 5.	Work done before 1891-92.		Work done in 1891-92.		Remarks.
						Traverse.	Cadastral.	Traverse.	Cadastral.	
1	2	3	4	5	6	7	8	9	10	11
	S. miles.	S. miles.	S. miles.	S. miles.	S. miles.	S. miles.	S. miles.	S. miles.	S. miles.	
Cuttack ...	1,503	2,189	2,073	254	2,327	711	321	1,252	1,459(a)	(a) Includes 364 square miles canal irrigated land previously surveyed and now revised.

Total ...	2,066	5,670	4,746	448	5,194	1,567	1,037	2,007	1,766	

It appears that the survey work remaining to be done in the three districts at the end of September 1892 was as follows :—

	Traverse.	Cadastral.
Cuttack	Nil	320
Balasore	1,100	1,697

Floods in Cuttack.

14. Heavy floods interfered to a serious extent with the work in the Cuttack district. There was heavy rain on the 8th, 9th and 10th of June, and on the 11th the survey camps stationed on the banks of the Byturni river were swamped. So great was the rise of the floods that boats of 500 maunds capacity were rowed into the camp for the rescue of the survey records. It was due to the presence of mind and energy of Mr. Smart that the whole of the records of the season's work were not destroyed. The 1,459 square miles shown as cadastrally surveyed in Cuttack included 364 square miles of canal irrigated lands, in which the work consisted of bringing up to date the maps of 1878-79, and doing the khanapuri. This turned out unavoidably to be little less arduous than entirely fresh work.

Causes of delay.

15. The report of the Director of Surveys demonstrates clearly the fact that the work of record-writing was retarded owing to the want of precise rules. No less than four different forms of khasra and three different forms of khatian were introduced

during the season. The Lieutenant-Governor does not under-rate the difficulties which had to be contended with in adapting the standard forms to local conditions, and he is prepared to admit that the form to be finally adopted cannot be expected to be arrived at on the first attempt. But the amount of change in the Orissa forms was clearly excessive. It is also a matter for regret that precise instructions for the record-writing were not translated into the vernacular and placed in the hand of the amins until June 1892. As already noted, however, a definite plan of procedure was laid down during the year in consultation between the Survey and Settlement Departments. This plan was revised in December 1892, with the concurrence of the Lieutenant-Governor, in certain points of detail. It is hoped that no large changes will in future be necessary, and that the experience acquired in Orissa and Bihar will materially facilitate the preparation of final forms for all other settlements.

The report of the Director of Surveys shows that record-writing was done during the year in 1,145 square miles of Cuttack and 307 square miles of Puri. The Director of Land Records states that the record of rights and of rents had been attested in only 1,425 square miles up to the end of the year. The area of attestation given in square miles shows that attestation is considerably behind the record-writing. Twenty-three per cent. of the khasra entries in Cuttack, and thirty-two per cent. in Puri, were checked jointly by Europeans of the Survey Department, by Assistant Settlement Officers, and Native Inspectors; the superior officers of the Survey and Settlement Department only checked 5 per cent. of these, which seems to be hardly enough.

Cost of work.

16. The rates paid by the Survey Department for the various descriptions of work done in the Division, as compared with the previous season, were as follows, per square mile:—

	1890-91.			1891-92.		
	Rs.	A.	P.	Rs.	A.	P.
Traverse survey	34	4	9	29	9	7
Cadastral "	72	4	9	63	9	7
Khanapuri	27	0	0	34	0	0
Completion of records	45	7	2	29	12	0
Total ...	179	0	8	157	0	0

These figures show a saving of Rs. 22 per square mile, though the decrease in the rate for cadastral work is perhaps to a certain extent due to the inclusion in it of the 364 square miles of revision survey of canal irrigated lands in Cuttack. The rate for survey for the season under review was not quite 4 annas per acre, and must be considered satisfactory, having regard specially to the disadvantages already referred to, under which khanapuri work had to be done, and to the drawback to the full employment of local agency presented by the constitutional laziness and clumsiness of the Uriya amin. The improvements since effected in the procedure may be trusted to show a further reduction in the rates. The figures for khanapuri and completion of records are satisfactory.

Assessment work did not begin, nor was there any settlement of fair rents in Orissa in 1892-93. Soil maps constructed with the object of facilitating assessment have been prepared for 1,038 villages in Cuttack and 633 in Puri.

Chittagong.

17. The survey work done during the year consisted of 167 square miles of traverse and 462 square miles of cadastral survey in the head-quarters sub-division, and 130 square miles of traverse and 26 square miles of cadastral work in Cox's Bazar. The work remaining to be done at the end of the year comprised some 500 square miles of traverse survey in Chakaria, Moheskhal, and Teknaaf, and a cadastral survey of 110 to 120 square miles out of this area.

The total number of villages under survey and settlement is 933 in the head-quarters sub-division and 147 in the Cox's Bazar sub-division, including Ramu. Up to the end of the year the khasras of 825 villages of the head-quarters sub-division had been written by the khanapuri amins, but khatians had been completed and the area columns in the khasras filled up for only 655 villages, in only 355 of which had attestation been done. Khanapuri work of thana Ramu

was completed in 1890. No khanapuri had been done up to September 1892 for the rest of the Cox's Bazar sub-division. The slow progress of khanapuri work in Chittagong is due to the cumbrous procedure already explained. Existing rents were recorded and status determined for 119,871 raiyats and 70,393 other tenants in the Sadar sub-division during the year. Fair rents had been settled for a small number of tenants only down to the end of the year.

Western Duars.

18. The outturn of survey work for the year was 22·74 square miles of cadastral survey of jotes scattered over the whole tract, which had been omitted in previous seasons for various reasons, 327·53 square miles of forest survey on the 4″ scale, 337·17 square miles of waste land survey on the 2″ scale, and 17·52 square miles comprised in two blocks of tea land, which the Settlement Officer had in the previous season decided to reserve against tea. Survey work in the Western Duars came to a close in the year.

The unit of the map in the Duars is a cluster of jotes. There are no villages in the survey sense of the word, the territorial divisions being parganas or taluks, which are too large for units. Altogether 10,303 jotes and khas blocks have been under survey and settlement. Attestation of all the jotes, with the exception of 946, had been completed up to the end of the year. Settlement of rent and revenue had been completed only in 4,170 jotes comprising the Mainaguri tahsil. In this tahsil the revenue has been raised by the settlement from about Rs. 1,28,000 to Rs. 2,09,000; and the Lieutenant-Governor has learned with satisfaction that the new revenue has been collected for the first year without any difficulty.

The smaller Government estates.

19. Arrangements have been made for the survey by a professional party during 1892-93 of the Jaipur khas mahal in the Bogra district, covering an area, in a fairly compact block, of 44 square miles, and of the Pataspur estates in Midnapur, with an area of 56½ square miles. The smaller Government estates under settlement were the following. In all of these the survey was non-professional, with the exception of some of the estates of Backergunge:—

Burdwan Division.—There was only one small estate Bhetia in Midnapore. The completion of the settlement awaits a decision on the position of the aymadars, which is stated to be analogous to that of the itmamdars of Chittagong.

Presidency Division.—The only estate under settlement under the Tenancy Act was a petty one named Khosalpur in the Nadia district. Though the settlement is reported to have been concluded in October last, the final report has not yet been submitted. The extraordinary delay in completing this little settlement has already been noticed.

Dacca Division.—One estate named Jowar Joymongal in the Dacca district, 14 small estates called the Kalkini estates in Faridpur, and 21 Government estates with an aggregate area of nearly 95 square miles in Backergunge, were under settlement under the Tenancy Act. The inordinate delay in the case of the first-named estate has been already mentioned. The settlement of the Kalkini estates was originally taken up in 1889 under the Regulations, but in 1891 the proceedings were brought under the Bengal Tenancy Act. After some correspondence it was decided that no new settlement would be required if the survey previously made proved to be correct after testing 10 per cent. of the field measurements. The settlement of these estates has proceeded very slowly, and it has been found necessary, since the close of the year, to appoint a special Settlement Officer for them.

The settlement of 17 of the Backergunge estates, with an area of 52,590 acres, was in charge of Mr. Dwija Das Dutt. Babu Peary Mohan Basu, Settlement Officer of the Dakhin Shabazpur Ward's Estate, was in charge of three with an area of 6,520 acres, while the Sub-divisional Officer of Bhola was in charge of the remaining one, the area of which is 1,062 acres. The description of the work done during the year, given in the report of the Director of Land Records, shows the work done, but does not show how much remained to be done at the end of the year.

Chittagong Division.—Sixteen small estates in Tippera and three in Noakhali were under settlement under the Tenancy Act. In the case of six of the

Tippera estates all proceedings from demarcation to confirmation were concluded within the year. This is satisfactory, and should be the usual rule in all such settlements. The settlement of these six estates resulted in an increase of Rs. 1,068 over the previous rental of Rs. 2,023. In the case of seven other estates in this district the proceedings were originally started under the Regulations, but eventually the Bengal Tenancy Act had to be applied. The settlement of these estates was also completed within the year, though copies of khatians remained to be distributed. The settlement of another estate, Maizurdi, standing over from the previous year, was also completed, while fair progress had been made in the settlement of the remaining two. In the Noakhali district there were three estates, the settlement of only one of which was completed during the year and awaited the final sanction of the Board; in the case of the other two, settlements of fair rents have been made, but the proceedings have not yet been completed. In one of these the amins' papers were prepared very badly and took an unduly long time to examine and attest.

Patna Division.—Only two small estates with an area of 2,014 acres were under settlement under the Tenancy Act. The settlement of both was concluded during the year, but it is not stated when it was commenced. The rent-roll of the two estates was increased from Rs. 2,721 to Rs. 3,437 in the case of one, and from Rs. 4,848 to Rs. 5,565 in the case of the other. The cost incurred was only Rs. 268 in the former and Rs. 235 in the latter, which is satisfactory.

Wards' Estates.

20. The Wards' estates under survey and settlement were portions of the Burdwan Raj Estate situated in Burdwan, Bankura, Midnapore, Hooghly, Nadia, containing an aggregate area of 141 square miles (exclusive, however, of Bankura), and Kujang with an area of over 226 square miles in Cuttack; the Talipabad estate in Dacca, containing an area of 94 square miles; the Dakhin Shabazpur estate in Backergunge containing 149 square miles; the Serail estate in Dacca containing nearly 277 square miles; the Kanika estate in Cuttack containing 441 square miles; and a small estate named Atmi in Shahabad.

The Manager of the Burdwan Raj Estate reported that he had been enabled to recover possession of some missing villages by the help of the survey work of previous seasons; and by his request further survey operations were undertaken in the Bankura district under Government Notifications under the Tenancy and Survey Acts, dated November and December 1891. The work allotted for professional survey during the year was the traverse survey of 650 square miles in Bankura, and the cadastral survey of 62½ square miles scattered over Burdwan and Bankura districts. The records of the Burdwan Raj regarding lands in Bankura were found to be very incomplete and misleading, and out of 62½ square miles claimed, the Raj officials could only point out an aggregate area of 13 square miles as actually held by the Raj. The outturn of work in these two districts was 621 miles of traverse survey and 13 square miles of cadastral work, while the cost, owing partly to the defective state of the Raj records, and partly to obstruction on the part of the tenants, was nearly double of what it would have been under more favourable circumstances. The settlement of the Sujamutha estate in Midnapore, appertaining to the Raj, was completed during the year by Mr. Dejen Lala Roy, except with regard to the records of one village. The cost of work was ten annas for survey and fifteen annas for settlement. The report is awaited. The survey of the Kujang Estate in Cuttack, belonging to the Burdwan Raj, which began in 1889, had been completed by professional agency before the beginning of the year under review. The settlement work ended in April 1892.

Much progress does not appear to have been made in the survey and settlement of the Talipabad Estate in Dacca; the process of framing the records has been slow and expensive, and the best efforts of the Settlement Officer are required to bring the operations to a satisfactory conclusion within reasonable limits of expenditure. The survey of the Dakhin Shabazpur Ward's Estate was completed during the year; fair progress was also made in the settlement of this and of the Serail Ward's Estate. The completion report for the latter settlement is awaited.

Private Estates.

21. The most important survey of a private estate undertaken under the Tenancy Act during the year was that of Chakla Roshnabad in Tippera belonging to the Maharaja of Hill Tippera. The area of the Maharaja's estates in British territory is 572 square miles, of which about 16 square miles are in the Sylhet district of Assam. The survey and settlement have been undertaken on the application of the Maharaja and at his cost. He has deposited one lakh of rupees to meet the cost. A small section of the Chittagong survey party was despatched to Tippera for this work towards the middle of April, and completed the traverse survey of 150 square miles. The Maharaja had expressed a wish that the operations should be spread over at least two seasons in order to give him time to protect his own interests. The attitude of the tenants was obstructive at the outset, but matters mended when the Collector, Mr. Greer, visited the Survey camp in May and explained to the talukdars the objects of the survey. Owing to the complicated nature of the tenures, the minute sub-infeudation, the litigious character of the tenants, and the number of long-standing disputes between them and their landlord, it seems probable that the settlement of these estates will be attended with special difficulties and a rapid rate of progress cannot be looked for.

22. The Lieutenant-Governor desires to acknowledge the admirable work done during the year by Colonel Sandeman and Mr. Macpherson in connexion with the introduction of a more uniform system of Survey and Settlement into Bengal. Both of these officers have had great difficulties to contend with, and their duties, which have been exceptionally heavy, have been performed with the highest zeal and ability. The thanks of the Lieutenant-Governor are also due to Messrs. Slack and Allen for the progress made in the Chittagong Settlement, and Mr. D. Sunder for that in the Western Duars. Lieutenant Crichton also deserves credit for the ability with which he has conducted the extensive and difficult survey operations in Orissa. Mr. H. R. Reily, the Settlement Officer of Orissa, died of an accident shortly after the close of the year under report. Munshi Nandji has already been commended for his excellent report on the settlement of the Dubalhati Estate.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Secretary to the Government of Bengal.

REPORT ON THE STATE OF THE SALT MARKET FOR THE FOURTH QUARTER OF 1892-93.

No. 440B., dated Calcutta, the 23rd May 1893.

From—L. P. SHIRRES, Esq., Offg. Secretary to the Board of Revenue, L.P.,
To—The Secretary to the Government of Bengal, Financial Department.

SALT.

D. R. LYALL, Esq., C.S.I.

I AM directed by the Board of Revenue to submit the following report on the state of the salt market for the 4th quarter of 1892-93, comprising the months of January, February, and March 1893.

2. The quantity of salt of every description cleared during the quarter under report amounted to 24,22,398 maunds, against 26,48,867 maunds in the previous quarter, and 22,12,559 maunds in the corresponding quarter of the previous year; and the net amount of duty levied thereon was Rs. 56,82,664, against Rs. 62,46,890 in the previous quarter, and Rs. 51,96,684 in the corresponding quarter of the previous year. In all cases fractions are omitted.

3. The quantity of excise salt removed from the golas in Orissa during the quarter under review, and the quantity which remained in store at the close of the quarter, are shown in table I:—

TABLE I.

	Cuttack.	Puri.		Balasore.	
		MDS.	S.	MDS.	S.
Balance at close of the last quarter	......	23,949	10	284	0

Total ...	......	4,041	0	34	0
Balance at close of the quarter	......	19,908	10	250	0

4. The total sale of excise salt during the quarter under review amounted to 2,408 maunds, against 33,621 maunds in the previous quarter, and 4,073 maunds in the corresponding quarter of the previous year. The total amount of excise salt on which duty was paid during the quarter was 2,408 maunds.

5. The subjoined table shows in detail the importations into the port of Calcutta and the total clearances of sea-imported salt during the quarter under review compared with the figures of the corresponding quarters of the previous two years:—

8. The quantity of salt despatched by the East Indian Railway to stations beyond Buxar during the quarter under review amounted to 1,721 maunds 10 seers, as noted in the margin, against 5,508 maunds in the previous quarter, and 3,098 maunds 10 seers in the corresponding quarter of the previous year.

		Mds.	s.
January	...	688	20
February	...	......	
March	...	1,032	30
Total	...	1,721	10

9. The quantity of saltpetre-salt removed from the refineries on payment of duty amounted to 11,853 maunds against 7,017 maunds in the previous quarter.

10. The shipments of Liverpool salt for the port of Calcutta, according to published market reports, were as follow:—

			Tons.
January	...	...	14,100
February	...	...	11,950
March	...	...	26,430
	Total	...	52,480

It is reported that 3,000 tons of salt were shipped from Hamburg for the port of Calcutta.

11. Table V shows the average wholesale price per 100 maunds of Liverpool and other descriptions of salt during each fortnight of the quarter:—

TABLE V.

Description of Salt.	Fortnight ending 15th January 1893.	Fortnight ending 31st January 1893.	Fortnight ending 14th February 1893.	Fortnight ending 28th February 1893.	Fortnight ending 15th March 1893.	Fortnight ending 31st March 1893.

	Total ...	44,770 0	43,436 0	1,18,454 29 0	1,00,719 15 0

No transactions in sea-imported salt have been reported for the quarter from the ports of Cuttack, Puri, and Balasore.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 3rd June 1893.

No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.				
BURDWAN DIVN.				
1	Burdwan	June 3, '93	2·84	Weather—hot and cloudy. Cultivation actively going on. Fodder and water sufficient. Prices of common rice:— Srs. Burdwan ... ... 10 to 13 } Kalna ... ... 10 to 13 } Katwa ... ... 13 } per rupee. Raniganj ... ... 13 }
2	Bankura	„ 3, '93	1·40	Weather—hot and generally cloudy. Sowing of *noan dhan* going on. Fodder and water sufficient. Prices of common rice:— Srs. Sadar ... ... 11 } Vishnupur ... ... 11½ } per rupee.
3	Birbhum	„ 3, '93	3·04	Weather—occasionally cloudy with heavy rain in the subdivision. Transplantation of sugarcane in progress. Lands are being prepared for the sowing of paddy. Fields look green and pasturage is sufficient. Price of rice 12 to 14½ seers per rupee.
4	Midnapore	„ 3, '93	1·10	Heavy rain in all three subdivisions. Prospects over most of the district good, but some damage has been caused by recent cyclone to *til* and young paddy. Prices of common rice:— Srs. Sadar ... ... 11 } Contai ... ... 13 } Tamluk ... ... 10 } per rupee. Ghatal ... ... 10 to 11 }
5	Hooghly	„ 3, '93	1·73	Weather—showery since the cyclone passed; now growing warmer. Injury has been done to sowings of winter rice on the lowest lands, and ploughing has been temporarily stopped until the ground becomes dry enough to work, otherwise the heavy rain will do good and facilitate cultivation hereafter. Prices of common rice:— Srs. Sadar ... ... 10 to 11 } Serampore ... ... 10 to 11½ } per rupee. Jahanabad ... ... 10 to 12½ }
6	Howrah	„ 3, '93	2·78	Weather—variable. The late cyclone has damaged the jute and early paddy crops. Some damage has also been caused to the young sugarcane. Condition of cattle good. Fodder and water-supply sufficient. Rice 9 to 11 seers per rupee.
PRESIDENCY DIVN.				
7	24-Parganas	„ 3, '93	2·52	Weather—hot and cloudy. Cultivation is retarded to some extent in consequence of excessive rain. *Aus* and jute seedlings in some places are still under water. Supply of fodder and water sufficient. No cattle-disease prevalent. Prices of common rice:— Srs. Ch. Sadar ... ... 10 to 12 12 } Barasat ... ... 10 8 } Basirhat ... ... 11 7 } per rupee. Diamond Harbour ... ... 12 4 }
8	Nadia	„ 3, '93	1·09	Weather—seasonable. The heavy rain of the preceding week has done good to the sowing of the *aman* crop and to the standing early paddy plants and sugarcane. Prices stationary. Fodder and water sufficient.
9	Khulna	„ 3, '93	3·36	Weather—bright and hot with occasional showers. The late heavy rain has done some damage to *boro* paddy in Bagerhat and to cultivation of *aus* and *aman* paddy elsewhere. Agricultural work again in progress. Coarse rice selling at from 10 to 13 seers per rupee. Fodder and water for cattle sufficient. Cattle-disease in two thanas.
10	Jessore	„ 3, '93	2·99	Weather—rainy and windy in the beginning, seasonable afterwards. The rainfall of the week has delayed the sowing of paddy and submerged the young plants on low lands. Some injury has also been done to *til* and jute. If the weather continues fair the loss will not be great. Prices have risen. Fodder and water for cattle sufficient.
11	Murshidabad	„ 3, '93	3·72	Weather—very hot and cloudy with occasional showers. Sowing of jute commenced. Sowing of *bhadoi* finished and that of *aman* continues. Indigo, sugarcane and mulberry promising. Harvesting of *til* and *boro* paddy continues. Fodder and water sufficient for cattle. Coarse rice sells at 11 seers per rupee.

	No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concld.*					
CHITTAGONG DIVN.	12	Chittagong	June 3, '93	14·83	Weather—cloudy and hot. Prospects of crops good. Prices stationary. Condition of cattle generally good. Supply of fodder sufficient.
	13	Noakhali	" 3, '93	3·92	Weather—cloudy with occasional rain. About 8 annas of young *aus* plants damaged by heavy rain. Resowing commenced. Sowing of *aman* also begun, but progress slow. No lack of fodder and water. No cattle-disease. Prices stationary.
	14	Tippera	" 3, '93	6·73	Weather—cyclonic; heavy storms of wind and rain with intervals of warm weather. Crops on low lands damaged by heavy flood. *Aman* doing well. Jute much improved by rain.
	15	Chittagong Hill Tracts.	" 2, '23	19·24	Weather—rainy throughout the week; unusually heavy rain on the 28th and 29th May. Sowing in *jums* still continues. Ploughing in low lands for winter rice commenced. No cattle-disease reported. Common rice being sold at 8 seers per rupee.
DACCA DIVN.	16	Dacca	" 3, '93	4·54	Weather—cloudy and rainy. Recent rain has done good to the standing crops, but ploughing and sowing in some places were stopped by the incessant showers. Fodder available. No cattle-disease. Common rice selling at from 9 to 12 seers per rupee.
	17	Faridpur	" 3, '93	7·24	Weather—unsettled. Damage done to late sowings by recent heavy rain. Sowing continues where possible, but must be generally short throughout the district. The *boro* harvest has been generally 16 annas, and the standing crops are doing well. Common rice sells at from 11 to 12 seers per rupee. Condition of cattle good except for disease in two thanas.
	18	Backergunge	" 3, '93	4·59	Weather—cyclonic with heavy rain till 28th May throughout the district. Since then showery. Prospects of crops fair. The heavy rain with high tides has done much damage to the standing crops. Common rice selling at from 9 to 13 seers per rupee. Fodder and water sufficient.
	19	Mymensingh	" 3, '93	7·37	Weather—cloudy and hot. Prospects of crops good. Common rice selling at from 10 to 13 seers per rupee. *Boro* rice is selling at 16 seers per rupee. Health of cattle good. Supply of fodder and water sufficient.
RAJSHAHI DIVN.	20	Dinajpur	" 3, '93	5·30	Weather—cloudy and rainy during the whole week with occasional breaks. The rain has done good to jute and *bhadoi*. Sowing continues. Price of rice stationary. Condition of cattle good. Supply of fodder and drinking water sufficient.
	21	Rajshahi	" 3, '93	4·39	Weather—very rainy and disagreeably steamy. The rain, which seems to fall somewhere or other every day, is very injurious to the crops; sunshine for several days is necessary. No cattle-disease has been reported from anywhere. Supply of water and fodder ample. Price of rice varies from 11 to 14 seers per rupee.
	22	Rangpur	" 3, '93	4·92	Weather—cloudy, rainy and seasonable. The showers of the week have done much benefit to the standing crops. Price of common rice stationary at from 11 to 13 seers per rupee.
	23	Bogra	" 3, '93	9·85	Weather—unsettled. Some damage has been done to standing crops by the heavy rain in the early part of the week. Prospects of crops are still favourable. Common rice sells at 12 seers per rupee. Fodder and water sufficient.
	24	Pabna	" 3, '93	6·30	Weather—cyclonic in the beginning of the week; partially cloudy and rainy the rest of the week. The heavy rain and storm have spoiled some *til* and jute and the *aus* crop on low land. Transplantation of *aman* retarded owing to incessant rain. Price of common rice at Pabna is 11 seers per rupee and at Sirajganj Rs. 4 to Rs. 5-4 per maund. Fodder and water-supply sufficient.
	25	Darjeeling	" 3, '93	0·89	Weather—warm but foggy and rainy. *In the hills.—Bhutta, marua, kangni, bhadoi dhan* progressing well. *Phaphar* coming to perfection. *In the terai:*—Jute doing well. *Bhadoi* sown. Prices of coarse rice:— Srs. Hills ... ... 10 } per rupee. Terai ... ... 11 to 12 } per rupee.
	26	Jalpaiguri	" 3, '93	11·22	Weather—wet. The rain during the week has done good to *bhadoi* and jute crops. Weeding retarded. Price of rice 12 seers per rupee. Fodder and water sufficient.

	No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR.				
BHAGALPUR DIVN.	27	Monghyr June 3, '93	1·46	Weather—moist and cloudy with variable winds. *Bhadoi* and paddy sowings being vigorously pushed on. Indian-corn has germinated well. *Cheena* harvesting complete. Indigo and sugarcane in flourishing condition. Cattle-disease in Kharakpur and Nawadih. Fodder and water sufficient. Prices of coarse rice:— Srs. Sadar ... ... 13 to 14½ } per rupee. Begusarai ... ... 14 Jamui 12½
	28	Bhagalpur „ 3, '93	1·46	Weather—warm and close. Sowings in progress. The late rain in the two northern subdivisions has done good. Spring sowings of indigo are doing well. Price of common rice 14½ seers per rupee.
	29	Purnea „ 3, '93	0·45	Weather—sultry, cloudy. Local storms frequent. Sowing of jute, *bhadoi* and *aghani* complete; doing well where rain has fallen, but elsewhere rain is badly wanted. *Kauni* harvest in progress. Fodder and water plentiful. Prices slightly rising. Rice at— Srs. Sadar ... ... 12 } per rupee. Araria ... ... 16 Kishanganj 11
	30	Malda „ 3, '93	4·16	Weather—hot and cloudy with occasional heavy showers. *Boro* rice being reaped; estimated outturn 16 annas. The rain has much improved the prospect of *bhadoi* crops. Price of coarse rice varies from 11 to 14½ seers per rupee. Fodder and water ample.
	31	Sonthal Parganas „ 3, 93	2·52	Cyclonic weather with wind and rain at the beginning of the week; now settling to fair and warm. *Boro dhan* being reaped. Ploughing going on actively. Early rice and Indian-corn promise well, and sugarcane flourishing. Fodder and water abundant. Price of rice from 11 to 13 seers per rupee—slightly easier than last year.
PATNA DIVISION.	32	Patna „ 3, '93	0·82	Weather—cloudy. Harvesting of *cheena* commenced. The rain has been beneficial to the sugarcane crop and to the preparation of land for *bhadoi* and paddy sowings. Broadcast paddy is being sown. Prices of common rice:— Srs. Patna ... ... 15 } per rupee. Barh ... ... 13¼ Bihar ... ... 16¾ Dinapore 13
	33	Gaya „ 3, 93	2·31	Weather—for the most part of the week cloudy and cool. Ploughing and sowing of *marua* and paddy seeds in progress. The rain during the week has been highly favourable to ploughing. Mango a total failure. Water and fodder sufficient. Price of rice 14 to 15 seers per rupee.
	34	Shahabad „ 3, '93	2·50	Heavy showers fell during first part of week. Since yesterday (2nd) afternoon sky has cleared and light west wind blowing. The rainfall has been most opportune for paddy and *bhadoi* sowings. Sugarcane doing well. *Cheena* being harvested. Prices stationary. Fodder and water abundant.
	35	Darbhanga „ 3, '93	1·17	Weather—hot and occasionally cloudy. Paddy, *mung* and indigo doing well. *Bhadoi* sowings commenced. Price of common rice varies from 14 to 16 seers per rupee. Fodder for cattle sufficient.
	36	Muzaffarpur „ 3, '93	0·29	Weather—fair but occasionally cloudy. Paddy crops in low lands which have been sown are doing well. Preparation of land for *bhadoi* sowing is in progress. *Makai* being sown in places. No disease among cattle. Fodder and water-supply sufficient.

No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR—*concld.*				
Patna Division—concld.				
37	Saran	June 3, '93	1·12	Weather—unsettled and showery. Prospects of crops good. Fodder and water sufficient. Prices of common rice:— Srs. c. Chapra ... ... 13 0 per rupee. Siwan ... ... 12 0 per rupee. Gopalganj ... . 13 5 per rupee.
38	Champaran	„ 3, '93	2·65	Weather—warm. Paddy is being sown somewhere, and at other places where it has already been sown grass is being weeded out. *Cheena* looks well. Prospects of indigo fair. Prices stationary. Fodder and water sufficient.
ORISSA.				
Orissa Divn.				
39	Cuttack	„ 3, '93	0·01	Weather—cloudy and warm. The late storm has done some damage to the paddy seedlings. The water on the fields delays sowing. Fodder and water ample. Prices of common rice:— Srs. c. Srs. c. Sadar ... ... 10 0 to 13 0 per rupee. Jajpur ... ... 13 2 to 18 6 per rupee. Kendrapara ... ... 9 0 to 17 0 per rupee. Banki ... ... 15 12 per rupee.
40	Puri	„ 1, '93	2·90	Weather—cloudy. Much damage has been done to *dalua* paddy by late rain, which has also retarded sowing of *sarad*. Prices of rice stationary.
41	Balasore	„ 3, '93	2·86	Weather—very cool for time of year. Ploughing stopped by heavy rain of last week. Prices stationary.
CHOTA NAGPUR.				
South-West Frontier Agency.				
Chota Nagpur Divn.				
42	Hazaribagh	June 3, '93	4·86	Weather—very unsettled: stormy with much rain since 30th May. Sugarcane doing well. Mango poor. Ploughing and sowing in vigorous progress all over the district. Fodder and water sufficient. Prices of common rice:— Srs. Head-quarters ... ... 10 to 14 per rupee. Giridi ... ... 8 to 12 per rupee.
43	Lohardaga	„ 3, '93	3·06	Weather—cloudy. Ploughing and sowing of *gora* and *done* paddy continue. Common rice selling at 13 seers per rupee. Fodder and water sufficient.
44	Palamau	„ 2, '93	1·10	Weather—cooler. Showers in almost all parts of the district. Fields are being prepared. Prices stationary. No cattle-disease. Fodder and water sufficient.
45	Singhbhum	„ 3, '93	2·10	The rains have apparently set in. Crops doing well. Sowings going on everywhere. Common rice selling at 12 seers per rupee except at Ghatsilla, where the price is 10 seers. Cattle-disease reported from some thanas.
46	Manbhum	„ 3, '93	0·99	Weather—warmer and much more pacific. Ploughing has been resumed. Prospects so far fair. Rice 10 to 13 seers per rupee. Fodder and water-supply ample.

* Means of 5 days. | † Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same peroid
Th *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10
rainfall the normal mean are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station
district, *i.e.*, from total rainfall at the subdivisional stations in the district sending in returns divided by the number of stations. A rainy day is one o

for the week ending Saturday, the 3rd of June 1893.

Variation from normal mean.	Mean 8 A.M. temperature.	Average humidity at 8 A.M.	Average cloud amount at 8 A.M.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. Of week. Mean for district.	Of week. Normal mean.	Of week. Average number of rainy days.	Of week. Normal number of rainy days.	Rainfall. Since 1st of month. Mean for district.	Since 1st of month. Normal mean.	Since 1st of month. Variation.	Since 16th May 1893. Mean for district.	Since 16th May 1893. Normal mean.	Since 16th May 1893. Variation.	District.

Explanation.—... indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns a[re] wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at le[ast] 0·1 inches of rain has fallen.

CALCUTTA, *the 6th June* 1893.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 3RD JUNE 1893.

At the end of the previous week the depression, though of much less importance, was over the central districts moving in a north-easterly direction, and was causing heavy rain and strong winds within the area of lowest pressure. It continued its slow motion to the north-east, and the centre of the disturbance on the first day of the present week was between Dacca and Sirajganj. By this time the influence of the depression did not extend to Bihar, where pressure was falling slightly and winds had become easterly, but in all the central districts cyclonic winds of north-westerly direction were still blowing. On the 29th a very shallow depression remained, extending over the eastern districts of Bengal and the greater part of Assam, with lowest pressure between Mymensingh and Silchar. General rain was falling in the parts affected by the depression, though not very heavily, as the largest fall reported was under 3 inches, but with its final disappearance on the following day very heavy rain fell in Cachar, and weather in Bengal began to be more generally unsettled.

While the depression was over the eastern districts of Bengal, westerly or north-westerly winds prevailed over the greater part of the province. These westerly winds were comparatively dry, and there was very little rain until after the depression had filled up. On 30th May gradients and wind directions had become more normal, and cloudy rainy weather prevailed till nearly the end of the week except in Orissa, where rainfall was very partial. The rise of pressure which followed the depression continued till there was considerable excess, and on the 31st of May there was an area of relatively high readings over the north of the Bay and Lower Bengal. Within this area excess was more than a tenth of an inch, and as readings were almost normal in the south of the Bay and also along the foot of the Himalayas, gradients were less steep than usual in the north of the Bay and steeper in Bengal. This high pressure area in the north of the Bay has had an important influence in preventing rainfall in the east of the Bay and afterwards in Bengal; but it was not till the last day of the week that the effect became generally apparent at inland stations. From 31st May till 2nd June general rain fell in all districts, and on the 3rd, the last day of the week, numerous falls were received in the northern districts, but they were lighter in amount. Owing to the cloudy weather which prevailed during the greater part of the week, very low day temperatures were general, but minimum readings were not usually much below the normal. The means were at times more than 10° in defect, and even at the end of the week, when skies were clearing, there was defect of more than 5° in the western districts.

Pressure rose very rapidly in Lower and Eastern Bengal after the passage of the depression, and readings were soon above the normal in all districts. The distribution was very nearly normal on the 30th May, when the largest difference was ·06 inch in Orissa; but on the following day excess varied from ·05 inch in the extreme north to ·15 inch in Orissa. Changes were slight on the 1st of June, but a brisk fall prevailed on the 2nd and 3rd, after which readings were again very nearly normal. The means for the week show little sign of the large variations which occurred at the beginning, and the greatest difference from the normal is very little over a twentieth of an inch.

Temperature, as stated above, has been much below the normal by day, but not to any great extent at night, the difference in maximum readings being largely due to the cloudy weather which prevailed throughout the week. The means for the large divisions are all below the normal, the largest defect being in the western districts. For Chota Nagpur it is 7·5°, South-West Bengal 4·9°, South Bihar 4·1°, Orissa and Assam about 2·5°, and the other districts between 1° and 2°.

Rainfall.—General and in some cases heavy rain has fallen in all districts except Orissa and the adjacent parts of South-West Bengal and Chota Nagpur, which received very scattered showers between the 29th and 31st. General rain began to fall in Behar on the 31st; but in North Bihar, though the rainfall was fairly well distributed, the amount was generally light, and the mean for the week is only slightly above the normal. For Orissa the mean fall is very little over half the normal fall, but in all the other districts there has been a rather large excess. In North Bengal excess is 2·1 inches, in East Bengal 4·48 inches, and in South-West Bengal, Chota Nagpur, and South Behar between 1 and 2 inches.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 3rd of June 1893:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.						RAINFALL.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1893.

The total fall from 1st January to 3rd June 1893	24·37
The average fall of the corresponding period for 24 years, Surveyor-General's Office	10·28

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; t, thunder; <, lightning; p, passing temporary showers; lr, lightning reflection.

EMIGRATION TO BRITISH AND FOREIGN COLONIES FROM THE PORT OF CALCUTTA, DURING THE YEAR 1892.

GENERAL DEPARTMENT—EMIGRATION No. 1690.

Calcutta, the 8th June 1893.

RESOLUTION.

READ—

The Annual Report on Emigration from the Port of Calcutta to the British and Foreign Colonies for the year 1892.

THE report for the past year, the body of which was submitted at the prescribed time, is sufficiently full and fairly concise, and is accompanied by two maps showing the native districts of emigrants to the Colonies and the districts in which they were registered, and illustrating by different shades of colour the proportion which the number of emigrants bears to the resident population. The maps were received some days after the receipt of the report. It is necessary that the report should reach the Government in a complete form by the prescribed date, and steps should be taken to ensure this in future.

Administrative measures.

2. Some amendments were made during the year in the rules in force under the Colonial Emigration Act XXI of 1383, and full-powered steamers engaged as emigrant vessels to the colonies, and using either the Cape or Canal route, were exempted conditionally from the rules relating to artificial ventilation.

Requisitions. Recruiting and despatch of emigrants.

3. The demand for adult Indian emigrants fell from 13,867 in 1891 to 10,558 in 1892, owing to requisitions having been made by only five out of the eight colonies to which emigration from India is at present permitted. Demerara indented for 4,555, Trinidad for 2,500, Natal for 900, Fiji for 1,370, and Surinam for 1,233 adults. The indents of the first three colonies were smaller than those of the previous year, while those of Fiji and Surinam were appreciably larger. In the cases of Natal and Fiji, the requisitions were more than met, 123 adults being supplied in excess, but in the cases of the other three colonies, the supply fell short by 264 adults. The deficiency of 83 in the case of Surinam was made up in January of the present year. On the whole 10,416½ adult coolies were supplied during the year as against 10,558 indented for.

Owing to the reduced requisitions the number of licensed recruiters decreased from 1,003 to 857, and the number of registrations from 25,613 to 17,225. Of the 17,225 emigrants, including children, registered in the districts, 14,196 reached the Calcutta depôts, and of these 11,133 were despatched to the respective colonies in seventeen sailing ships and three steamers. The number despatched in 1891 was 15,668. It is satisfactory to find that the prescribed proportion of 40 women to every 100 men embarked was more than complied with, and that in the case of Surinam the percentage of married to single women rose from 52·5 to 64·3.

Areas of recruitment and registration.

4. The North-Western Provinces and Oudh still continue to be the largest recruiting grounds for the colonies, but there is a tendency to have recourse more largely to the districts of Bengal and Bihar. Thus the proportion of emigrants drawn from the North-Western Provinces fell from 67 per cent. to 59½; Oudh contributed 22 per cent. against nearly 24 per cent. in the previous year; while the proportion of natives of Bengal and Bihar rose from 7 per cent. in 1891 to nearly 16 per cent. in 1892. The following table compares the province of registration with that of birth as declared by the emigrants:—

		Bengal.	Bihar.	North-Western Provinces.	Oudh.
Number registered in	1892	2,126	3,012	9,212	2,875
	1891	2,047	3,347	15,208	5,011
Number who declared themselves to be natives of	1892	2,743		14,028	
	1891	3,400		13,983	5,173

Besides the four provinces indicated above, 454 emigrants declared themselves to be natives of other provinces and places, and a relatively large number is shown to have come from native States. Azamgarh, Ghazipur, Basti, in the North-Western Provinces, and Shahabad in Bihar, which stands fourth on the list with a supply of 1,177 emigrants as against 2,229 from Azamgarh, maintained their places as the chief recruiting districts. A larger number of emigrants was registered than in the previous year in the districts of the 24-Parganas, Bhagalpur, Monghyr, Patna, and Shahabad. The district of the 24-Parganas, which shows 1,407 registrations, cannot, however, be compared with the others, owing to the fact that a large proportion of the recruiting in that district is carried on among coolies brought to Calcutta by unlicensed recruiters as free emigrants—a practice which, though not free from objections, cannot be checked.

Disappearance and rejection of emigrants.

5. A very marked advance has been made in the process of accounting for emigrants who, after being registered in the districts of recruitment, reach the Calcutta depôts. In the past year only 584 registered emigrants have not been

accounted for as against 4,753 in 1890 and 6,755 in 1891. This improvement is no doubt due to the agents visiting their mufassal depôts, and insisting on details of all coolies admitted into the depôts being registered. With the introduction of sub-depôt registers since the close of the year under review, it may be expected that every registered emigrant will be accounted for by the agencies in future. Of the registered emigrants who did not reach the Calcutta depôts, no less than 1,365 were rejected as unfit for emigration. Although this compares favourably with the figure of 1891, viz., 2,057, it seems desirable, both in the interests of intending emigrants as well as of the indenting colonies, that something should be done to ensure that none but really fit persons are selected as emigrants. As pointed out by the Protector of Emigrants, two courses suggest themselves. The first is that the Emigration Agents should appoint qualified medical examiners to test the fitness of the persons recruited prior to their being presented for registration. The other is to charge a registration fee in order to ensure a proper class of intending emigrants being placed before registering officers. If the former means cannot be adopted, it may be necessary to have recourse to the latter, but the Lieutenant-Governor would be glad if this could be avoided. Another point of great importance is to reduce as low as possible the number of emigrants declared unfit for despatch after arriving in Calcutta. The proportion of persons so rejected fell from 9·7 in 1891 to 8·9 in 1892, but even the latter percentage is high. The Protector rightly points out that the position of an emigrant who is rejected after admission into a depôt is one of peculiar hardship. The small sum paid to him on discharge is very inadequate compensation for the breaking up of his home, the trouble he has been put to in coming, and the necessity of making a fresh start in life. Cases of this kind probably do much to deter intending emigrants, and it is to the interest of the Emigration Agents to have a trustworthy medical examination made at as early a stage of the proceedings as possible.

Sanitation and management of the depôts.

6. The Lieutenant-Governor has read with pleasure the favourable report of the Medical Inspector of Emigrants, Surgeon-Captain A. Leahy, on the general arrangements, sanitation and management of the depôts. As compared with the previous year, the percentages of sickness and deaths were 4·44 and 0·37 against 4·67 and 0·66 respectively. The total admissions amounted to 669, and the total mortality to 56, as against 986 and 141 respectively in 1891. The chief causes of sickness were malarial fevers, chest affections, and dysentery. There were 264 cases of malarial fever, 12 of which proved fatal, 85 cases of chest affections with 24 deaths, and 89 cases of dysentery, of which one only ended fatally. The great attention paid by the Emigration Agents to sanitation accounts in great measure for the very marked decrease in the number of cases of measles, of which there were only 64 against 183 in 1891. The hospitals of the Surinam and British Guiana depôts were improved at considerable expense, and further improvements are being undertaken in the latter. At no time during the year was the embarkation or despatch of emigrants delayed by the occurrence or existence of any epidemic disease. The aggregate mortality on the voyages to the colonies amounted to 146 against 398 in 1891, and the percentage of deaths on the number embarked in Calcutta fell from 2·54 to 1·31.

Return emigrants.

7. Five thousand two hundred and twenty-five return emigrants, including 11 from Bourbon, were re-shipped in eight sailing vessels and eight steamers from the various colonies as against 4,201 in the preceding year. Of these 87 or 1·66 per cent. died on the voyage, a percentage which the Lieutenant-Governor agrees with the Protector in considering remarkably low, looking to the fact that a certain proportion of return emigrants are advanced in age and enfeebled in health. It is satisfactory to observe that among the returned emigrants none were lepers. The savings brought back averaged Rs. 156 per man as against Rs. 138 in the preceding year, Jamaica, Trinidad and Natal showing the largest averages, and Mauritius the smallest. The figures of return emigrants who have gone back to the colonies during the year may be quoted as affording some indication of the popularity of the different colonies among the emigrant classes. Out of 551 returned coolies, 333 re-emigrated to Demerara, 110 to Trinidad, 62 to Natal, 27 to Fiji, and 19 to Surinam.

8. This branch of the work of the Protector's office was efficiently conducted during the year. Such delay as occurred in administering appears to have been due to the fact that when heirs have been traced the Emigration Agents in India cannot pay to the Protector the amount standing to the credit of the estate without the sanction of the Colonial authorities. Notwithstanding this cumbrous procedure, it is stated that all colonies except Mauritius make payments within a reasonable time. Of 500 estates, valued at Rs. 70,384, which came under administration, 360, amounting to Rs. 49,772, were finally disposed of, leaving a balance of 140, amounting to Rs. 20,611, still under enquiry, for which British Guiana, Mauritius, and Fiji are mainly responsible.

Administration of estates.

9. Owing to smaller despatches the receipts derived from the consolidated fee of Rs. 3 per head on each coolie embarked fell from Rs. 47,624 to Rs. 35,272-4, while the expenditure rose from Rs. 27,632-15-5 to Rs. 29,616-10-8. This was due to the fact that in the preceding year the amount shown as pay and allowances of Emigration officers was unusually low by reason of acting arrangements. The balance at credit of the Bengal portion of the fund at the close of the year was Rs. 5,655-9 4 against Rs. 29,616 10-8 in 1892.

Financial.

10. From the above summary it will be seen that the year 1892 was on the whole a successful one for Colonial Emigration; and the Lieutenant-Governor desires to express his thanks to Dr. Macleod, Protector of Emigrants, to Surgeon-Captain A. Leahy, Medical Inspector of Emigrants, and to the Emigration Agents to whose care and attention the good results attained were due.

ORDER.—Ordered that a copy of the Report and of this Resolution be submitted to the Government of India, Revenue and Agricultural Department, for information.

Ordered also that a copy be forwarded to the Protector of Emigrants, Calcutta, for information, and to all Commissioners of Divisions for information and circulation to all District Officers subordinate to them.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Secretary to the Govt. of Bengal.

RESOLUTION ON THE ADMINISTRATION REPORTS OF THE ALIPORE AND HAZARIBAGH REFORMATORY SCHOOLS FOR THE YEAR 1892.

No. 1865P.

RESOLUTION.

JAILS.

Dated Calcutta, the 9th June 1893.

READ—

(1) Letter No. 5260, dated the 6th May 1893, from the Inspector-General of Jails, forwarding the Administration Report of the Alipore Reformatory School for the year 1892.

(2) Letter No. 5085, dated the 29th April 1893, from the Inspector-General of Jails, forwarding the Administration Report of the Hazaribagh Reformatory School for the year 1892.

Read also—

The Reports for the year 1891 and the orders of Government recorded thereon.

The Alipore School.—The daily average number of boys confined in the Alipore School rose from 142 in 1891 to 168 in 1892. Sixty-two boys were admitted during the year and 27 were released. There were no serious offences, and discipline is reported to have been well maintained. It is satisfactory to notice that, in spite of the large increase in the number of boys, the average number of punishments to each boy fell from 1·02 in 1890 and 0·66 in 1891 to 0·45 in 1892.

With an increase in the number of boys there has been an increase of Rs. 59-3 in the money rewards earned. The average number of boys entitled to marks rose from 82·16 in 1891 to 113·5 in 1892, and the weekly average earnings from Rs. 3-2-9 per head to Rs. 4-3-3. There were no escapes and no deaths during the year, and the small increase from 2·52 to 2·96 in the number of admissions to hospital is accounted for by an outbreak of chicken-pox among the boys in the early part of the year.

2. No important buildings were undertaken, but it is reported that more workshops are urgently required. The arrangements for the work and recreation of the boys remained practically the same as in former years. At the close of 1891 gymnastic exercises were introduced into the school, and one hour's gymnastic training under a duly qualified teacher formed a part of the daily routine throughout the past year. The boys were allowed to practice as much as they pleased during their leisure hours and on Sundays, and His Honour is glad to hear that they are taking kindly to this form of exercise, which is conducive to their good health and keeps them suitably employed during play hours.

3. Of the 64 boys released from the Reformatory, concerning whom reports were received from Magistrates during the year, 9 were reconvicted and sent to jail, one was reported as bearing a bad character, while the remaining 54, of whom only 2 are following the trade they learned at school, are believed to be leading honest lives. Out of 263 boys released since the opening of the school, 38 have subsequently been sent to jail, 42 have been reported as bearing bad characters, and 183 as bearing good characters. The number following the trade learned in the Reformatory is only 29. The explanation of this very discouraging fact is doubtless to be found in caste prejudices and social customs, which compel boys on their return home to follow the professions of their parents and prevent them from taking up the trades which they have learned at school. Having regard to the great variety of caste occupations in Bengal, and to the impossibility of employing boys in reformatories on more than a few trades, the difficulty indicated by these figures is probably not to be entirely overcome. Still special care should be taken to adjust the trades taught, as far as possible, to the caste requirements of the boys, so that on release they may be able to practise them.

4. The total expenditure for 1892 was Rs. 18,298-1-4 against Rs. 15,776-5-6 in 1891, the increase being mainly due to the large number of boys confined in the school. The cost of maintenance per head fell from Rs. 111-1-6 in 1891 to Rs. 108-14-6 in 1892. The average expenditure per head on diet was Rs. 34-9-2, compared with Rs. 32-10-3 in 1891, the increase being attributed to the higher price of rations. Arrangements have been made for the purchase and storing of supplies of grain at the cheapest seasons of the year for the use of the school, and the sanction of Government has lately been given to the construction of a godown for this purpose. The net profits from the Manufacturing Department amounted to Rs. 12,259-3-4, against Rs. 10,235-12-8 in 1891.

5. A proposal to amalgamate the Alipore and Hazaribagh Schools and to locate them at Hazaribagh was under consideration during the year, but was finally abandoned, the Lieutenant-Governor deciding that it would be inadvisable to make any change in existing arrangements. The Lieutenant-Governor's acknowledgments are due to the Board of Management of the School, and he is glad to notice that Mr. C. J. Courtenay has again discharged his duties as Superintendent to the complete satisfaction of the Board.

6. *The Hazaribagh School*.—The daily average population of the Hazaribagh School was 300·93 against 296·10 in 1891. Sixty-nine boys were admitted into the school, 66 were released, and 3 died. Of the three deaths, one was that of a boy, Babu Lal, who accidentally fell into the well outside the play-ground and was drowned. The head warder, through whose neglect the boy was allowed to leave the play-ground, was fined half a month's pay, and the warder posted on the wall near the well was dismissed. Discipline was well maintained during the year, and the conduct of the boys is reported to have been exceptionally good. There were 266 punishments against 219 in 1891, but these were chiefly for short work, the number of offences under this head having increased from 23 to 158. The educational requirements of the school were well attended to, and there was a satisfactory increase in the number of boys who attended the night school. The daily routine was the same as in former years. A gymnasium was opened during the year, and an instructor on Rs. 10 a month has lately been appointed under the orders of Government. The general health of the boys is reported to have been good. The daily average of sick was 2·89 against 2·54 in 1891.

7. The total expenditure of the school in 1892 was Rs. 77-11-7 per head, against Rs. 83-3-9 in the preceding year. The cost of diet per head rose from Rs. 27-15-9 to Rs. 29-1-9, the increase being due to a rise in the cost of rice, the average price of which was 6 annas 10 pies per maund in excess of that of 1891. In his Resolution on last year's report the Lieutenant-Governor expressed a hope that greater attention would be paid to the judicious storing of food-grains at the proper season, and he is glad to notice that by the purchase of 1,000 maunds of wheat at the time of the harvest, a saving of about 5 annas a maund was effected. A new cook-shed was built during the year, and the new work-shed, which covers an area of 16,000 square feet, and in which all the trades are now carried on, was completed.

8. The net profits on articles manufactured in the school increased from Rs. 2,746-12 in 1890 and Rs. 2,661-12-9 in 1891 to Rs. 3,437-9-8 in 1892. The packing of quinine, which was introduced in September and was carried on for the remainder of the year, is a most suitable form of occupation for young boys and will be further extended. With this exception the employment of the boys remained the same as in former years.

9. Reports regarding 96 boys released from the school were received during the year, and of these four were reconvicted and sent to jail. It is said that 10 of these boys are following the trades learned in the Reformatory, and this is the best record of any year since the opening of the institution in 1882.

10. Sir Charles Elliott visited the Reformatory in November last, and was favourably impressed with the bright and healthy appearance of the boys. The arrangements for work and recreation were satisfactory, and His Honour was glad to see that no serious offences had been committed, and that the number of punishments was small. The management of the school reflects

credit on Mr. Hill, the Deputy Superintendent, who is highly spoken of by the Inspector-General of Jails and by all who have visited the school.

ORDER—Ordered that a copy of this Resolution be forwarded to the President of the Board of Management of the Reformatory School at Alipore for information and communication to the Members of the Board.

Ordered, also, that a copy of the Reports, and a copy of this Resolution, be forwarded to the Inspector-General of Jails for information and communication to the Superintendent of the Hazaribagh Reformatory School.

Ordered, also, that the Resolution be published in the *Calcutta Gazette.*

By order of the Lieutenant-Governor of Bengal,

H. J. S. COTTON,

Chief Secretary to the Govt. of Bengal.

RESOLUTION ON THE REPORT ON THE LEGAL AFFAIRS OF THE GOVERNMENT OF BENGAL FOR THE YEAR 1892-93.

No. 135J.D..

JUDICIAL.

Darjeeling, the 12th June 1893.

READ—

The Report on the Legal Affairs of the Government of Bengal for the year 1892-93.

Read also—

The Reports of the two previous years, and the orders of Government thereon.

THE report was due on 1st May, and was received on 30th May. The Legal Remembrancer remarks that, having regard to the unpunctuality of some districts and the references which are inevitable in the case of others, it is not possible for him to compile the statistics the report contains within 15 days from the date on which the district reports are due in his office. As it is, the figures of Government litigation from Manbhum and Lohardaga and from 15 Courts of Wards' Estates have not yet been received. This question will receive the separate consideration of Government.

2. Of the two appeals to the Privy Council which were pending at the close of last year, the case of Maharani Sarat Sundari Debi *versus* The Secretary of State for India in Council was disposed of by the determination of certain remanded issues by the High Court. The remaining case of Dakhina Mohan Roy Chowdhry *versus* Saroda Mohan Roy Chowdhry and others, minors under the Court of Wards, is still pending, but no appearance will be made for the wards, the amount at stake not justifying the outlay for costs. One fresh appeal on behalf of Government was filed towards the close of the year.

3. The results of Government litigation in the Civil Courts of Bengal during the year under review and the two preceding years are given in the accompanying table:—

	ORIGINAL CASES.			APPEALS— Before lower Courts.			APPEALS— Before High Court.			TOTAL.		
	1890-91.	1891-92.	1892-93.	1890-91.	1891-92.	1892-93.	1890-91.	1891-92.	1892-93.	1890-91.	1891-02.	1892-93.
Decided in favour of Government	243	238	336	45	32	44	23	10	11	311	280	391
Decided against Government	65	76	116	7	7	12	3	18	6	75	96	134
Compromised, remanded, or withdrawn.	57	125	108	1	3	8	1	7	4	59	135	120
Percentage in favour of Government.	78·8	75·7	74·4	86·5	82	78·5	88·4	43·5	64·7	80·5	74·4	74·5

N.B.—The figures of 1892-93 do not include those of the districts of Manbhum and Lohardaga, as the statements from those districts have not been received.

Excluding land acquisition cases the figures are as under—

	Original cases.			Appeals—Before lower Courts.			Appeals—Before High Court.			Total.		
	1890-91.	1891-92.	1892-93.	1890-91.	1891-92.	1892-93.	1890-91.	1891-92.	1892-93.	1890-91.	1891-92.	1892-93.
Decided in favour of Government	110	95	145	45	32	44	22	10	11	177	137	200
Decided against Government	33	37	52	7	7	12	3	10	6	43	54	72
Compromised, &c.	10	11	8	1	3	8	1	6	4	13	20	20
Percentage in favour of Government.	76·8	72	73·6	86·5	82	78·5	88	50	64·7	80·4	71·7	73·5

There is a considerable increase in the number of original cases of which no explanation is given, and it is clear that, except in the case of appeals to the High Court, the Government has been little more successful in its litigation than it was in the preceding year.

4. Of the six cases in which Government was unsuccessful in the High Court, in only one did it appear as appellant; in three of them the result was due to a Full Bench ruling setting aside the previous decision of a Divisional Bench as to the period of limitation in demands for unclaimed sale proceeds. One case related to the terms of settlement on which a resumed taluk in Kutubdia in Chittagong was sold. The facts of this case are summarised with such brevity that the Lieutenant-Governor is in doubt as to their meaning, but it seems that a principle of great importance was laid down with regard to the right of a talukdar to a permanent settlement, and His Honour would be glad to receive a special report in this case through the Board of Revenue with as little delay as possible.

5. By showing as one case analogous cases governed by a single decision and excluding land acquisition cases, the Legal Remembrancer shows that the percentage of Government successes in the Lower Appellate Courts and in Courts of first instance becomes 84·6 and 75·4 respectively. It is presumed that none of the cases in which Government was successful were analogous ones, as otherwise this mode of calculation is not legitimate. Apart from cases against the Railway administrations, the most important suit brought in the Court of first instance relates to a claim brought by a zamindar to receive compensation for the value of land previously occupied by public roads which were included in a large area acquired by Government for public purposes. The claim which was partially admitted by the Subordinate Judge appears, as the Legal Remembrancer observes, to be a novel one in this country, and the Lieutenant-Governor presumes that there must have been exceptional circumstances unexplained in the report which led to such an unusual decree being passed. It is satisfactory to note that in only two original cases did Government appear as an unsuccessful plaintiff.

6. The following figures show the results of Courts of Wards' litigation during the last three years in all courts. The figures are satisfactory in themselves and as comparad with previous years:—

	(1) 1890-91.	(2) 1891-92.	(3) 1892-93.
1. Decided in favour of Court of Wards ...	711	903	654
2. Decided against Court of Wards ...	97	139	73
3. Compromised, remanded, or withdrawn ...	30	76	66
4. Percentage in favour of Court of Wards ...	88	$86\frac{1}{5}$	89 9

7. The extent to which decretal amounts due to Government have been realised is shown by the following figures:—

	(1) 1890-91.	(2) 1891-92.	(3) 1892-93.
	Rs.	Rs.	Rs.
1. Amount under realization ...	61,231	64,248	42,617
2. Amount realized during the year ...	14,790	30,333	12,616
3. Percentage of recovery ...	$24\frac{3}{20}$	$45\frac{1}{4}$	$29\frac{1}{2}$

Of the net balance Rs. 9,288 have been remitted, and further sums are said to be irrecoverable.

8. The amount of wards' decrees recovered is as follows:—

	(1)	(2)	(3)
	1890-91.	1891-92.	1892-93.
	Rs.	Rs.	Rs.
1. Amount under realization ...	11,92,016	10,95,704	9,83,675
2. Recovered during the year ...	1,54,504	2,30,997	1,59,600
3. Percentage of recovery ...	13	$21\frac{1}{13}$	$16\frac{1}{4}$

The outstanding balance still remains excessive, and it would appear that the efforts to realise it are not marked by much success. In the Tikari estate Rs. 1,15,410 are said to be under execution, and yet only Rs. 23,922 were collected during the year, and the proceedings would appear to be hopeless. The balance due to the Burdwan Raj estate has not been materially reduced. The subject of these realisations has year after year formed the subject of unfavourable comment, but there is nothing in Mr. Allen's report which affords any excuse for the bad results or throws light on the difficulties which have been before brought to notice. The Lieutenant-Governor does not know whether commission is now granted to the Nazir or others concerned in realising these outstanding decrees, and commends this question to the consideration of the Board of Revenue.

9. The Lieutenant-Governor is glad to receive the favourable report which is given of the character and qualifications of the Government Pleaders in almost every district of these provinces, and acknowledges the generally satisfactory manner in which Government litigation has been conducted.

ORDER.—Ordered, that a copy of the Resolution be forwarded to the Superintendent and Remembrancer of Legal Affairs and the Solicitor to Government for information.

Ordered also, that a copy of the Resolution be forwarded to the Revenue Department of this Government and to the Board of Revenue for information.

Ordered also, that a copy of the Report and Resolution be submitted to the Government of India in the Home Department for information.

Ordered also, that a copy of the Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

H. J. S. COTTON,

Chief Secretary to the Govt. of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 10th June 1893.

Division	No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.					
Burdwan Divn.	1	Burdwan	June 10, '93	0·27	Weather—hot and cloudy with cool mornings. Agricultural operations busily going on. Fodder and water sufficient. Prices of common rice :— Srs. Burdwan ... ... 10 to 13 per rupee. Kalna ... ... 10 to 13 per rupee. Katwa ... ... 13 per rupee. Raniganj ... ... 13 per rupee.
	2	Bankura	„ 10, '93	0·49	Weather—hot and generally cloudy. Sowing of *nuan* and *baran dhan* is still going on. Fodder and water sufficient. Common rice selling at— Srs. Sadar ... ... 11 per rupee. Vishnupur ... ... 11½ per rupee.
	3	Birbhum	„ 10, '93	0·12	Fine weather prevails. Transplantation of sugarcane finished. Sowing of paddy going on. Fodder and water sufficient. Price of rice stationary at from 12 to 14½ seers per rupee.
	4	Midnapore	„ 10, '93	1·24	Slight rain in every subdivision. Ploughing and sowing checked by the late heavy rain have now been resumed. Prices of common rice :— Srs. Sadar ... ... 11 per rupee. Contai ... ... 13 per rupee. Tamluk ... ... 10 per rupee. Ghatal ... ... 10 to 11 per rupee.
	5	Hooghly	„ 10, '93	0·11	Weather—hot days. Condition of jute, *aus* and sugarcane good. *Rabi* crops were affected to some extent by the late rain in the Serampore subdivision. Price of fodder going high at Jahanabad. Water-supply sufficient except at Pandua. Prices of common rice :— Srs. Sadar ... ... 10 to 11 per rupee. Serampore ... ... 10 to 11½ per rupee. Jahanabad ... ... 10½ to 12½ per rupee.
	6	Howrah	„ 10, '93	Nil	Weather—hot. The late cyclone has done some damage to the jute and early paddy crops. Paddy is being sown for seedlings. Condition of cattle good. Fodder and water for cattle sufficient. Price of rice 10 to 11 seers per rupee.
Presidency Divn.	7	24-Parganas	„ 10, '93	Nil	Weather—seasonable. The lands flooded are now free from water. Sowing of *aus*, *aman* and jute proceeding. No cattle-disease reported. No want of fodder and water.
	8	Nadia	„ 10, '93	1·37	Weather—hot. Prospects of crops good. Weeding of rice going on. *Aman* rice being sown. Rain has done good on the whole, though some rice on low lands has been flooded. Fodder and water for cattle sufficient. Prices stationary.
	9	Khulna	„ 10, '93	0·80	Weather—hot with a few light showers. *Boro* harvest nearly completed in Bagerhat. *Til* doing well. Sowing of *aus* and *aman* going on. Common rice selling at from 10½ to 13 seers per rupee. Fodder and water for cattle sufficient. Cattle-disease in a few villages in Magura thana.
	10	Jessore	„ 10, '93	1·05	Weather—seasonable. Sowing of *aus* and *aman* in progress. Prospects improved a little by the sunshine. Harvesting of *til* going on. Fodder sufficient. Water wanted in places in the Bangaon subdivision. Price of rice has slightly risen.
	11	Murshidabad	„ 10, '93	0·16	Weather—seasonable. Sowing of jute and *aman* continues. *Til* and *boro* paddy are being harvested. Indigo, mulberry and sugarcane doing well. Common rice sells at 11½ seers per rupee. Fodder available for cattle.

	No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concld.*					
CHITTAGONG DIVN.	12	Chittagong.	June 10, '93	1·31	Weather—seasonable. Prospects of crops good. Prices stationary. Condition of cattle generally good. Supply of fodder sufficient.
	13	Noakhali	„ 10, '93	2·40	Weather—warm and sultry with occasional rain. *Aus* and *aman* paddy being sown. Condition of paddy plants in low lands not good owing to accumulation of water in the fields. No cattle-disease. Fodder and water sufficient. Price of common rice ranges between 10½ to 11½ seers per rupee.
	14	Tippera	„ 10, '93	0·69	Weather—seasonable. Jute and rice flourishing. Prospects excellent. Ploughing in hand. Transplanting of *dhan* proceeding.
	15	Chittagong Hill Tracts.	„ 8, '23	1·75	Weather—hot and cloudy with occasional showers of rain throughout the week. Sowing in *jums* still continues. Ploughing in low lands for winter rice continues. No cattle-disease reported. Common rice being sold at 8 seers per rupee.
DACCA DIVN.	16	Dacca	„ 10, '93	0·24	Weather—hot. Prospects of standing crops good. Fodder available. No cattle-disease. Common rice selling at from 10 to 12 seers per rupee.
	17	Faridpur	„ 10, '93	0·95	Weather—hot. Standing crops doing well, and sowing still continues in places. Common rice sells at 11 seers per rupee. Cattle get fodder, but disease still continues in three thanas.
	18	Backergunge	„ 10, '93	1·32	Weather—seasonable. Prospects of crops fair. Some damage has been caused by the late high tides. Common rice selling at from 9 to 12 seers per rupee. Fodder and water sufficient.
	19	Mymensingh	„ 10, '93	2·01	Weather—sultry and moderately hot. Prospects of standing *aus* paddy and jute good; average outturn expected. Prices of common rice from 11 to 13 seers per rupee. Condition of cattle good. Supply of fodder and water sufficient.
RAJSHAHI DIVN.	20	Dinajpur	„ 10, '93	0·61	Weather—hot, cloudy and rainy. Rain more or less almost daily. *Bhadoi*, jute and sugarcane prospering well. Ploughing for *haimanti* commenced. Prices of rice unchanged. Cattle in good condition. Fodder and drinking water continue sufficient.
	21	Rajshahi	„ 10, '93	0·18	Weather—very hot and cloudy. The rains having ceased to fall for some days, agricultural prospects have much improved. Crops are coming on nicely. Condition of cattle good. Fodder and water-supply ample. Price of rice varies from 11 to 14 seers per rupee.
	22	Rangpur	„ 10, '93	3·60	Weather—seasonable. *Aus* and jute are both doing well. Price of common rice stationary.
	23	Bogra	„ 10, '93	1·45	Weather—unsettled. Lands are being cultivated for *aman*. *Aus* paddy and jute are progressing fairly. Common rice sells at 12 seers per rupee. Fodder and water sufficient.
	24	Pabna	„ 10, '93	1·71	Weather—showery and cloudy. Prospects of crops on high lands continue good. Weeding being retarded owing to incessant rain. Price of common rice at Pabna 11½ seers per rupee and at Sirajganj from Rs. 4-12 to Rs. 5-4 per maund. Fodder and water-supply sufficient.
	25	Darjeeling	„ 10, '93	1·44	Weather—unseasonably misty and rainy. *In the hills:—Bhutta, bhadoi dhan, marua* progressing favourably; *shama, kangni, phaphur* and potatoes flowering. *In the terai:—Bhadoi* sowings finished; prospects of standing crops good. Prices of coarse rice:— Srs. Hills ... ... 10 } per rupee. Terai ... ... 11 }
	26	Jalpaiguri	„ 10, '93	1·27	Weather—cool and pleasant. Prospects of *bhadoi* and jute favourable. The rain has done good to these crops. Common rice sells at 11½ seers per rupee. Fodder and water sufficient.

No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR.				
BHAGALPUR DIVN.				
27	Monghyr	June 10, '93	0·38	Weath er—hot and, occasionally cloudy. Ploughing and sowing of paddy and *bhadoi* crops in progress. *Makai* has germinated well, but more rain is necessary for its growth. Small-pox among cattle in Nawadih and Kharakpur. Fodder and water-supply sufficient. Prices of common rice:— Srs. Sadar ... ... 13 to 14 } per rupee. Begusarai ... ... 14 } Jamui ... ... 13 }
28	Bhagalpur	„ 10, '93	0·27	Weather—hot and close. Sowings still in progress and prospects favourable, but more rain is wanted for the indigo. Price of common rice 13 seers 14 chitaks per rupee.
29	Purnea	„ 10, '93	0·09	Weather—cloudy and sultry. Very timely rain has fallen in the northern subdivisions and in several thanas of the Sadar subdivision, and is now falling at Purnea. It has fallen in time for the crops which were beginning to want it, but which will now do very well if it continues. Fodder and water plentiful. Price of rice stationary at 12 seers per rupee at Purnea and falling from 11 to 12 seers per rupee at Kishanganj.
30	Malda	„ 10, '93		Weather—hot and occasionally cloudy. Harvesting of *boro* rice nearly over; estimated outturn 14 annas. *Bhadoi* crops now being weeded everywhere. Prices of coarse rice 11 to 15 seers per rupee. Condition of cattle good.
31	Sonthal Parganas	„ 10, 93	0·49	Weather—cloudy and warm with occasional showers. *Boro dhan* harvest almost completed. Ploughing and sowing going on actively, and seedlings beginning to spring. Sugarcane doing well. Prices of rice from 11 to 13½ seers per rupee. Fodder and water abundant.
PATNA DIVISION.				
32	Patna	„ 10, '93	0·14	Weather—hot. Harvesting of *cheena* going on. Sugarcane looks well. Field being prepared for *bhadoi* and paddy crops. *Makai* sown in some places. Prices of common rice:— Srs. Patna ... ... 15 } per rupee. Barh ... ... 13½ } Bihar ... ... 16½ } Dinapore ... ... 12 to 13 }
33	Gaya	„ 10, '93	Nil	No rain during the week. Generally the days have been hot. *Cheena* harvesting completed. Sugarcane doing well. Ploughing and sowing of *marua* and paddy in progress. In some places transplantation of *marua* begun. Prices stationary. Fodder and water sufficient.
34	Shahabad	„ 10, '93	Nil	Weather—hot with easterly winds. Lands being ploughed for *bhadoi*. Sugarcane doing well. Fodder and water sufficient. Prices stationary.
35	Darbhanga	„ 10, '93	Nil	Weather—hot and occasionally cloudy with high west wind. *Bhadoi* sowings in progress. *Mung* is being collected. Rain is now much wanted for all agricultural purposes. Prices remain stationary. Fodder for cattle sufficient.
36	Muzaffarpur	„ 10, '93	Nil	Weather—hot and occasionally cloudy with east winds. *Mung* and *cheena* being harvested. Standing crops doing well. Rain wanted for agricultural operations on high lands. No disease among cattle. Fodder and water sufficient.

	No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR—*concld.*					
PATNA DIVISION—*concld.*	37	Saran	June 10, '93	Nil	Weather—days hot and muggy with coolish breeze at night. Storms threaten almost daily. Standing crops doing well. Maize being sown. Water and fodder ample. Prices of common rice:— Chapra ... ... Srs. 13 c. 0 per rupee. Siwan ... . 12 0 per rupee. Gopalganj ... ... 13 5 per rupee.
	38	Champaran	" 10, '93	0·63	Weather—warm. *Dhan* still being sown. *Cheena* in good condition Prices stationary. Fodder and water sufficient.
ORISSA.					
ORISSA DIVN.	39	Cuttack	" 10, '93	0·36	Weather—hot. *Beali* and *sarad* being sown. Supply of fodder and water sufficient. Price of rice stationary.
	40	Puri	" 8, '93	Nil	Weather—hot. Cultivation and sowing of paddy stopped at present in some places on account of collection of rain water in the fields. Miscellaneous crops thriving well. Rice sells at from 14 seers 7 chitaks to 17 seers 1 chitak per rupee.
	41	Balasore	" 10, '93	0·59	Weather—still abnormally cool. Ploughing continues. Prices stationary. Water and fodder sufficient.
CHOTA NAGPUR.					
South-West Frontier Agency.					
CHOTA NAGPUR DIVN.	42	Hazaribagh	June, 10, '93	1·2	Weather—unsettled. Sugarcane doing well. Mango poor. *Bhadoi* crops and rice being sown. Fodder and water sufficient. Prices of common rice.— Hazaribagh ... . Srs. 9 to 14 per rupee. Giridi ... ... 9 to 13 per rupee.
	43	Lohardaga	" 10, '93	2·10	Weather—cloudy. Ploughing and sowing of winter rice in full progress. Common rice selling at 13 seers per rupee. Fodder and water sufficient.
	44	Palamau	" 9, '93	...	Weather—close and cloudy. Rain reported from almost all parts. Ploughing for *bhadoi* going on. Cattle-disease reported from some thanas. Prices stationary. Fodder and water sufficient.
	45	Singhbhum	" 10, '93	0·25	Weather—both sunny and cloudy with light rain occasionally. Crops doing well and sowing going on. Price of rice 10 to 12 seers per rupee. Cattle-disease in a few villages in the Kolhan.
	46	Manbhum	" 10, '93	0·58	Weather—stormy and cool. Bright warm weather is required for a few days for the sowings. Prices stationary. Water and fodder sufficient.

Published for general information.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF MAY 1893.

THE discussion of the weather experienced in Bengal during the past month is readily separated into three parts, because of the decided character of the conditions which prevailed at different times. During the first period, which was comparatively short, lasting only till the 8th, a disturbance, which originated to the west of the province, caused showery weather in all districts, and as the accompanying depression filled up rapidly, the pressure arrangement not only in Bengal, but also over the Bay, became very uniform and initiated what may be considered as the second period. This interval, which continued till the 17th, was characterised by very uniform pressure throughout, and consequently fine calm cloudless weather. The third period, from the 17th till the end of the month, is notable because of the cyclone, which, forming in the south of the Bay, advanced northwards into the north-west angle, and there developed into one of the most severe experienced at the head of the Bay during the past quarter of a century. There is a very intimate connection between the conditions during the second interval and the stormy weather which followed, but they are here separated for convenience of discussion. The effect of the calm weather which always precedes a disturbance in the Bay has been frequently discussed in meteorological publications, and though allowing that the history of the cyclone should be taken up from the 8th rather than from the 17th, the present method is taken for the sake of brevity.

During the first eight days the effects of two slight disturbances were felt in Bengal. Both came from the west, and were due to depressions of considerable depth, the first of which was filling up as the month began. With an interval of two or three days only the second came, and caused a rapid fall of pressure on the 7th in the western districts, especially in Chota Nagpur. It practically disappeared on the following day, as there was a rise equally rapid in the same districts. Easterly winds with cloudy skies and numerous local storms prevailed during these early days of May, but rainfall was more general on the 2nd and again on the 7th and 8th than on the other days. Though unusually late in the season, hail showers were reported from many places on the 7th, but this late occurrence of hail may possibly be accounted for during the present year by the very low temperature which has prevailed, and which was a very noticeable feature of the weather on the 7th in the western districts.

A noteworthy feature of the recovery of pressure in connection with both these depressions was its commencing in the north-east of the province, and from there spreading to the south-west, in consequence of which the area of low pressure was driven southwards, and the easterly circulation, instead of changing, as it would have done if the depressions had passed eastwards, became even more prominent.

After the 8th pressure became very uniform, and though showers continued to fall and temperature was very low for some time, weather steadily improved. By the middle of the month, fine cloudless weather prevailed, and almost for the first time during the present year heat was greater than the average for the season of the year. Over Bengal and the north of the Bay this fine weather continued till the 21st, but in the south of the Bay as well as at the Burmah stations unsettled conditions began to appear about the 17th.

Cyclonic storm from the 17th to the 29th.—From the 17th signs of unsettled weather appeared in the stronger winds at the Ceylon stations, and in the easterly directions in Burmah, but the disturbance had at that time probably not concentrated into a well-defined storm, as vessels proceeding up the Bay experienced strong winds but variable pressure. Gradients gradually became steeper in the south of the Bay as the area of stormy weather extended northwards, and as pressure fell briskly for several days at all the coast stations, the depression steadily widened and deepened till the 21st, when its influence at the Burmah and Orissa stations became more marked. The area of low pressure within which defect was more than ·15 inch then covered the whole of the north of the Bay. The sea was very rough at Diamond Island, and a fairly strong wind was blowing, but after a day or two both wind and sea began to moderate. This improvement in the east of the Bay was only temporary, as after the storm attained to great intensity in the north-west angle, the wind again strengthened at Diamond Island. While this improvement was going on the Burmah coast, the depression had become better defined in the north-west of the Bay, and it then appeared as if the disturbance was similar in character to the ordinary small storms which occur frequently in the rainy season.

On Monday, the 22nd, pressure was rising briskly in the south-east of the Bay and changes were small elsewhere, while wind velocity was low except at Diamond Island and in Ceylon. After this the motion of the depression was slow towards the north, the centre probably passing at no great distance from the North Orissa coast. On the 23rd pressure fell rapidly at False Point, and the wind blew from the north-east with steadily increasing velocity. By the evening of this day pressure had fallen to 29 inches, the velocity of the wind rose to 40 miles an hour, and incessant heavy rain fell. At 8 A.M. on the morning of the 24th, the centre was almost east of False Point, and wind velocity was increasing at all the stations on the north-west coast as well as over Lower Bengal, but rainfall, though very heavy in Orissa and gradually extending to South-West Bengal, was very partial at stations further inland, or entirely absent. During Wednesday and Thursday the motion of the depression was very slow, and at times it appeared to be almost stationary, but it was steadily developing. On the afternoon of Thursday it seemed to be moving in a more westerly

direction so as to pass well to the west of Balasore. The wind directions at Saugor Island, Calcutta and Balasore began to change to south through east, and the strength of the wind moderated at the first two. During the evening of Thursday, however, the winds returned to their previous north-easterly direction and began to increase rapidly in velocity. On the near approach of the centre to the north coast of the Bay, pressure fell with great rapidity at Saugor Island, and reached its lowest point about 5 o'clock on Friday morning, when it was 28·423 inches. The centre must have been then a short distance to the west of Saugor Island. A hurricane began at about 4 A.M., and continued for several hours. At 5 A.M. the velocity was reported to be not less than 90 miles an hour, and the continuance of these high winds is shown by the average velocity from 8 A.M. on Friday to 8 A.M. on Saturday, being 50 miles an hour. After passing Saugor Island the centre moved more to the west, passing half-way between Calcutta and Midnapore in the early part of the afternoon. It then turned to the east and passed slowly across the central and eastern districts of Bengal, but with steadily diminishing intensity. At 8 A.M. on the 28th the centre of the disturbance was between Dacca and Sirajganj, and at that time its influence did not extend to Bihar, where pressure was falling slightly and winds were becoming easterly. On the 29th a very shallow depression remained, extending over the eastern districts of Bengal and the greater part of Assam with lowest pressure between Mymensingh and Silchar. General rain was falling on the parts affected by the depression, though not very heavily, as the largest fall that was reported was under 3 inches, but with its final disappearance on the following day very heavy rain fell at Cachar, and cloudly showery weather became general over the northern districts of Bengal and in Bihar.

The north-easterly motion of the depression had an important influence on the quantity of rain and its distribution over the northern districts. As the cyclonic circulation which prevailed over a wide area meant westerly and north-westerly directions and comparative absence of moisture even when the centre was still at a short distance from the coast. It was only after the depression filled up in Assam that rainfall became general in North Bengal and Bihar.

Pressure.—At the beginning of the month there was defect everywhere, varying from ·1 inch in the eastern districts to ·17 inch in the west of Bihar. The rise that commenced on the 1st in North Bengal and spread southwards and westwards continued till the 4th, when the distribution was above the normal by ·05 inch. It again began to fall slowly on the 5th and 6th, but very rapidly on the 7th, after which, as in the previous case, a rapid rise commenced in the north and spread southwards. Excess was then as much as ·2 inch. From the 8th till the approach of the deep depression from the Bay small changes prevailed, mean pressure remaining considerably above the normal. From the 13th to the 21st there was a steady moderate fall; on the 22nd a slow rise prevailed even in Orissa, but on the 23rd, though pressure was still rising over nearly the whole of Bengal and the Bay, there was a rapid fall at False Point and a brisk fall at the other Orissa stations. From this date till the 29th very large changes occurred at stations near which the centre passsed. Readings at Calcutta, Midnapore, Balasore and False Point fell to 29 inches and at Saugor Island on the morning of the 26th the lowest reading observed was 28·423 inches. Owing to the slow motion of the depression changes during the 26th were very small except at Saugor Island, Balasore, Midnapore: and at Sirajganj and Faridpur, where there was a rapid fall. The recovery in South-West Bengal began about 24 hours after the centre passed, but as the disturbance was rapidly moderating, the changes in the central districts were not so delayed. The rise that followed continued till there was a considerable excess at the end of the month.

Temperature.—Two periods of unusually cool weather occurred during May—the one between the 4th and the 8th, and the other from the 24th to the 29th. At other times readings were more frequently below than above the normal, but from about the middle of the month till the 22nd there was excessive temperature over the greater part of the province, especially in the northern districts. While mean temperatures were below the normal, the greater part of the defect was due, not so much to the air being cool, but to the sun being obscured by clouds. This is shown in the night temperatures being only slightly below the normal, while in maximum temperature there was a very large defect. From the 4th to the 9th means were frequently between 15° and 20° below the normal in the western districts, but in the eastern half of the province defect was generally below 5°. Between the 24th and the 29th, while the cyclonic storm was passing across the province, there was again a large defect, chiefly in Orissa, South-West Bengal, and part of the central and eastern districts. In Bihar and North Bengal readings during these days never differed much from the normal. The result of these very low readings in the western districts at the beginning and end of the month is very obvious in the means for the month. The monthly mean defect for Chota Nagpur is 4·9°, in South-West Bengal 3·7°, in Orissa 2·7°, and in South Bihar 2·3° below the normal. In East Bengal and North Bihar defect is 1°, in North Bengal less than half a degree, while in Assam there is excess of 1·4°.

Rainfall.—During the disturbed weather, which continued for some days at the beginning of the month, fairly general rain fell at times, and the average fall was considerably above the normal for those days. An interval of dry weather then commenced and continued except in part of East and North Bengal till the 22nd, when the disturbance in the Bay began to cause general rain in Orissa. From the 23rd to the 25th excessive rain fell over the whole of Orissa, but especially near the coast, and the falls continued on the 26th, but were not so heavy. As the depression advanced northwards, the heavy rainfall spread gradually over South-West Bengal. In the southern half it was general and heavy from the 25th to the

27th, and in the northern half, as in all the central and eastern districts, on the 26th to 28th or 29th. In North Bengal and Bihar scattered showers fell up to the 29th, when fairly general rain was received, but in both these districts the average fall was below the normal. The average falls for the larger divisions are below the normal by less than half an inch in North Bengal and North Bihar, and above elsewhere by 1·67 in South Bihar, 3·07 in Chota Nagpur, 9·13 in East Bengal, 6·75 in South-West Bengal, and 19·65 inches in Orissa. The fall in Orissa is more than six times the normal and in South-West Bengal, East Bengal, and Chota Nagpur more than twice the normal.

The actual falls in Orissa vary from 10 to 44 inches; in South-West Bengal from 10 to 20 inches; in East Bengal from 10 to 35 inches. In North Bengal they are generally between 5 and 10 inches, and in Bihar and Chota Nagpur under 5 inches. The excessive character of the rainfall accompanying the cyclonic storm may be shown by quoting some of the falls in Orissa and South-West Bengal for a period of not more than 24 hours: Kendrapara and Jajpur 11 inches on the 24th; Soro 8·6 inches, and several other places more than 6 inches on the same day; Kendrapara 9·3 inches on the 25th; and Jajpur, Salipur and Chandbali 6 inches or more. In South-West Bengal the heaviest falls were on the 26th or 27th, when the following places reported a fall for one day of more than 7 inches:—Bagerhat, Jahanabad, Burdwan, Indas and Sonamukhi in the Bankura district. In East Bengal on the same days similar amounts of more than 7 inches fell in the Backergunge and Noakhali districts.

The following table gives full data for comparison of the actual and normal rainfall of the month of May for all districts of the province. The figures are derived from the average and actual rainfall of the rain-reporting stations in each district, due allowance being made for the area which each station represents. This gives a more accurate average than the arithmetical means given in the weekly and monthly tables. The first column gives the normal or average district rainfall as determined from the observations of the past 15 years. The second column gives the actual district rainfall as determined from the weighted actual rainfall of the month at the reporting stations in each district. The third column expresses the ratio of the actual district rainfall of the past month to the normal rainfall as a percentage. The fourth column gives the same information as the third in a slightly different form, stating as a percentage how much the district rainfall of the month varied in excess or defect from the normal:—

Percentage Table for May 1893.

Division.	District.	Normal district rainfall for May.	Actual district rainfall for May 1893.	Percentage of actual to normal rainfall.	Percentage excess (+), defect (−).

* Means of 5 days. | † Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period
The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 01
rainfall the normal mean are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station
district, *i.e.*, from total rainfall at the subdivisional stations in the district sending in returns divided by the number of stations. A rainy day is one on

for the week ending Saturday, the 10th of June 1893.

Variation from normal mean.	Mean 8 A.M. temperature.	Average humidity at 8 A.M.	Average cloud amount at 8 A.M.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. Rainfall. Of week. Mean for district.	Of week. Normal mean.	Of week. Average number of rainy days.	Of week. Normal number of rainy days.	Since 1st of month. Mean for district.	Since 1st of month. Normal mean.	Since 1st of month. Variation.	Since 16th May 1893. Mean for district.	Since 16th May 1893. Normal mean.	Since 16th May 1893. Variation.	District.

for the last ten years. The variations are *negative* when the mean for the week is less than the corresponding normal mean, and *positive* when greater. The numbers denoting cloud amount represents the part of the sky covered the whole sky being denoted by 10. Under the head District observations of for the period in question during the past ten years. The means of the district are the numerical average of the rainfall returned received in the which at least a tenth of an inch fell.

Statement of Rainfall in Bengal for the week ending Saturday (8 a.m.), the 10th of June 1893.

Meteorological Division.	District.	Station.	Rainfall. Sunday, 4th.	Monday, 5th.	Tuesday, 6th.	Wednesday, 7th.	Thursday, 8th.	Friday, 9th.	Saturday, 10th.	Total number of rainy days.	Rainfall of week.	Average rainfall of week.	Total rainfall since 1st of month.	Average total rainfall from 1st of month.	Total rainfall since 16th May 1893.	Average rainfall from 16th May to date.

Explanation.—... indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall column are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the* 13*th June* 1893.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 10TH JUNE 1893.

SETTLED weather has prevailed over the whole province throughout the week, if the occasional occurrence of local storms with rain be overlooked. These were fairly numerous in Lower Bengal in the early part of the week, and later in the northern districts.

On the first day, Sunday, the fourth, the area of lowest pressure lay along the foot of the hills, and isobars ran almost due east and west. Gradients were steeper than usual because of an excess of nearly a tenth of an inch in Orissa and the adjacent parts of South-West Bengal and Chota Nagpur, and a similar defect in North Bengal and North Bihar. A brisk rise commenced on the 5th in North Bengal and the defect there soon disappeared, after which a steady slow rise up to the last day of the week caused an excess of from ·1 inch to ·2 inch in the northern districts. In consequence of these changes the area of lowest pressure was forced to the west, and winds from being south-westerly at all stations, changed to south or south-east in Lower Bengal and east in North Bengal and Bihar. These directions are fairly normal for the season, and continued unchanged till the end of the week. With the commencement of easterly winds local storms became more general in East and North Bengal, and probably owing to the scattered rainfall brought by them temperature gradually fell. In the beginning of the week temperature was below the normal only in Orissa and Chota Nagpur, but the area of relatively low readings gradually extended, and by the end of the week included all districts.

Pressure.—After the steady rise of pressure in the northern districts the distribution became much more uniform over Bengal and the Bay than is usual in the early part of June. In the extreme south of the Bay pressure was very nearly normal, but excess gradually increased towards the north, where it was in places more than ·15 inch. The means for the week at the Bengal stations are all above the normal by amounts varying from ·05 inch to ·12 inch.

Temperature.—As stated above, temperature was generally above the normal at the beginning of the week, but owing to local storms readings fell below the normal except at a few stations in East Bengal and the west of Bihar. Coolest weather was in the south-western districts, and especially in Chota Nagpur. This is shown by the means for the large divisions. In Chota Nagpur mean defect is 3·8°, and in Orissa and South-West Bengal about 1°. In all the other districts except Assam there is excess; in South Bihar and North Bengal of about half a degree, and East Bengal and North Bihar of 1·7°.

Rainfall.—Showers fell occasionally in all districts, but the total falls for the week are below the normal in all districts. The showers occurred in the southern districts chiefly on the 4th and 5th or the first two days of the week, and in the north from the 6th to the 10th. The largest mean fall is 2·04 inches in North Bengal, and the only other over 1 inch is 1·12 inches in East Bengal. Chota Nagpur received on an average ·83 inch, North Bihar ·61 inch, South-West Bengal ·52 inch, Orissa ·25 inch and South Bihar ·16 inch.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 10th of June 1893:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.						RAINFALL.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1893.

C. LITTLE,
Offg. Meteorological Reporter to the Govt. of Bengal.

Abstract of the results of Meteorological Observations taken at the Alipore Observatory in the month of May 1893.

	Inches.	Date.	Hour.
The mean pressure of the month	29 628		
The average pressure of May from 24 years' registers ...	29 656		
The highest pressure in the month	29·886	9th	10
The lowest pressure in the month	28 979	26th	10
The range of pressure	0·907		
	Hours.		
The total number of hours of bright sunshine during the month	212·3		
The maximum possible number of hours of sunshine ...	408·3		
	⊖		
The mean temperature of the month	82·6		
The average temperature of May from 24 years' registers ...	86·1		
The highest temperature in the month	96·9	20th.	
The lowest temperature in the month	66·4	7th.	
The range of temperature during the month	30·5		
The mean daily range of temperature	13·9		
The greatest range of temperature in one day	20·1	1st.	
	Per cent.		
The mean humidity of the month	80		
The average humidity of May from 24 years' registers ...	73		
	Inches.		
The mean vapour tension of the month	0·885		
The average vapour tension of May from 9 years' registers ...	0·933		
The mean cloud proportion of the month	5·73		
The average cloud proportion of May from 16 years' registers ...	4·60		
The total rainfall of the month	17·11		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	16·34		
The average fall of May from 48 years' registers ...	5·40		
The greatest fall in 24 hours	6·15	26th.	
	Days.		
The number of rainy days in the month	14		
The average number of rainy days in May from 24 years' registers	13		
	⊖		
The mean maximum equilibrium temperature of solar radiation during the month	139·6		
The mean difference of sun and air temperatures	50·4		
The greatest sun temperature	159·0	21st.	
The greatest excess of sun over air temperature	63·3	14th.	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	73·0		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	2 9		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	5·0	15th.	
	Miles.		
The mean movement of the wind per day	137·6		
The greatest movement of the wind in one day	532·0	26th.	
The greatest movement of the wind in one hour	36·0	26th, 9 to 10 A.M.	

The number of hours with winds from each of the 8 points—

N. 9, N.E. 39, E. 121, S.E. 85, S. 161, S.W. 150, W. 52, N.W. 28, Calm 99.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park Street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore ·003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 0·5 higher; and, finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0·6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

J. H. GILLILAND,
For Meteorological Reporter to the Govt. of India.

The average fall of the corresponding period for 24 years, Surveyor-General's Office	2·39
The total fall from 1st January to 10th June 1893	24·37
The average fall of the corresponding period for 24 years, Surveyor-General's Office	12·67

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast.

RESOLUTION ON THE ANNUAL REPORT OF THE ROYAL BOTANIC GARDEN, CALCUTTA, FOR THE YEAR 1892-93.

FINANCIAL DEPARTMENT—MISCELLANEOUS.

Darjeeling, the 13th June 1893.

RESOLUTION No. 2875Mis.

READ—

The Annual Report of the Royal Botanic Garden, Calcutta, for the year 1892-93.

The Report for the year 1891-92, and the Government Resolution thereon.

THE report, which is one of considerable interest, shows that a steady advance was made during the year in improving the garden both as a scientific centre and as a pleasant resort for the public. At the commencement of the year the season was abnormally dry, and although this had the effect of destroying a number of palms and other out-door plants, these losses were repaired to a great extent before the cold season began. The herbarium continues to receive special attention; more than 15,000 specimens were added to it during the year, among which may be mentioned a large collection of plants from the Royal Herbarium at Kew and the several herbaria in Europe, as well as from Melbourne, Poona, Singapore, Pahang and other States in the Straits Settlements, North Borneo, Penang, Perak, Dehra Dun, Peshawur, Manipur, Assam,

and Egypt. To the contributors of these specimens, including Dr. Cooke, Messrs. Ridley, Haviland, Curtis, Wray, Gamble, Clarke, Sconce-Elliott, and Sir Henry Collett, the thanks of Government are due. Arrangements were also made through the direct agency of the garden officials for continuing the work of collection in Assam, Burma, and the Andaman Islands. Furthermore, Mr. Gammie (Junior), of the Government Cinchona Plantation, was specially deputed under the orders of Government to make a botanical exploration of the less known parts of Sikkim and the Tibetan frontier: the results of his exploration will be embodied in a special report which is in course of preparation. The fourth volume of the Garden Annals was in preparation, and will be published in the current year. The preparation of the fifth volume is also in progress. Both Dr. King and Dr. Prain contributed valuable papers on botanical subjects to Scientific Societies in Bengal and Bombay.

2. The Lloyd Botanic Garden in Darjeeling suffered slightly from hail.

3. The Lieutenant-Governor's thanks are again due to Dr. King for his efficient management of the garden, and to Dr. Prain, the Curator of the Herbarium, who officiated for him during his absence on furlough for seven months.

ORDER.—Ordered that a copy of this Resolution and of the Report be submitted to the Government India, in the Revenue and Agricultural Department, for information.

Ordered also that a copy of this Resolution be forwarded to the Superintendent, Royal Botanic Garden, for information.

By order of the Lieutenant-Governor of Bengal,

J. A. BOURDILLON,

Offg. Secretary to the Government of Bengal.

No. 16G., dated Sibpur, near Calcutta, the 11th May 1893.

From—BRIGADE-SURGEON LIEUTENANT-COLONEL G. KING, M.B., F.R.S., C.I.E., Superintendent, Royal Botanic Garden, Calcutta,

To—The Secretary to the Government of Bengal, Financial Department.

I HAVE the honour to submit herewith the one hundred and sixth Annual Report of the Royal Botanic Garden.

ANNUAL REPORT OF THE ROYAL BOTANIC GARDEN, CALCUTTA, FOR THE YEAR 1892-93.

WHEN the year opened, the garden was suffering from one of the severest droughts which has been experienced for many years. This drought had caused the death of a number of outdoor plants, and especially of palms, and had affected the orchids so that the show of bloom (in spite of the increased number of plants) was the poorest known for years. The drought continued during the months of April and May; and until the monsoon broke it was necessary to employ a very large proportion of the staff of coolies in carrying water. Although dry, the latter part of the hot season had, however, rather a moderate temperature, and the rainy season was favourable; so that the effects of the six months of extreme dryness had been to a great extent recovered from before the cold season began. The latter was the pleasantest which has been experienced in Calcutta within the memory of the oldest inhabitant, and it was in consequence a particularly favourable one for the annuals which form so attractive a feature in the garden during February and March. The expenditure of labour in watering during April, May and June interfered a good deal with the completion of the programme for road-making which had been laid out for the year. A great deal, however, was accomplished in the improvement and remetalling of the avenues in the Palmetum. The roads are no doubt the weak feature in the garden at present, and much remains to be done to bring those

in the central part of it into really good condition. Were mere remetalling all that had to be done, the task would be a simple one; but, owing to the changes of level which were caused by throwing the garden into undulations while it was in process of being laid out afresh some years ago, the levels of many of the older roads must now be altered, and the earthwork which has thus in most cases to precede remetalling adds greatly to the cost of, and lengthens the time taken to effect, the improvements. Towards the end of the year an additional grant of Rs. 5,000 was made for garden improvements, and this was spent chiefly in burning jhamma for road metal to be used during the current year, and in providing bricks for building huts for the garden coolies who have for years past been very badly housed. Although the river did but little visible injury to the bank during the year, it was discovered, when the rainy season had ended, that at one point considerable erosion has occurred, and that the previously sloping bank near the pumping station has been scooped out into a deep hole. I fear there may be serious mischief at this point before long. The conservatories continue to be in a satisfactory condition, the plants in them having suffered comparatively little from the drought of the early part of the year. During the year the collection of aquatic birds on the lake near the orchid house was increased by a gift of water-fowl from Mr. Thiselton Dyer, C.M.G., F.R.S., Director of the Royal Garden, Kew.

2. *Economic plants.*—The usual amount of attention was given to the cultivation and distribution of plants of economic interest. As many as possible of the plant producing sisal hemp (*Agave rigida*, var, *sisalana*) were distributed during the year. The plants thus distributed were obtained from America through the good offices of the Director of Kew. Large numbers of the large-leaved mahogany were issued for planting in avenues in cantonments and civil stations. Rheea plants were also issued as asked for. The interest in rheea cultivation is of a very flickering sort, and at present it has almost died out in the neighbourhood of Calcutta. Plants of the cola-nut tree (*Cola acuminata*) were given out as far as the limited stock permitted. I regret to say that all my efforts to introduce the cultivation of the Japanese paper mulberry have failed. A small plantation is, however, kept up to meet any future demand. As the Japanese mulberry yields a most beautiful fibre, which is naturally so white that it requires very little beaching, it seems a pity that no wealthy landowner has taken up its cultivation on a large scale.

3. *Herbarium.*—Work in the Herbarium went on as usual during the year, botanical references having been answered and plants named for correspondents in increased numbers. Specimens to the number of 15,750 were received from various sources, while 8,787 specimens (all carefully named) were issued to various botanical institutions throughout the world. The plants thus issued belonged largely to families of which either Dr. Prain or myself have recently made particular studies. Foremost amongst the institutions to whom this Herbarium is indebted for contributions during the year is the Royal Herbarium at Kew, the Director of which contributed 2,200 specimens. Next in numbers is the collection of Western Indian species received from Dr. T. Cooke, C.I.E., Principal of the College of Science, Poona. Dr. Cooke's contribution (which contained 1,559 specimens) is a peculiarly acceptable one, as heretofore the flora of Western India had been but poorly represented here. To Mr. H. N. Ridley, Director of the Botanic Garden, Singapore, we are indebted for interesting collections (numbering 1,424 specimens) from Pahang and other States under the protection of the Government of the Straits Settlements. Mr. G. D. Haviland sent no less than 1,144 specimens from North Borneo; while smaller collections were received from Mr. Curtis, Forest Department, Penang (269 specimens); Mr. L. Wray, junior, of the Government Museum, Perak (221 specimens); Mr. J. S. Gamble, Director of the Forest School, Dehra Dun (195); Sir Henry Collett, K.C.B., Peshawar (76). Mr. C. B. Clarke, late of the Indian Educational Department, to whom the Herbarium is already deeply beholden, continued his generous contributions by sending during the year 606 specimens collected by himself, chiefly in the jungles of Manipur and Assam. Mr. Scott-Elliot, a gentleman who has travelled much in the interests of Botany, sent as a contribution from Egypt 121 plants. The Directors of Herbaria in Europe contributed as follows:—Imperial Garden,

Berlin, 849 specimens; Herbarium Imperial Botanic Garden, Vienna, 600 specimens; Imperial Garden, St. Petersburg, 218; Royal Garden, Leiden, 24; while from the University of Melbourne there were received 417 specimens. The recipients of named plants distributed from the Herbarium during the year are to a great extent the same as the donors. A full list of them will be found in the sixth appendix to this report.

4. *Botanical collection.*—Through the direct agency of the officers attached to this Garden the following were received:—

Mr. R. Pantling, orchids of Sikkim	1,500
Mr. G. Gammie, from Independent Sikkim ...	1,021
E. H. Man, Esq., C.I.E., Andamans collections ...	867
Dr. Prain, from North Bengal	68
Native Collectors, Botanical Survey of Burma ...	1,064
Ditto ditto ditto of Assam ...	852

The collections made by Mr. Gammie were the result of a botanical excursion to some of the less known parts of Independent Sikkim and of the Tibetan frontier, on which he was specially deputed with the sanction of Government. They contain many rare plants of much interest. Mr. Gammie was absent for four months. His first excursion extended through the Singalelah Range to its origin in Kinchinjunga. In the vicinity of Kinchinjunga itself Mr. Gammie was, on account of the great inclemency of the weather, able to remain only a few days. He next travelled across Sikkim to Tumloong, from whence he followed up the Tista to Chungtam. From thence Mr. Gammie explored the Lachung valley as far as the Donkia La, which was the northern limit of his travels. He spent two months in forming collections in this valley, and then ascended to Thanka La, and also to Ghora La at the head of the Sebu valley, one of the few tracts in this region which Sir Joseph Hooker was unable to visit during his sojourn in the Eastern Himalaya in 1849-50. From Lachung Mr. Gammie returned to Tumloong; and from thence he traversed the Chola range, visiting the Cho-la, Yak-la, and Zey-lap-la passes. He returned to the cinchona plantation by the military road from Gnatong to the Tista bridge. Mr. Pantling's collections consisted exclusively of orchids, of many of which he has prepared most admirable drawings which I trust it may some day be possible to publish. The collections from the Andamans have been made by two Burmese, who have worked under the supervision of Mr. E. H. Man, C.I.E., whose efforts to help in the exploration of these islands have been most disinterested and laborious, and to whom this garden is very deeply indebted. Native collectors were sent as usual to Assam and Burma, and they brought back fairly good collections of common plants. Owing to my absence on furlough during seven months of the year, no botanical tour was made either by Dr. Prain or myself.

5. *Publications.*—During the year Dr. Prain contributed to the journal of the Bombay Natural History Society a paper on the botany of the Laccadives, founded on a collection of plants made in these islands by Dr. A. Alcock, Surgeon Naturalist to the Indian Marine surveying ship *Investigator*. He also contributed to the Journal of the Asiatic Society of Bengal a paper on the Flora of Narcondam and Barren Island, based on collections made in these islands by himself two years ago. In the same journal Dr. Prain published accounts of a new species of *Mezoneuron* and of two new species of *Pedicularis*. In the Annals of Botany a paper appeared by him on the synonymy of *Anthocoma flavescens;* while in Hooker's *Icones plantarum* he published descriptions and figures of three new species of plants. The fourth volume of the Garden Annals was under preparation during the year, but it will not be ready for publication until the current year. Considerable progress was also made in the preparation of the fifth volume. A paper giving a detailed systematic account of all the members of the natural family of *Anonaceæ* indigenous to British India was published by myself in the Journal of Asiatic Society of Bengal.

6. *Library.*—A few books were purchased and a number were rebound. The whole library was gone over and carefully poisoned with a solution in alcohol of corrosive sublimate, which our experience shows to be by far the best preventive of the ravages of the book maggot.

7. *Interchange of plants and seeds.*—The distribution lists are attached as appendices to this report. They show a total of 13,585 plants and 1,061 packets of seeds received, and of 43,619 plants and 5,072 packets of seeds sent out during the year.

8. *Lloyd Botanic Garden, Darjeeling.*—This branch institution was for the first nine months of the year under the charge of Mr. W. A. Kennedy, and during the remaining three (while Mr. Kennedy was on privilege leave) Mr. G. A. Gammie acted as its Curator. The garden escaped locusts, but suffered slightly from hail.

9. The budget allotments both of the Calcutta and of the Darjeeling gardens were spent almost to the full; as was also a supplementary grant of Rs. 5,000 given for improvements in the former. The estimated revenue for the Lloyd Botanic Garden, Darjeeling, was Rs. 900, and that for the Royal Botanic Garden Calcutta was Rs. 1,000; total Rs. 1,900. This total sum of Rs. 1,900 was revised by the Accountant-General, and raised by that officer to Rs. 2,000, which sum was accepted by Government as estimated revenue for the two gardens for 1892-93. The actual realizations were, for the Darjeeling garden Rs. 785 and for the Calcutta garden Rs. 1,618; total Rs. 2,403.

10. I was absent in Europe on furlough during seven months of the year, and my duties were performed during my absence by Dr. D. Prain. Mr. R. L. Proudlock was Curator, and Mr. G. T. Lane, Assistant Curator of the Calcutta garden during the year. And they as well as Messrs. W. A. Kennedy and G. Gammie in the Darjeeling garden carried on their respective duties to the satisfaction both of Dr. Prain and myself. The head-writer, Babu G. C. Datta, and the office and garden staff have also worked well.

11. Details of the receipts and of the distribution of seeds, plants, and Herbarium specimens will be found in the six tabular returns which are sent as appendices to this report.

RESOLUTION ON THE BUDGET ESTIMATES OF THE COMMISSIONERS OF THE PORT OF CALCUTTA, FOR THE YEAR 1893-94.

No. 1471Marine.

GOVERNMENT OF BENGAL, MARINE DEPARTMENT.

Dated Calcutta, the 15th June 1893.

RESOLUTION.

READ—

A letter No. 3682, dated the 30th March 1893, from the Vice-Chairman of the Commissioners of the Port of Calcutta, submitting for sanction the budget estimates of the Commissioners for the year 1893-94.

A general summary of the budget estimates submitted by the Commissioners is subjoined:—

REVENUE ACCOUNTS.		Estimate for 1893-94.	Estimate for 1892-93.
Receipts.		Rs.	Rs.
Part I.—Jetties	...	11,84,250	12,34,250
„ II.—Inland Vessels' Wharves	..	4,59,000	4,40,000
„ III.—Strand Bank Lands	...	1,68,815	1,70,015
„ IV.—Port or Harbour Master's Department	...	5,07,597	4,96,791
„ VI.—Tramway	...	3,00,000	3,00,000
„ VII.—Port Approaches	...	8,000	6,000
„ VII.—Port dues	...	4,75,000	......
Total	...	31,02,662	26,47,056
„ VIII.—Kidderpore Docks	...	83,000	8,09,000
Special Toll*	...	8,50,000	......
Total	...	40,35,662	34,56,056
Expenditure.			
Part I.—Jetties	...	9,74,914	9,29,852
„ II.—Inland Vessels' Wharves	..	3,85,810	3,84,363
„ III.—Strand Bank Lands	...	98,913	99,539
„ IV.—Port or Harbour Master's Department	...	5,13,352	5,31,224
„ VI.—Tramway	...	2,35,682	2,18,317
„ VII.—Port Approaches	...	4,84,652	4,79,638
Total	...	26,93,323	26,42,933
„ VIII.—Kidderpore Docks	...	13,64,898	10,50,012
Total	...	40,58,221	36,92,945

		Rs.
*Estimated balance on 1st April 1893	...	4,43,030

2. The Kidderpore Docks have not at present been utilized to any extent by the Shipping Companies, and a difficulty has consequently arisen in connection with their working. The subject is receiving the careful consideration of the Government and the Commissioners. The budget estimate as submitted includes a sum which will admit of measures being taken to maintain the water level by pumping, and to keep the gates and sluices in working order, and the machinery and works generally from deteriorating, and in such a state that the graving dock can be used when required. With regard to the Traffic Establishment, provision has been made up to the end of May.

RECEIPTS.

3. PART I.—*Jetties.*—The receipts are taken at Rs. 50,000 less than those of 1892-93. The decrease is due to the general depression in trade. The actual decrease is estimated at Rs. 1,10,000, but an increase is expected in the Petroleum Wharf and Tea Warehouses.

* Not shown in the budget.

4. PART II.—*Inland Vessels' Wharves.*—The receipts are taken at Rs. 19,000 over last year's estimate. The increase is based on actuals.

5. PART IV.—*Port or Harbour Master's Department.*—During the current year the probable receipts from mooring hire were reduced by Rs. 45,000, as it was anticipated that the opening of the docks would take vessels out of the stream. This anticipation not having been realised, the estimated receipts during 1893-94 have been raised to Rs. 2,50,000. As there are reductions on the receipts under certain other heads, the net increase amounts to Rs. 10,806.

6. PART VII.—*Port Approaches.*—The receipts are taken Rs. 2,000 over those of last year's estimate.

7. PART VII.—*Port Dues.*—These are shown in the budget under the head Port approaches, and are expected to produce Rs. 4,75,000.

8. PART VIII.—*Kidderpore Docks.*—The receipts are estimated as follows:—

	Rs.
Receipts from graving dock	75,000
Rent and miscellaneous	2,000
Import	......
Export	......
Dock dues	......
Proportion of receipts for towing vessels by hopper-barges ...	6,000
Total ...	83,000

This shows a decrease of Rs. 7,26,000, as compared with the estimate sanctioned last year. The decrease is due to the fact that the docks have not, as already explained in paragraph 2, been used to the extent which was anticipated when the estimate for last year was sanctioned.

9. The special toll under sections 108 and 109 of the Act is not shown in the Commissioner's budget, but it has been ascertained that the receipts will probably amount to Rs. 8,50,000.

EXPENDITURE.

10. PART I.—*Jetties.*—The estimated expenditure amounts to Rs. 9,74,914 as against Rs. 9,29,852 in 1892-93. The principal items under which there has been an increase are given in the following statement:—

Particulars.	Increase in expenditure.	
	Rs.	
Proportion of Establishment, Working Expenses and repairs to dredgers	13,807	over last year's estimate.
Proportion of salaries of Engineering Establishment	6,602	ditto ditto
Repairs to Jetties, Sheds, Tramway & Compound	46,700	ditto ditto
Working Expenses	7,578	ditto ditto

The increase under the head "Repairs" is due to the provisions for metalling jetty yard, renewing decayed beams and planks on jetty head, and improving the lines in the jetty yard.

11. PART II.—*Inland Vessels' Wharves.*—There is an increase of Rs. 12,087 under this head. Of this sum, Rs. 4,963 is provided under the head "Proportion of Establishment, Working Expenses, and Repairs to Dredgers," Rs. 3,301 under "Proportion of Engineering Establishment," and Rs. 1,445 under "Proportion of Salaries of Traffic Department."

There is a decrease of Rs. 9,200 under the head "Repairs" and of Rs. 1,440 under the head "Working Expenses," the nett increase being Rs. 1,447.

12. PART IV.—*Port or Harbour Master's Department.*—There is, as compared with last year, a decrease of Rs. 17,872 in this estimate. This is due to a decrease of Rs. 11,494 under the head "Proportion of Salaries—Control," and of Rs. 20,220 under "Renewal of Block." There has been several small increases under the various other heads, thus making a net decrease of Rs. 17,872.

13. PART VI.—*Tramway.*—Under the head "Proportion of Salaries of Engineering Establishment" a new provision of Rs. 6,420 has been made. There is an increase of Rs. 2,890 under the head "Proportion of Salaries of Traffic Department," of Rs. 2,188 under the head "Salaries," and of Rs. 5,086 under

the head "Working Expenses." There is a small decrease under two other items, the net increase being Rs. 17,365.

14. PART VII.—*Port Approaches.*—There is an increase of Rs. 5,014 under this head, as compared with the last year's estimate. The principal items of increase are "Proportion of Municipal Taxes and Repairs to Dockyard" and "Working Expenses." Under the first head there is an increase of Rs. 1,001, and under the second of Rs. 3,350.

15. PART VIII.—*Kidderpore Docks.*—The estimated expenditure on the Kidderpore Docks is shown below:—

	Rs.
Proportion of Salaries—Control	26,369
Ditto of Dredger Expenses	26,534
Ditto of Engineering Establishment	19,257
Ditto of Municipal Taxes and Repairs to Dockyard ...	4,820
Ditto of Salaries of Traffic Department	5,745
Salaries of Establishment	22,000
Working Expenses	1,25,173
Interest on Dock loan	11,35,000
Total ...	13,64,898

In this estimate Rs. 22,000 have been included providing for the traffic establishment required for the Docks for two months. The question as to the establishment required for the remainder of the year has been reserved for future consideration.

16. The estimated expenditure on the Kidderpore Docks is thus Rs. 12,81,898 in excess of the receipts, and to make up the deficit the special toll estimated to produce Rs. 8,50,000 has been imposed. As mentioned in paragraph 2 of the Resolution, the Commissioners are considering whether it is not possible to attract traffic to the Docks and so to diminish the heavy drain on the port resources caused by the excess of working expenses over the receipts which, apart from the graving dock, are taken as practically nil.

17. Subject to the remarks contained in the foregoing paragraphs, the Lieutenant-Governor, in pursuance of the powers vested in him by section 71 of the Calcutta Port Act, 1890, approves the estimate of income and expenditure of the Commissioners for the year 1893-94.

By order of the Lieutenant-Governor of Bengal,

C. W. ODLING,

Secretary to the Government of Bengal.

ADMINISTRATION REPORT OF THE BENGAL METEOROLOGICAL DEPARTMENT FOR THE YEAR 1892-93.

No. 2337Agri.

THE following report is published for general information.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

The 15*th June* 1893. *Secretary to the Govt. of Bengal.*

IT has been explained in previous reports that the Government of Bengal has decided that the ordinary Administration Report of the Meteorological Department shall be only a brief summary of the more important facts of each year, but that in every third year the report shall be exhaustive, and shall deal not only with the facts of the year of the report, but with the triennial period ending with that year. The last full report was for the period 1887—90, and two brief reports have since been issued in 1891 and 1892, and hence the present report will be a summary of the work for the three years 1890—93.

During the official year just closed the Department was in my charge, and I was also in charge of the Department for the previous two years, except for a period from April 9th to November 26th, 1890, when I was absent on furlough and when Mr. C. Little officiated for me. The changes in the administration of the Department during the year 1892-93 have been small, and have not involved any alteration in the principles of its working, and they have consisted practically entirely in the gradual development and extension of the system, which has now been introduced for some time, with a view of making it more perfect and more generally useful. Indeed, the same statement may be made with reference to the working for the previous two years also, and no radical changes have been introduced throughout the triennial period.

Observatories.

The number of meteorological observatories submitting reports to the Bengal Meteorological Department on the 31st of March 1893 was 68, or two less than the number at the close of the previous year. This decrease of two observatories was due to the fact that the observer at the voluntary observatory at Kalimpong has declined to work any longer without being paid, and hence the work at that station has been temporarily suspended, though the instruments, shed, etc., are still at Kalimpong. Also in the case of Fort Tregear the observatory, instruments, etc., were destroyed by fire during the year 1891, and the observatory has been closed either temporarily or permanently. On the other hand, on the creation of the new district of Palamau in Chota Nagpur it was decided to commence a meteorological observatory at the head-quarters station of Daltonganj, and hence during the year a new shed was built there and instruments supplied to it, and indeed at the close of the year all the necessary arrangements had been made for this observing station, and observations from it will commence early in the year 1893-94. Thus, it will be seen, there has been little practical diminution in the number of meteorological stations in the province, but that if another voluntary observer can be secured for Kalimpong, the number of observatories will be the same as before, and for the reason that Daltonganj will be a fully equipped observatory, while Fort Tregear was only partially equipped, there will be really a distinct gain.

In connection with this subject it may be remarked that for several years there had been an observatory at Pedong on the Sikkim frontier which had sent in its observations direct to the Meteorological Reporter to the Government of India, and that during the year as Father Desgodins, who was the voluntary observer there, was under orders to proceed to Hong-Kong, arrangements

were made to transfer the instruments to Guntok in Sikkim, under the superintendence of the Political Officer of Sikkim, and when the new observatory is started it will probably be placed under the Bengal Meteorological Department. Father Desgodins by his most accurate and painstaking work at Pedong, which has now extended over a good many years, has laid the Department under a great obligation to him.

The following table will show the names and distribution of the observatories sending in reports to the Bengal Meteorological Office at the close of the year 1892-93:—

1st class observatory.	2nd class observatories.	3rd class observatories.		Voluntary observatories.	Other observatories reporting to the Department, but not under direct control of the Department.
Bengal. Alipore.*	Assam. Dhubri. Sibsagar. Silchar. Bengal. Berhampore. Burdwan. Chittagong. Cuttack. Dacca. Darbhanga. Darjeeling. False Point. Hazaribagh. Patna. Saugor Island. Burmah. Total ...	69	Total ...	70	Total ...	68

* This number includes Vizagapatam.

Work at Meteorological Observatories in 1892-93.

The standard of work at the observatories generally throughout the year has been good, though in a few cases the reverse has been the case, and some stations have done exceedingly badly. So far, however, as can be judged, the quality of the work in 1892-93 has been about equal to, but probably not superior to, that of former years. The two methods by which the character of the work carried on at the observatories is judged, are, first, by the critical examination and comparison of the observations taken at each station with those at neighbouring stations, and when the various observations taken daily throughout Bengal are reduced and charted, the accuracy of this method of comparison or check is very great. The second method of judging of an observatory is naturally by visits of inspection, which are generally arranged so that the observers are quite unaware of the probability of the inspection,

This enables the Inspector to see the observatory in its normal working condition without any previous preparation on the part of the observer, and from this the Inspector can at once judge of the nature of the work which is being sent in from the observatory. In the following remarks both these methods of judgment are kept in view, but the results of the inspections are also separately described later on.

First class observatory.—The only observatory of this class is at Calcutta (Alipore). It is not under the Bengal Meteorological Department at all, but is under the control of the India Reporter, and is under the direct charge of the Second Assistant to the Meteorological Reporter to the Government of India, who is stationed at Calcutta throughout the year. The observations made at the Alipore Observatory are, however, supplied daily to the Bengal Reporter, and have been, throughout the year under review, of a high order of accuracy. As, however, the observatory is not under the control of the Bengal Department, its working cannot be criticized or reviewed.

Second class observatories.—There are fifteen second class observatories under the Bengal Reporter, but of these three are in Assam and one in Burma, and they are, therefore, somewhat difficult to inspect from Bengal. Of the remaining eleven in Bengal, five were visited during the year, namely, Bankipore, Darjeeling, Darbhanga, False Point, and Hazaribagh. The work at these observatories can therefore be tested by both the methods previously described.

In the case of the Bankipore or Patna Observatory, which was visited twice during the year, the instruments were found in good order, and throughout the year the observer has sent in excellent observations. The Darjeeling Observatory was also found to be in good order, and for the greater part of the year sent in very careful and good observations. For a short period, during the absence of the regular observer on leave, the work was not very trustworthy, as the officiating observer was either somewhat careless or he did not thoroughly understand his work. Darbhanga, when visited, was found to be only in fair condition. The observations sent in from Darbhanga throughout the year have been good, and hence this station is now working fairly satisfactorily, and is in great contrast to its condition as described in 1890-91. In the year 1891-92 a decided improvement had taken place in this observatory, and the improvement has not only been maintained in 1892-93, but its condition in this year has been much better than in either of the two previous years. A visit was paid to False Point in April 1892, and the observatory was found to be in most excellent order, and its condition reflected great credit on both Mr. Sparkes, the superintendent, and on Mr. Naylor, the observer. The observations during the year have also been most carefully and accurately made, and the only point on which perhaps a little more care ought to be taken is in the accurate framing of the weather telegrams. It is highly satisfactory to find that the False Point Observatory is kept up to such a high standard, for this forms one of the most important stations in the working of the Storm Signal Service. Hazaribagh was visited in March 1893, and was also found in very good order. Throughout the whole year the observer at this station has done excellent work, and his observations are always very reliable.

The condition of the remaining six second class observatories in Bengal, of the three in Assam and one in Burma, can only be judged by the critical examination of the observations sent in, as it was found impossible to visit them. Taking the Bengal stations first, Berhampore has well maintained the reputation gained in previous years of being one of the most trustworthy stations in the province, and throughout the year the observations submitted by Babu Mahendra Nath Roy have been extremely accurate. The same may also be stated of Burdwan, which is one of the most satisfactory observatories in Bengal, and the observer, Babu Mokhoda Prosad Roy Chowdhury, takes the greatest care in his work, and his observations are most trustworthy. The observatory at Chittagong, on the other hand, has not been so satisfactory, and for a considerable portion of the year inaccurate observations were frequently submitted, and altogether the observatory gave a good deal of trouble. Indeed, for the last three years the Chittagong observatory has been in an unsatisfactory condition. In 1890-91 and 1891-92 more mistakes were made by the observer at Chittagong than at almost any other observatory in Bengal, and careless work was again submitted in the earlier part of this year. During the later months of 1892-93,

however, a new observer has taken charge of the Chittagong Observatory, and since his arrival the accuracy of the work has greatly increased, and the observatory appeared at the close of the year to have again been in satisfactory condition. The observations sent in from Cuttack during the year have been good, though not of the exceptional accuracy of some of the other stations. Dacca has sent in particularly good observations throughout the year, and its condition has been, so far as can be judged, excellent. In the case of Saugor Island, which is, again, one of the most important stations in the working of the Storm Signal Service, scarcely a single error has been detected throughout the year, and this observatory continues to maintain its position as one of the three or four most satisfactory observatories in Bengal. On every occasion when extra observations are required during stormy or suspicious weather, they are sent in most promptly, and in consideration of the large amount of extra work which is thrown on this observatory, an allowance of Rs. 15 a month was granted to a signaller in the Saugor Island Telegraph Office for helping in the meteorological work. This allowance was granted from 1st June 1892.

In the case of the three Assam stations, Dhubri has continued to send in very accurate observations throughout the year, and the observatory has maintained its previous reputation. In the case of Sibsagar, however, which was formerly one of the most satisfactory stations in the province, there has been a great falling off. So far as can be judged without a visit of inspection, the observer there now appears to be extremely careless in his work, for his observations neither agree with those of the other stations in Assam made at the same time, nor do they at all agree with observations made under similar circumstances at Sibsagar for many previous years. It also appears probable that the barometer and perhaps other instruments have been allowed to get out of order; and during the year a new barometer was sent to that station, and comparative sets of observations with three barometers were allowed to go on for some months. Up to the present time, however, the exact cause of these errors has not been ascertained, and it is believed they are mainly due to the want of attention and to the carelessness of the present observer. The condition of the Silchar Observatory has been fairly good throughout the year, and the observations generally sent in have been accurate.

For some years the observers at Sibsagar and Silchar have been paid small monthly allowances for taking observations of earthquakes. The seismographs, however, which were provided by the advice of the Geological Department, have not answered their purposes at all satisfactorily, and they practically never record earthquake shocks even when unusually severe. Hence the allowances for the charge of these instruments were withdrawn towards the close of the year.

In the case of the Akyab Observatory in Burmah, the observations which have been sent in throughout the year have been fairly accurate, and, so far as can be judged, the observatory is in very good condition.

Third class observatories (including the observatories at the coast ports in the Bay of Bengal, directly under the Bengal Reporter, and one or two others reporting for the Storm Signal Service).—Twenty of the observatories under this head were visited during the year, and of these fourteen were in the province of Bengal and six were on the coast of Madras, at stations which report observations in connection with the Storm Signal Service. Taking up, first, the case of the observatories that were visited, Barisal Observatory in previous years had been in charge of a subordinate in the Public Works Department; but as the office of that department in the station was closed, the observatory was transferred to the signaller attached to the local post and telegraph office. In May 1892 the station was visited to complete the removal of the instruments to the post office, and on the inspection the instruments and observatory generally were found to be in very bad condition. The observations sent in, too, from Barisal were very carelessly made almost throughout the year. Buxar when visited was found to be in excellent order, and throughout the year the observations have been very accurate. Chaibassa was in good condition when visited; but the barometer had gone out of order, and hence the observations submitted from this station were untrustworthy, to a great extent probably, from the defect in the barometer. Chapra was found in excellent condition, and the observations sent in have been accurate for practically the whole year.

Dinajpur when visited was in fair order, and the observations sent in have only been of tolerable quality. Gaya was visited and was, as has been the case in previous years, not in satisfactory order, and the observer is still careless in his work and sends in poor observations. It has been found necessary to change the site of the Gaya observatory, as a new masonry erection over a well has been built close to the thermometer shed and rain-gauge, and the exposure of the thermometers and rain-gauge had been thus entirely altered, and in the case of the rain-gauge it was quite overshadowed by the new building, so that it was absolutely impossible for rain coming from certain directions to get to the gauge at all. Jalpaiguri at the time of inspection was in moderate order only, and a good many mistakes have also been made in the observations sent in. Jessore when visited was, on the whole, in good condition, and the observations sent in during the year have been accurate. Krishnagar Observatory was in excellent condition when inspected, and the observer, Babu Peari Lal Ghosh, has sent in very accurate observations. Motihari was generally in very good order, but the observations sent in were only fairly accurate. Muzaffarpur, as in the case of previous inspections, was found in bad order when visited, and the observer, Babu Jogendra Chandra Chatterjee, takes apparently no interest whatever in his work. His observations have also been decidedly inaccurate throughout the year. He was fined Rs. 5 for his carelessness and for the bad condition in which he has kept the observatory. Noakhali when inspected was in fair order, but the observations sent in were very unreliable, and it was found that the observer did not take his observations at the correct time. Hence the old observer was dismissed and a new man appointed on probation. Purnea has given great trouble during the greater part of the year, and the observer was one of the most incompetent, and the observatory generally was about the worst in the whole of Bengal. The man was fined, and his pay was finally stopped for two months; but it was only when a new observer was appointed to the station that the observations became at all reliable. Rangpur when visited was found in moderately good order only, but on the whole the observations sent in during the year have been satisfactory.

In the case of the six stations on the Madras coast which were visited during the year, Coconada was found in most excellent order, and has sent in most accurate observations throughout the year. The condition of the observatory reflected great credit on the superintendent, Captain Wickes, and on the observer, Mr. C. Gaëtane. Cuddalore was in fair order only, and the observations recorded have been of moderate accuracy. Gopalpur has sent in very accurate observations in almost all cases. The observatory at Madras stationed at the Port Office, was also in very good order when inspected, and the observations have been also accurate, and the same is the case with Nellore which was visited by the Madras Meteorological Reporter.

In the case of Vizagapatam, a visit was paid to that station in April 1892; but the observatory being a voluntary one entirely unconnected with the Department, it was not inspected in the ordinary way, but the Reporter was courteously shown over it by the proprietor, Mr. Narsingrow. It is much to be regretted that since this visit Mr. Narsingrow has died rather suddenly; but the observatory is still being maintained and carried on by his son Mr. Juggarow. By the death of Mr. Narsingrow a loss has been created, for Mr. Narsingrow had for many years done most excellent voluntary work in meteorological matters in connection with the Meteorological Department.

The other observatories were not able to be visited during the year 1892-93, and hence it is only possible to judge of their condition by the observations sent in. Excellent observations have been submitted by Bogra, Gnatong, Midnapore, Naya Dumka, Pamban, and Tavoy; good work has been submitted by Arrah, Balasore, Bankura, Bassein, Comilla, Malda, Mymensingh, Rampur Boalia, Ranchi, and Sirajganj. Rather indifferent work, with a considerable number of mistakes, has been submitted from Puri; while very bad and untrustworthy work has been sent in from Dehri and Faridpur.

Raniganj Observatory, on the whole, has not worked satisfactorily throughout the year, and at present it is in temporary charge of the nazir of the Subdivisional Officer's Court. The subordinate of the Medical Department who had formerly charge of the Raniganj Observatory, gave absolutely no satisfaction, and at the request of the Medical Department he was relieved of the work. Up to the present time, however, it has not been found possible to make

satisfactory permanent arrangements. When inspected in March 1892, the Raniganj Observatory was found in fair order.

In the case of Dehri, which has now been sending in bad work for the past three years, the fact was reported to the Bengal Government, and it was suggested that the medical subordinate at that station, who is the meteorological observer, should be removed to some other station, and this is about to be carried out.

Owing, also, to the abolition of the Dacca Division of the Public Works Department during the year, the observatories at Faridpur and Mymensingh, which were formerly superintended by officers of that Department, had to be transferred—at Faridpur to the superintendence of the District Engineer, and at Mymensingh to the superintendence of the Chairman of the District Board.

Voluntary observatories.—The work done at the voluntary observatories is generally reviewed separately; but in the case of the most important of them, Vizagapatam, it has already been referred to. Gnatong, which was at first a voluntary observatory, is now paid, and has also been discussed. In the case of Shortts' Island, the observer, Mr. Tasker, continues to send in most valuable observations, particularly in the case of stormy weather, and he was awarded Rs. 60 during the year from the Storm Observation Fund by the Meteorological Reporter to the Government of India for his excellent work. In the case of the other three voluntary observatories, Tura, Demagiri, and Lungleh, the observations which have been sent in have been of comparatively little value, as they appear to be generally very carelessly taken.

While considering the subject of the work done at the observatories, it will be desirable to mention that the system by which inward-bound vessels passing Saugor Island telegraph to the Calcutta office the meteorological observations taken daily on board the Pilot vessels at the Sandheads by means of a single hoist of four flags, has continued to answer very satisfactorily, and the code devised for this purpose is working very well. The number of such telegrams received during the year was 343. It will, however, be seen that there would be many days in the year on which the observations from the Pilot brigs as sent in this way would not reach the Meteorological Office. Hence special post-card forms were prepared during the year, and one of these is filled up daily on board the Pilot brigs with the day's observations, and these are despatched to Calcutta by the first inward-bound steamer after the observations are made. These, therefore, serve not only to complete the record of the observations made at the Sandheads, but the post-cards also serve as a check on the accuracy of the telegraphic messages which are received.

In addition, too, Mr. Marshall, the special Pilot of the British India steamers running between Calcutta and Rangoon, has favoured the Department throughout the year, by telegraphing to Calcutta from Rangoon a description of the weather experienced on the voyage. These telegrams have been sent for the greater part of the year by a code which was, in the first instance, prepared for telegraphing the description of the weather in the Bay from the Calcutta office to Rangoon, Madras, etc. A brief reference to this code was made in the Administration Report for 1889-90, and it is again referred to later on under the head of the daily reports. The thanks of the Meteorological Department are due to Mr. Marshall for his valuable aid.

During the year under review also the Hon'ble J. L. Mackay, of Messrs. Mackinnon, Mackenzie and Company, the managing partner of the British India Steam Navigation Company, suggested that the captains of their vessels navigating the Bay of Bengal would be willing to aid the Department by telegraphing the nature of the weather they had experienced on their reaching port. The offer was gratefully accepted; and the code referred to in the last paragraph was taken as the basis to work on. It was then specially modified to meet the circumstances of such voyages; and the system was then introduced in January 1893. In the case of vessels reaching such ports as Madras, Calingapatam, Gopalpur, Rangoon, etc., after having passed across the Bay of Bengal, the captain of the vessel telegraphs to the Calcutta office a complete description of the weather he has experienced, one or two code words being sufficient to describe the weather on each day of observation. In the case, too, of a vessel reaching Calcutta, similar information is supplied to the Meteorological Office, but by specially prepared post-cards instead of by telegraph. This system has now been in force for several months, and has worked very smoothly

and successfully, and very valuable information is thus received. The Meteorological Department is thus very much indebted to Mr. Mackay for his help in this matter.

Mr. Mackay has also further favoured the Department during the year by the great assistance he gave during a tour of inspection by the Bengal Reporter, and also on another tour by the India Reporter. It will be seen under the head of the inspection of observatories that during the year I inspected most of the observatories on the west coast of the Bay which report in connection with the Storm Signal Service, and it was only by the great courtesy of Mr. Mackay and of Captain Phillips of the S.S. *Chindwara* that I was able to visit all these observatories when travelling up the Bay in the same steamer, every facility being given, under Mr. Mackay's orders, for the landing at each port where there is a meteorological observatory and for the inspection required. In this way also Mr. Mackay has again conferred a great favour on the Meteorological Department.

Names of observers.

In connection with the previous criticism of the work sent in from the various observatories, a table is given below showing the names of the observers at all the observatories in Bengal, and for the sake of comparison the table has been completed for the triennial period. In this table also the allowance drawn by each observer is stated, and from the last column can be seen the exact class of work done at each observatory, *i.e.*, whether only one observation at 8 A.M. is taken daily, as indicated by "A," or whether three sets of observations at 8 A.M., 10 A.M., and 4 P.M. are taken, as indicated by the letter "B," etc. A complete statement of the work at the observatories is therefore indicated in the last column of this table:—

In order, also, that it may be seen at a glance what has been the character of the work at the various observatories working in connection with this Department for the past three years, the following table has been prepared, and the work in each year has been classed under the four headings of "very good," "good," "moderate," and "very bad." It will be seen that such observatories as Berhampore, Burdwan, Coconada, Dhubri, Hazaribagh, and Saugor Island have been in the front rank throughout the three years, with such observatories as Akyab, Bogra, Buxar, False Point, Gopalpur, Jessore, Krishnagar, Midnapore, Naya Dumka, Nellore, Pamban, Patna, and Silchar running them very close; while, on the other hand, the observatories at the following stations have been very bad or bad almost throughout the three years:—Chaibassa, Chittagong, Comilla, Dehri, Faridpur, Gaya, Muzaffarpur, Noakhali, Purnea, and Raniganj:—

Table showing the general character of each observatory and of the work sent in from it during the triennial period 1890—93.

Inspection of observatories.

The following observatories were inspected during the year 1892-93:—

Bankipore (twice).
Barisal.
Buxar,
Chaibassa.
Chapra.
Coconada.
Cuddalore.
Darjeeling.
Dinajpur.
Darbhanga.
False Point.
Gopalpur.
Gaya.
Hazaribagh.
Jalpaiguri.
Jessore.
Krishnagar.
Madras (Port Office).
Motihari.
Muzaffarpur.
Nellore.
Noakhali.
Purnea.
Rangpur.
Vizagapatam.

Of these, two were inspected by Lala Hem Raj, the Personal Assistant to the Meteorological Reporter to the Government of India, viz.—

Chaibassa and *Purnea ;*

three by Mr. Gilliland, the then Officiating Assistant Meteorological Reporter to the Government of India, viz.—

Noakhali, | *Barisal,* | *Jessore;*

one by Miss Pogson, Meteorological Reporter to the Government of Madras, viz., *Nellore;*
six by Mr. Little, Assistant Meteorological Reporter to the Government of India, viz.—

Patna, *Muzaffarpur,* | *Motihari,* *Hazaribagh,* | *Chapra,* *Darbhanga,*

and the rest by myself.

The following is the result of inspection of the observatories. They are arranged according to the class of observatory, *i.e.*, into second class and third class, and also alphabetically.

Second class.—*Bankipore* was visited by me on the 31st October 1892. At the time of my inspection I found the bulbs of the wet bulb hygrometer and the wet minimum thermometer almost dry. This was due to observer's not using a sufficient number of threads and to his not keeping the water bottles full of water. In other respects the observatory was in a satisfactory condition. It was again inspected by Mr. Little, Assistant Meteorological Reporter to the Government of India, on the 18th March 1893. He remarks:—"The observer is well able to do the work, and seemed to be very reliable. I examined the clerk of the medical school who takes the readings when required. He also knew how to read the instruments accurately."

Darjeeling was inspected by me in October 1892, when the observatory was found in a satisfactory condition. A large number of comparative readings of the observatory barometer and the standard taken from Calcutta showed that the correction of the observatory instrument has slightly changed, having decreased from +·022″ to +·013″.

Darbhanga was inspected by Mr. Little in March 1893, when he found the observatory in good order.

False Point was inspected by me in April 1892. The instruments were all in good condition. Mr. Sparkes, the Lighthouse-keeper, takes great interest in the meteorological work. Mr. Naylor, the observer, understands his work well, and takes the observations quickly and accurately. The observatory is an excellent one for forecasting purposes. The only drawbacks are the slightly defective exposure of the wind instruments to north-east and the distance of the lighthouse (where the observatory is situated) from the sea, which renders it practically impossible to give the condition of the sea.

Hazaribagh was inspected by Mr. Little on 14th and 15th March 1893. He found the instruments all in good order. The observer was punctual in taking his observations, and seemed thoroughly able to do the work required of him.

Third class.—*Barisal* was visited by Mr. Gilliland (the then Officiating Assistant Meteorological Reporter to the Government of India) in May 1892. The primary object of the inspection was the removal of the barometer from a godown belonging to the Public Works Department. The barometer was removed to a room of the local post-office. The observer, who is a signaller of the Barisal Post-office, was also thoroughly trained. At the time of Mr. Gilliland's inspection, the observatory was found to be in a very bad condition. The instruments were found all dirty and neglected, and the bulb of the wet bulb thermometer thickly encrusted in dust. Grass had grown up all round the rain-gauge to a height of 6 inches to 8 inches above the top, and some of the blades were found actually overhanging the mouth of the rain-gauge.

Buxar was visited by me on the 31st October 1892, when the observatory was found to be in a very satisfactory condition. The observatory keeps up its good reputation under the observer, Babu Baikanta Nath Guha.

Chaibassa was visited by the Personal Assistant to the Meteorological Reporter to the Government of India on 21st January 1893. The chief object of the visit was to ascertain the cause of persistent discrepancies found in the barometric readings reported by the observer. The comparative readings which the Personal Assistant took of the observatory barometer and the standard instrument taken from Calcutta, disclosed the fact that the correction of the observatory barometer had changed considerably. The former correction was —·005″, while it had changed to +·015″, *i.e.*, a difference of ·020″ had taken place.

Chapra was visited by Mr. Little on 20th and 21st March 1893. The instruments were all found in good condition. The observer could read the barometer accurately but slowly.

Coconada was visited by me in April 1892. This was the first time that this observatory was visited by an officer of the Meteorological Department since its establishment in 1880. The observatory is situated at the Port Office, about ¾ mile from the sea, and there are only a few single-storied buildings and trees between the sea and the Port Office. The site is a good one. The barometer is suspended in the Port Officer's room in very good light. It was clean, perpendicular and in good condition. The shed instruments were all clean and in good condition. The wind instruments are on a mast and platform to the north and east of the Port Office. The anemometer is placed on the highest part of the erection, and the wind vane is to the west of the anemometer. The observer is sharp and intelligent, and does his work quickly and accurately. He keeps the observatory and the instruments in excellent order, and I was much pleased both with the observatory and with the observer. Captain Wickes, the Port Officer, takes the greatest possible interest in the work of the observatory, and hence keeps it in excellent condition. There is telephonic communication with the lighthouse, and by this the state of the sea, which is reported in the weather telegrams, is ascertained daily.

Cuddalore was visited by me on the 14th April 1892. The barometer is placed in the sorting room of the post and telegraph office in a cage; but it is in bad light, and it is very difficult to read it correctly. The mercury in the cistern was very much oxidized, and the whole scale for reading the instrument was almost black with oxidation. The instrument was therefore changed by another barometer. The thermometer shed, which is outside the postal and telegraph office, is surrounded on all sides by high trees, and hence the

exposure is by no means satisfactory. The wind instruments are placed on the roof of the post-office, but the position is not at at all satisfactory, as there are high trees on all sides (except to the west). The exposure of the wind instruments and the thermometer shed is hence very objectionable. The condition of the wet bulb hygrometer and the wet minimum thermometer was far from satisfactory, as the muslin and thread were dirty and the bulbs were encrusted. The tube of the funnel of the rain-gauge was found almost choked up. The observer, though careless in several respects, was found to be intelligent, and seemed to understand his work well.

Dinajpur was visited by me on the 21st October 1892, when I found the instruments in good condition except the dry minimum thermometer, which had a deposit of one degree of spirit in the upper part of the tube. The observer was found to have finished his 8 A.M. observations considerably before 8 o'clock, probably soon after 7-30 A.M. The observer was severely reprimanded for this want of punctuality. The correction of the barometer was found to have changed from +·009″ to +·018,″ and this new correction was adopted from 1st January 1893.

Gaya was visited by me on the 30th October 1892. The barometer was found out of the perpendicular and the thread and muslin attached to the bulbs of the wet bulb thermometer appeared not to have been changed for a considerable time. A small new pucka erection—the Grierson memorial well—has been built to the east of the observatory at about 15 yards distance, thus affecting the exposure of the shed to a very large extent. Another site was selected in consultation with the Civil Surgeon, Gaya, and arrangements made to remove the shed to the new site as soon as possible. The position of the rain-gauge also was extremely bad, and it was arranged to remove it to another site.

Gopalpur.—An attempt was made to visit this observatory on the 22nd April 1892. On arrival at Gopalpur the surf was running very high, and it was quite impossible to land the standard barometer in safety. Hence the inspection could not be made.

Gopalpur itself is almost entirely on the seashore. About 20 or 30 miles inland there is a range of rather high hills which extend perhaps 30 or 40 miles to the north of the station, when they appear to cease. The height of these hills, I should think, is at least 4,000 feet in parts, and they would form an obstacle in the path of a storm, and would probably tend to deflect it northwards.

The position of the observatory and of the anemometer could be seen from the steamer. The anemometer is at the end of the pier and has a splendid exposure, and the observations at this station ought to give early and reliable indications of any bad weather in the Bay by the change of wind direction and by wind velocity, &c.

Jessore was visited by Mr. Gilliland on 28th May 1892. With the exception of the dry minimum thermometer, which had a small deposit of spirit behind the brass fastener at the end of the tube, all the instruments were in fairly good condition. The regular observer was on leave, and the officiating man was examined by Mr. Gilliland and found to be intelligent, punctual, and to know his work well.

Jalpaiguri was visited by me on the 7th October 1892. The instruments were all in good condition. The wind vane, however, was wrongly fixed, as the north pointer was about 15° to the west of true north. This defect has since been remedied.

Krishnagar was visited by me on the 6th October 1892, when the observatory was found to be in a very good condition. The wind vane was found to have become utterly useless, and was replaced by a new one sent from Calcutta.

Madras (Port Office) was visited by me on the 11th, 12th, and 13th April 1892. The barometer is in a pucka room of the Port Office on the third storey. The thermometer cage is under a wooden-roofed verandah, freely exposed to the sea-breeze. The wind instruments are on a staging above the barometer room, and are therefore at a very considerable elevation above the ground. The instruments which are in use at the observatory were found to be in good order and very clean. The observer is sharp and reads his instruments accurately

and quickly. The Officiating Port Officer, Captain Creagh, takes great interest in the work of the observatory.

Muzaffarpur was visited by Mr. Little on 23rd March 1893. He remarks:—"The dry thermometers were in good order. The thread and pieces of cloth of the wet thermometers were dirty and no doubt partially dry when the observer began to take the readings. As I approached the shed, he poured some of the water from the bottles over the bulbs, and almost immediately took the readings. The bottles were dirty, the water being discoloured by green fungus, and the bulbs were encrusted. The anemometer seemed to be in want of oil. There was no receiving bottle within the rain-gauge. A bottle that the observer said had been sent with the instruments must have been intended for the rain-gauge. I put it in." As the result of this inspection, the observer was fined Rs. 5 for his want of attention to the work.

Motihari was visited by Mr. Little on the 22nd March 1893. The bulb of the wet bulb thermometer was slightly encrusted. The wind vane is old and was found to be useless. Everything else was in good order.

Nellore was visited on the 6th, 7th, and 8th August 1892 by the Meteorological Reporter to the Government of Madras. The barometer was found defective and was changed by another. Miss Pogson thus speaks of the observer:—"Mr. Conn, the Telegraph Master, reads and takes his observations most carefully and accurately, and is, in my opinion, one of the best and most conscientious observers. The general condition of the observatory was most satisfactory and highly creditable to Mr. Conn."

Noakhali was visited by Mr. Gilliland on the 24th May 1892, when he found all the instruments (except the anemometer) in good order. When taken to pieces the anemometer was found perfectly clean, but the horizontal shaft was not fixed true in its bearings, and the upper brass cylinder enclosing the vertical steel rod which carries the cups, was not quite vertical. The defects were remedied. The observer was taking his time from the telegraph office clock, which was about 30 minutes fast.

Purnea was visited by the Personal Assistant to the Meteorological Reporter to the Government of India. He remarks:—"The jail hospital assistant does the work of observation. He had never had any proper training in the work, and was hence reading the barometer and anemometer by erroneous methods. The columns of the spirit thermometers were broken into fragments and the observer, although aware of the defects, did not know how to rectify them." The observations of this observatory were very unsatisfactory for some time past, and the result of the inspection shows that the erroneous readings were due to the ignorance of the observer as to the proper method of reading the instruments.

Rangpur was visited by me on 22nd October 1892. The condition of the anemometer was extremely bad, as it was not oiled for more than 11 months. The dial plate was loose and the shot was firmly fixed on the cup by hardened oil. The bulb of the wet bulb thermometer at its bottom was badly encrusted. The bottle was only half full of water, and the muslin and thread were dirty, as they had not been changed for some time. His method of measuring rainfall was also incorrect. The observatory was therefore in a very bad condition when inspected.

The following table will show the observatories which have been inspected in each of the three years 1890—93. Twenty-five visits of inspection were made in the year 1890-91; in the following year twenty-three visits of inspection only could actually be made, one of them being made by the Madras Reporter; and in 1892-93, twenty-six inspections were made, as indicated previously. The number of inspections made is certainly not so large as is desirable, but, as pointed out in previous Administration Reports, it is practically impossible to do more than is done. The Bengal Reporter, who is mainly responsible for inspecting the Bengal stations, is also responsible for warning the ports all round the Bay of Bengal of the occurrence of storms throughout the year, and hence he can only leave Calcutta during the brief intervals when severe storms are not expected. In addition to this the Bengal Meteorological Reporter is only a

the college vacation, and further only during the parts of the vacation when weather is fairly settled in the Bay of Bengal:—

Under the circumstances explained previously it will be seen that the work of observatory inspection by the Bengal Reporter is attended with considerable difficulty. Hence it is necessary to state that, during the triennial period under review, the observatories in the following table, which are under the direct control of the Bengal Meteorological Reporter, have not been inspected. Of these observatories, Chittagong, Comilla, Faridpur, and Sibsagar are in urgent need of inspection:—

List of observatories that could not be inspected during the past three years.

Akyab.	Saugor Island.	Tavoy.
Balasore.	Faridpur.	Pamban.
Burdwan.	Midnapore.	Dhubri.
Chittagong.	Mymensingh.	Sibsagar.
Comilla.	Naya Dumka.	Silchar.
Dacca.	Sirajganj.	

Instruments issued.

The number of instruments broken or allowed to get out of order may be looked on as a test of the care with which an observer does his work. Hence a table is appended

below showing the various instrumemts which have been issued to all the observatories undér the control of the Bengal Reporter during the past three years :—

List of instruments issued to the Observatories in Bengal and Assam during 1890-91, 1891-92, *and* 1892-93.

A.—Instruments supplied during 1889-90, but observatory started from 1890-91; hence this is shown in this return.

* New equipment.

Rainfall stations.

A large amount of attention has been paid to the rainfall-recording stations in Bengal during the past year with a view of improving the registration and of filling up gaps which had previously existed.

The following new stations were started during 1892-93:—

District.	Station.
Cuttack	Pal Labara.
Midnapore	Panskura.
Chittagong	Kodala. Fenoa. Mirsarai. Chandpur.

District.	Station.
Backergunge	Daulat Khan.
Monghyr	Chakai Bamda. Chapraon.
Dumka	* Belbodda.

The total number of rainfall stations in Bengal on the 31st March 1893, was 276.

Considering the number of stations which record rainfall only, the following figures will show the steady increase which has taken place in their number during the past six years:—

Year.	Stations.	Year.	Stations.
1887-88	250	1890-91	257
1888-89	255	1891-92	267
1889-90	258	1892-93	276

It was stated in the Administration Report for 1891-92 that a system of inspection of rain-gauge stations had been introduced, under which various District Officers, Magistrates, Deputy Magistrates, Civil Surgeons, etc., when on tour in their districts inspect the rain-gauges and report the results of the inspections in form in which definite questions have to be replied to direct to the Meteorological Office. During the year 1892-93, 58 rain-gauge stations have thus been inspected, and in the majority of cases the rain-gauges have been found in good order. In other cases defective instruments were found, which have been changed, and in some the exposure of the sites of the rain-gauges was bad, and these have also been changed. In addition, too, during the past year, the officer in charge of each rain-gauge in the province was required to fill in the answers to a considerable series of carefully prepared questions as to the dimensions of the rain-gauge and the accuracy of its measurements and of the measuring glass used with it, and also questions dealing with the site and exposure of the instrument. A rather large number of defective instruments and of extremely bad exposure of rain-gauges are thus brought to light, and in all cases, as far as possible, these defects have been remedied, and it is hoped that the registration of rainfall is now on a satisfactory footing.

The daily and weekly rainfall returns have been received from these very numerous stations with very commendable punctuality throughout the year, and, so far as can be judged by the critical examination of the figures sent in, the statistics are in almost all cases fairly accurate and reliable.

Departmental reports.

On the whole there has been no practical change in the nature of the reports issued during the past year from those in former years. These reports consist of those issued daily, weekly, monthly, and yearly, and of certain special reports.

Daily reports.—Two daily reports are issued by this office—the first, which deals with the meteorology of the Bay area only, is published daily throughout the year, Sundays and holidays included. This report contains the 8 A.M. observations made at twenty-eight stations round the Bay, and it is lithographed and consists of a chart representing the Bay area with isobars, &c., the reduced observations received from the twenty-eight stations, and also a brief report as to the character of the weather. The report is lithographed in the Meteorological Office, and is issued daily at about 10-45 A.M. Absolutely no change has been made in this report during the past year, and it was issued to thirty subscribers paying Rs. 6 per quarter, and to forty-seven Government officers without charge. There was a small balance of Rs. 429-15-0 in connection with the fund on account of this report at the close of the offical year (1892-93).

This report is maintained specially with reference to the working of the Storm Signal Service, and it is on these observations that the storm forecasting work is carried on. After the report has been written, special telegrams are

* Mohagama was abolished and Belbodda started in its place.

dispatched to the various ports describing the weather in the Bay on that day at 8 A.M. Two classes of messages are sent; first, by means of a specially prepared code, the general weather conditions, the wind direction and velocity, the state of the sea, and the changes in barometric pressure are telegraphed for each of eight sections into which the Bay has been divided, to such ports as Rangoon, Madras, Negapatam, and Coconada throughout the year, and to Akyab and Chittagong also during certain seasons of the year. In the case of Chittagong, which is newly added to this list, the Port Commissioners of that place asked to be supplied with this information from 15th of May to 15th November in each year, and the Commissioners obtained the sanction of the Government of Bengal to defray the cost of the telegrams from the port funds. The first of these telegrams sent to Chittagong was despatched on November 3rd, 1892.

This code was modified and improved very considerably during the year, and by the modification much fuller information can be given than was previously the case. The code is indeed now working very satisfactorily.

Further weather information is also sent by telegram immediately after the preparation of the daily report to certain stations. This information is sent by a new code which was described in the previous Administration Report, and is used to communicate weather information to ships at a distance from the shore. Each flag in the commercial code of flags has been given a distinctive meteorological meaning, and the Bay has been divided for the purpose of this code into four sections, and by telegraphing the designation of four flags or by hoisting four flags at any signal station, any passing vessel within view of these flags is able to ascertain the state of the weather in each of the four sections of the Bay. Telegrams giving this information are now daily sent to Saugor Island, Madras, and Rangoon. The first use of this code was made at Saugor Island on 1st May 1892, and since that date every vessel which passes out to sea is supplied by the flag signals with a knowledge of the weather conditions of the whole of the Bay. If the vessel passes out at about 11 A.M. or later, it receives a statement of the weather in the Bay on the same day at 8 A.M.; but if the vessel is proceeding to sea before 11 A.M., the information provided will have reference to the previous day. At first this plan was tried experimentally for six months, but it gave so much satisfaction to the commanders of vessels, pilots, etc., that it has, with the usual courtesy of the Telegraph Department, been made a permanency. In order, also, to carry out this system, the Port Commissioners of Calcutta provided the four sets of flags required for the signalling purpose at Saugor Island, and also from the 1st of April 1893 they will pay an allowance of Re. 1 per month to each of the five menial servants or khalasis at Saugor Island who are engaged in the duty of hoisting the flags to the passing vessels. This system of flag signalling has proved most successful.

The second daily report deals with the province of Bengal and Assam, and this was published during the past year from 24th April to 12th November. The only changes made in this report were two in number. In the first place advantage was taken of the opening of a telegraph office at Naya Dumka to add this station to those already included in the report. In addition, too, when Gnatong was converted from a voluntary station to a regular paid observatory, the daily observations were ordered to be telegraphed to Simla for the India Weather Report and to Calcutta for inclusion in the Bengal Report. The first telegram was sent in on 1st October 1892. This report, therefore, now includes daily telegraphic observations from one of the highest telegraphic and meteorological stations in the world.

During 1892 this daily report was circulated to 16 subscribers, each paying Rs. 2-8 per month, and also to 106 Government officials, who receive the report free of charge. It was mentioned in the last Administration Report that, at the request of the Calcutta Chamber of Commerce, a scheme had been submitted to that body for improving the daily report issued by this office by, to a great extent, amalgamating the two daily reports above described, and by providing certain additional information for the tea and indigo districts. It appears, however, that the proposal did not meet with approval, for up to the present time the Chamber has taken no further action in the matter, and has indeed not expressed its opinion on the scheme at all.

In the case of the weekly and monthly reports published in the *Calcutta Gazette* and of the Annual Report on the Meteorology of Bengal published in the Bengal Administration Report, there have been no changes to record, except that Gnatong has been added to the list of reporting stations; and in the case of these reports, and also of the two daily reports, they have been printed and published at the required dates and periods, without any failure whatever, throughout the whole year.

A summary of the meteorological condition during the monsoon season of 1892 was also published in the *Calcutta Gazette*, and monthly charts, representing the various rainfall statistics throughout the monsoon season, have been submitted to Government and furnished to the Sanitary Commissioner.

Storm signals.—The working of the system of storm signals has remained quite unaltered during the past year and, indeed, during the triennial period the only change introduced was the extension of the storm-warning system to Narayanganj in November 1891. The signals selected for that port are similar to those in use at Chittagong and at the Orissa ports, and these significations were arranged to be also almost similar in character.

The year 1892 was on the whole not a stormy one, and there was only one very severe storm and one rather severe storm. The first was noticeable as forming in the extreme north-west angle of the Bay in the first ten days of June, and for becoming rather rapidly of great severity though small in diameter. It first advanced in a northerly direction, and it at one time appeared probable that it would advance direct up the Hooghly to Calcutta; but it changed its direction to the north-west or west on nearing the land, and struck the coast about midway between Saugor Island and Balasore. It then recurved and veered rapidly away in a west-north-westerly direction. It gave a small storm wave on the Balasore coast.

The second storm of note occurred in October, and was also decidedly severe though small. It was remarkable for the great rapidity with which it crossed from the east to the west of the Bay, the average velocity equalling about 18 miles an hour. It struck the coast near Coconada, and it was also remarkable for the almost complete absence of any indication of its approach towards the west coast of the Bay.

The other storms occurring during the year were generally of minor importance.

The dates of the principal storms and barometric depressions occurring during the year are given in the first of the two following tables, and the action taken in the matter of issuing storm warnings and hoisting storm signals is indicated in the second of these tables:—

Table giving a brief statement of the storms which affected the Bay of Bengal coasts during the year 1892.

No. of storm.	Period of depression or storm.	Character of storm.	Coast affected.
1	May 24th to 26th ...	Two feeble depressions forming, one north of the Andaman Sea, and the second off Orissa coast; both disappearing on reaching the coast.	Burma coast and Orissa coast, r pectively.
2	June 7th to 11th ...	Small storm formed off South Orissa coast, moving northwards and intensifying rapidly into a severe cyclone in the north-west angle of the Bay. It reached the land between Saugor Island and Balasore.	Bengal and Orissa coasts.
3	July 4th to 10th ...	Small storm forming off the Ganjam coast, intensifying moderately and advancing north-westward, crossing the coast near Balasore on the 10th.	Orissa coast.
4	August 24th and 25th and 28th to 31st.	Slight to moderate depression forming off the west coast of Bay, crossed the coast near Puri.	Ditto.
5	September 9th to 10th ...	Small storm formed off the Orissa coast, crossed the coast south of False Point on the 9th.	Ditto.

No. of storm.	Period of depression or storm.	Character of storm.	Coast affected.
6	September 21st to 22nd ...	Small storm formed in centre of Bay, moving slowly westwards, passed inland between Coconada and Masulipatam on the 21st.	Madras coast.
7	October 16th to 17th ...	Shallow depression overlying centre and south of Bay, moving towards Madras coast; crossed coast near Nellore on the 17th.	Ditto.
8	Do. 18th to 20th ...	Small but severe storm forming probably in Andaman Sea near Burma coast, marching westwards rapidly towards the Circars coast near Coconada on the 20th.	Burma and Madras coast.
9	Do. 27th to 29th ...	Moderate barometric depression advancing to west coast in west-north-west direction, intensifying slowly, reaching the coast between Nellore and Masulipatam.	Madras coast.
10	November 28th to December 3rd.	Barometric depression in centre of south of the Bay, advanced towards the west coast, but filled up before it reached the land.	South Madras coast.

Table showing the action taken by the Calcutta Meteorological Office in warning the coasts affected by the storms enumerated in the previous table.

Office establishment.

The Meteorological Office staff has remained practically unchanged throughout the year. The Head-clerk, Babu Fanindra Mohan Basu, has continued to superintend the office in a most efficient manner, and under his able superintendence the office has worked very smoothly and very efficiently, and this has enabled the numerous reports, returns, maps, etc., published by this Department to be issued punctually and with great regularity throughout the year.

METEOROLOGICAL OFFICE;
CALCUTTA,
The 25th April 1893.

ALEX. PEDLER, F.R.S., F.I.C., F.C.S.,
Meteorological Reporter to the Government of Bengal.

REPORT ON THE CALCUTTA MEDICAL INSTITUTIONS FOR THE YEAR 1892.

MUNICIPAL DEPARTMENT—MEDICAL.

No. 2089Medl.

Calcutta, the 19th June 1893.

RESOLUTION.

READ—

The Report on the Calcutta Medical Institutions for the year 1892.

Read also—

The Report for the year 1891 and the Resolution recorded upon it.

During the year 1892 the public health was slightly better in the town of Calcutta and the amalgamated area than in the previous year, which was one of unusual mortality throughout the province; the general death-rate in those two areas having been 27·1 and 34·8 respectively, against 27·9 and 39·4 in 1891. In Calcutta the number of deaths from cholera, bowel-complaints, and fever show a decrease, while those from small-pox and other causes show a slight increase. In the amalgamated area also cholera, fever, and small-pox appear to have been less prevalent, but mortality from bowel-complaints and other causes was greater than in the previous year. In Howrah the recorded death-rate has risen from 18·29 to 23·68, the increase being distributed over all the heads except small-pox and other causes. The deaths from cholera and fever increased by 281 and 369 respectively, the number of deaths from cholera having been greater than in any of the previous ten years.

2. The following table shows the number of indoor and outdoor patients treated in all the hospitals and dispensaries of the metropolis during the past two years :—

Name of Institution.	1891. Indoor. Number treated.	1891. Indoor. Daily average.	1891. Indoor. Number of beds available.	1891. Outdoor. Number treated.	1891. Outdoor. Daily average.	1891. Total number of patients treated, both indoor and outdoor.	1891. Total number of deaths among indoor patients.	1891. Percentage of deaths on total number of indoor patients treated.	1892. Indoor. Number treated.	1892. Indoor. Daily average.	1892. Indoor. Number of beds available.	1892. Outdoor. Number treated.	1892. Outdoor. Daily average.	1892. Total number of patients treated, both indoor and outdoor.	1892. Total number of deaths among indoor patients.	1892. Percentage of deaths among total number of indoor patients treated.

The total number of outdoor patients treated is larger by 6,954 than in 1891. The increase is said to be due to the opening of an outdoor dispensary attached to the Campbell Hospital, in which no less than 11,470 patients were treated. There has been a falling off in the number of in-door patients which was insignificant everywhere except in the Campbell Hospital, where the numbers receded from 9,088 to 8,551 owing to the opening of the out-door dispensary mentioned above. In the Police and the Mayo Hospitals there was a decrease of 423 and 128 respectively. All the other institutions, however, received a larger number of in-patients than in the previous year.

3. Of the total number of persons treated during the year, 154,492 were adult males, 37,707 adult females, and 59,784 children, against 153,705, 34,678, and 56,753 respectively in 1891. The statistics according to race show that there was an increase of all classes of patients except Hindus. The increase of European patients is said to be due chiefly to the increased population of the port, brought about by the stagnation of trade and the large number of vessels detained in the river, and to the popularity of the out-door department of the Eden Hospital. The number of Hindu patients decreased in all the hospitals except Howrah, the total falling off being 3,155; but the year 1891 showed an advance of 7,297 upon the figures of 1890, and the fluctuation in 1892 is probably fortuitous.

4. The rate of mortality among the inmates of the medical institutions was practically the same as in several past years, viz., 12·7 per cent. The death-rate as usual was highest in the Campbell and Howrah Hospitals, where pauper and moribund cases are sent for treatment. The death-rate among children was lower than that among adults which is 60 per cent. higher than the average rate of English Hospitals.

5. There was a slight increase in the small-pox cases treated in the hospitals, the numbers being 35 against 21 in the previous year. All of these cases were admitted in the Campbell Hospital and 10 of them proved fatal. This the Inspector-General of Civil Hospitals thinks is indicative of the absence of protection by vaccination in at least half the number of cases. In order to afford grounds for further conclusions, the Lieutenant-Governor desires that the number of patients who can be seen by their marks to have been vaccinated, or inoculated, or to have had small-pox, and the proportion of deaths among them, should be stated in future reports. Results so remarkable have been obtained from observation of an outbreak of small-pox in the Dacca Jail during 1892, that His Honour desires that particular attention should be given to recording the past medical history of small-pox patients, and the previous efforts, if any, made to protect them. Seven hundred and nine persons were admitted to hospital during 1892 suffering from cholera, which in 425 cases proved fatal, giving a ratio of nearly 60 per cent. The mortality among European patients treated for this disease was higher in the General Hospital than in that attached to the Medical College. The Lieutenant-Governor is glad to find that there were no cases of cholera among the patients in the Presidency General and the Campbell Hospitals, but the Medical College and the Howrah General Hospitals did not enjoy this immunity, 6 and 4 cases respectively having occurred in those institutions. These cases are said to have been due chiefly to contaminated food obtained by the patients from outside the Hospital. There was a considerable decrease in the admissions for dysentery and diarrhœa, but the mortality shows a higher percentage. Malarial fever also was responsible for fewer admissions than in the previous year, though it is by far the most common disease in the Lower Provinces. The number of cases of venereal disease rose from 11,886 to 13,072. The Inspector-General of Civil Hospitals remarks that the "statistics of the Presidency General Hospital are significant of the greater prevalence of syphilis in the quarters frequented by European sailors." The figures produced in the report, however, show that the increase is slight, and there is a decrease in cases of secondary syphilis compared with the average of the last five years. The admissions for leprosy fell from 134 to 94, of whom all but six were received in the Campbell Hospital. Dr. Pilcher objects to the treatment of lepers in the same ward with other patients, chiefly, it is understood, on account of the loathsomeness of the disease, for the danger of contagion according to the conclusions of the Leprosy Commission is very small, and he suggests that, when the new Leper Asylum is opened, they should not be admitted to the hospitals. If, however, the hospitals were closed to them, and they were all forced into the Leper Asylum, the accommodation which it is proposed to provide in that institution would be quite insufficient. The total number of cases of enteric and remittent fever treated in all the hospitals during the year was 12 and 1,215 respectively against 26 and 1,188, the corresponding figures of the previous year. Of the 12 cases of enteric fever, 6 are shown as having occurred in the Medical College Hospital, 5 in the Presidency General Hospital, and 1 in the Howrah General Hospital. The

absence of this disease from the institutions, where only native patients are received, is noticeable, especially in connexion with the belief entertained by some that the natives of this country are to a great extent free from this disease. But Dr. Pilcher remarks that this does not set aside the conviction of many careful European and Native observers that enteric fever often attacks natives of this country. The difficulty of distinguishing it from remittent fever renders any definite opinion on this subject at present impossible. The Surgeon-General with the Government of India recently enjoined extreme care in the diagnosis of the disease, in the hope that some day the key to the difference between the two diseases may be found.

6. The total number of major operations performed in all the institutions shows an increase of 1,182. The increase is said to be due in a great measure to a common class of operations (tapping for hydrocele) which have hitherto been classed at the Medical College Hospital as minor operations having under recent orders been included under this head. It is satisfactory to notice the general reduction in the percentage of death after operation from 4·5 to 3·78, and the fact that in the Howrah General Hospital it fell from 8·23 to 3·01. This result is said to be due to the care and thoroughness with which the details of antiseptic surgery have been carried out. The number of dental operations performed was 2,362 against 2,275. There was a considerable increase in the number of Europeans who sought relief for dental diseases, while the number of Eurasians fell from 894 to 760. This result hardly bears out the remarks made in paragraph 45 of the report for 1891, that the teeth of mixed are more prone to decay than those of unmixed races.

7. In the Eden Hospital 1,609 women and children were treated against 1,811 in the previous year. Of these, 832 were Europeans, 746 Hindus or Mussulmans, and 31 belonged to other classes. The daily average attendance of Europeans shows the large decrease of 33 per cent. The reduction in the number of admissions of European and native patients is attributed by Dr. Joubert to the opening of the out-door department. There were 28 deaths among Europeans and 67 among natives, as compared with 32 and 65 of the previous year. The number of confinement cases rose from 501 to 542, the mortality among this class of cases being 26 against 21 in 1891. The number of cases of septicæmia also rose from 24 to 31, giving a percentage of 5·7 on confinements as against 4·7 in 1891: of these 21 proved fatal. These figures show that the precautions reported as having been taken against the occurrence of this disease have unfortunately not had much effect, and the Lieutenant-Governor would again dwell on the necessity of using all possible means to minimize the chance of its appearance or extension in the hospital. His Honour has already suggested that isolation is the best way of treating it, and if funds can be provided, the necessary steps will be taken to erect a separate ward for the treatment of this disease.

8. The steady increase in the number of out-patients treated in the Shama Churn Law Eye Infirmary points to the growing popularity of the Institution. The principal operations performed were extraction of lens, iridectomy and excision of the eye-ball. The operations for cataract were successful in 61 per cent. of the cases which compares unfavourably with the results in the Howrah Hospital, where the operations were successful in 87 per cent. of the cases treated.

9. In the Ezra Hospital, which is intended chiefly for the sick of the Jewish persuasion, 1,555 out-patients and 350 in-patients were treated, the daily average attendance being 10·6 and 16·91 respectively against 12·63 and 16·73 in 1891. These low figures hardly bear out the Inspector-General's remarks that the Institution has fulfilled the beneficent object of its founder.

10. The nursing arrangements of the Medical College and General Hospitals continue to work satisfactorily: grateful testimony to the efficiency and skill of the nurses is frequently received, and the Lieutenant-Governor desires to place on record his appreciation of the good work done by them. Two trained European nurses have been employed in the Howrah General Hospital, but they are not connected with the Hospital Nurses' Institution. Fourteen pupil nurses and eight pupil dhais passed out of the Eden Hospital.

11. The invested capital belonging to the hospitals remains the same as in 1891, viz., Rs. 5,83,000, of which more than half belongs to the Mayo Institu-

tions. The following statement shows the income and expenditure of the metropolitan hospitals during the past two years :—

	1891.	1892.
Income.	Rs.	Rs.
Opening balance	16,289	17,020
From Government	3,21,845	3,15,296

" Diet	1,12,221	1,28,717
" Miscellaneous charges ...	75,786	78,100
" Buildings and repairs ...	66,776	36,842
Invested during the year ...	10,000	10,714
	4,79,443	4,83,770
Closing balance ...	17,020	16,809
Total ...	4,96,463	5,00,579

The receipts from paying patients and the miscellaneous receipts are this year shown separately for the first time, which accounts for the apparent falling-off in receipts from Local Funds.

The total income excluding the opening balance amounted to Rs. 4,83,559 against Rs. 4,80,174, and the total expenditure excluding the amount invested was Rs. 4,73,056, which exceeded the amount expended in 1891 by Rs. 3,613. The increase was distributed over all the heads of expenditure except repairs and buildings. The cost to Government shows a reduction of Rs. 6,549, while the receipts from local sources increased by Rs. 9,934, chiefly owing to larger receipts from the Port Dues Fund and from paying patients. In the Medical College Hospital the cost of diet increased by Rs. 5,070-4-11, which is said to be due to higher rates and larger issues of diet. The average cost of the daily diet was annas 7-2¾ for Europeans, and annas 3-3⅚ for natives.

12. In the Resolution on the report for 1891, the Lieutenant-Governor commented on the variations in the cost of diet at the different hospitals, and on the absence of any explanation of the fact. The matter has not been lost sight of during the year past, and it has been shown that the circumstances of the different institutions vary so materially that uniformity in the matter of average expense is very difficult to attain. In the Presidency General Hospital the patients are all Europeans, and a considerable number are paying patients. In the Howrah General Hospital and in the Medical College Hospital both Europeans and natives are treated. In these circumstances, it will be sufficient to publish side by side the average cost of diet of European and native patients at each institution, and the Lieutenant-Governor relies on the Inspector-General to keep the expenditure under this and other heads to the lowest point compatible with complete efficiency. There has been an advance in the cost of

native diet everywhere, and in that of European diet at the Medical College Hospital only.

13. In the Medical College Hospital a new latrine block has been erected, and improved arrangements have been made for the supply of drinking water. Two rooms were constructed for the Registrar's office and the Medical officer's board-room, and other minor improvements have been effected. All of them were much needed, and the Lieutenant-Governor is glad that they have been carried out.

14. The existing provision for meeting the medical wants of the town has more than once been declared to be insufficient by the Local Government, and this opinion was endorsed by the Government of India in July 1892. Accordingly, after the close of the year under review, a Committee was appointed to report on the necessity for providing further accommodation and the localities where it should be afforded. They have suggested the establishment of a hospital at Bhowanipur, and four out-door dispensaries in Wards Nos. 3, 19, 20, and 22 respectively: their proposals have received the full assent of Government, and the difficulty of providing funds for the work alone retards is commencement.

15. The report brings into striking prominence the insignificant extent to which the medical charities of Calcutta are supported by voluntary contributions. Out of a total income of rather more than five lakhs of rupees, as much as Rs. 3,15,000 were contributed by Government, while the subscriptions from Europeans and Natives aggregated only Rs. 11,818 and Rs. 1,371 respectively. In other words, out of every Rs. 100 spent in 1892 on the Medical Institutions of Calcutta, the proportion voluntarily contributed by those whose countrymen form 81 per cent. of the patients treated was less than five annas. The Lieutenant-Governor would be glad to see part of the great stream of native charity turned into this most useful channel.

16. The thanks of the Lieutenant-Governor are due to Surgeon-Colonel Pilcher for a clear and concise report, and for the promptitude with which it has been submitted.

By order of the Lieutenant-Governor of Bengal,

J. A. BOURDILLON,

Offg. Secretary to the Government of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 17th June 1893.

	No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.					
BURDWAN DIVN.	1	Burdwan	June 17, '93	2·73	Weather—hot with occasional heavy showers. Cultivation of *aus* and jute going on. *Aman* being sown. Fodder and water sufficient. Prices of common rice:— Srs. Burdwan ... 10 to 13; Kalna ... 10 to 13; Katwa ... 12½; Raniganj ... 12½ } per rupee.
	2	Bankura	„ 17, '93	3·70	Weather—cloudy and rainy. Sowing still going on. Transplantation has commenced in places. Fodder and water sufficient. Price of rice 11 seers per rupee both at Sadar and Vishnupur.
	3	Birbhum	„ 17, '93	4·23	Weather—cloudy and rainy. The heavy rain has retarded sowing to some extent. Fodder and water plentiful. Price of rice 12 to 14½ seers per rupee.
	4	Midnapore	„ 17, '93	2·44	Weather—showery. Prospects of crops fairly good. Prices of common rice:— Srs. Sadar ... 11; Contai ... 13; Tamluk ... 10; Ghatal ... 10 to 11 } per rupee.
	5	Hooghly	„ 17, '93	2·51	Apparently the rains have broken. There is rain daily, and the weather is gradually growing cooler. Jute, *aus* and sugarcane doing very well. Transplantation of *aman* is likely to be very early this year, and is said to have already commenced in places. Prices of common rice:— Srs. Sadar ... 10 to 11; Serampore ... 10 to 11½; Jahanabad ... 10 to 12½ } per rupee.
	6	Howrah	„ 17, '93	2·19	Weather—wet and fairly cool. Rains have commenced. Ploughing and paddy sowings going on. Condition of cattle good. Fodder and water-supply ample. Price of rice 10 to 11 seers per rupee.
PRESIDENCY DIVN.	7	24-Parganas	„ 17, '93	1·39	Weather—seasonable, cloudy and hot by turns with showers of rain. The rain has been general throughout the district, heaviest in the south. It has done good to the crops on high lands. Ploughing and sowing greatly retarded in the Diamond Harbour subdivision owing to excessive rain. Condition of cattle good. Supply of fodder and water sufficient. Price of common rice varies from 11½ to 13½ seers per rupee.
	8	Nadia	„ 17, '93	3·31	Weather—hot between showers. Prospects of all crops good. Prices stationary. Fodder and water sufficient.
	9	Khulna	„ 17, '93	1·60	Weather—bright and hot in the early part of the week; cloudy towards the end. Cultivation of *aus* and *aman* in full swing. Coarse rice selling at 10¾ to 13 seers per rupee. Fodder and water for cattle sufficient.
	10	Jessore	„ 17, '93	1·68	Weather—seasonable. Cultivation of *aus* and *aman* going on. Young paddy and jute plants looking well. *Til* being harvested. Fodder and water plentiful. Prices stationary.
	11	Murshidabad	„ 17, '93	5·41	Weather—hot and generally cloudy with occasional heavy showers. Harvesting of *boro* paddy finished and that of indigo has commenced. Sugarcane, *mulberry* and *bhadoi* are promising. Common rice sells at 11 seers per rupee. Fodder available for cattle. Condition of cattle generally good.

Division	No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concld.*					
CHITTAGONG DIVN.	12	Chittagong	...	...	Report not received.
	13	Noakhali	...	...	Report not received.
	14	Tippera	June 17, '93	1·86	Weather—variable: at times hot and steamy, at others cool with wind and rain. Harvesting of *til* nearly finished. Sowing of paddy going on. Condition of *aman* paddy and jute promising.
	15	Chittagong Hill Tracts.	...	...	Report not received.
DACCA DIVN.	16	Dacca	„ 17, '93	0·55	Weather—hot. Prospects of standing crops good. Fodder available. No cattle-disease. Common rice selling at from 9 to 12 seers per rupee.
	17	Faridpur	„ 17, '93	0·77	Weather—hot. Standing crops doing well. Sowings nearly completed. Common rice sells at 11 seers per rupee. Cattle get fodder, but cattle-disease prevails in two thanas of Madaripur.
	18	Backergunge	„ 17, '93	2·62	Weather—seasonable. State and prospects of crops fair. Common rice selling at from 9 to 12 seers per rupee. Fodder and water sufficient.
	19	Mymensingh	„ 17, '93	4·56	Weather—cloudy and hot with occasional rain. Rivers rising. Prospects of *aus* and jute good. Lands are being cultivated for sowing *rowa* paddy. Common rice sells at from 11 to 13 seers per rupee. Health of cattle good. Fodder available.
RAJSHAHI DIVN.	20	Dinajpur	„ 17, '93	5·53	Weather—hot and rainy. Rain daily. Standing crops doing well. Ploughing for *haimanti* in progress. Jute and *bhadoi* have been sown to the extent of 16 annas. Price of rice at Sadar 12 seers per rupee; that at Thakurgaon 11 to 13 seers. Cattle continue to be in good condition. Fodder and drinking water plentiful.
	21	Rajshahi	„ 17, '93	4·05	Weather—very rainy and sometimes very hot. There has been too much rain. It rains every day. Paddy in the lowest lands is being much injured. Where low lands have not been sown early, they must remain fallow this year owing to submersion. Jute and sugarcane are flourishing. There is no cattle-disease. Fodder and water are plentiful. Price of rice varies from 11 to 13½ seers per rupee.
	22	Rangpur	„ 17, '93	9·30	Weather—cloudy with heavy rain in the early part of the week. Low land *aus* is being harvested. Prospect continues favourable. Prices steady.
	23	Bogra	„ 17, '93	4·10	Weather—unsettled with heavy showers. Cultivation of *aman* goes on. Prospects unaltered. Common rice sells at 12 seers per rupee. Fodder and water sufficient.
	24	Pabna	„ 17, '93	1·47	Weather—hot and showery at times. Prospects of standing crops on high lands continue good. During his recent tour in Sara outpost *elaka* the Collector discovered that about 2 annas of the paddy land there could not be sown with *aus* and that the *aus* on 2 annas of the low land has been damaged by continual rainfall. Price of common rice at Pabna 11¼ seers per rupee and Rs. 4 to Rs. 5 per maund at Sirajganj. Fodder and water-supply sufficient.
	25	Darjeeling	„ 17, '93	2·10	Weather—*In hills*:—Cloudy sky. Misty and showery off and on. *In Terai*:—Cool with constant and heavy rain. *In the hills*:—*Bhutta* and *bhadoi* paddy coming up well. Potato plants flowering. *Phaphur, chota marua, kangni* and *shama* progressing favourably. Lands being prepared for *aghani* paddy. *In the Terai*:—State and prospects of crops good. Prices of coarse rice:— Srs. Hills ... ... 10 } per rupee. Terai ... ... 11 } per rupee.
	25	Jalpaiguri	„ 17, '93	4·24	Weather—cool and cloudy. Prospects of *bhadoi* and jute favourable. Common rice sells at 11½ seers per rupee. Fodder and water-supply sufficient. No cattle-disease reported.

	No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR.					
BHAGALPUR DIVN.	27	Monghyr	June 17, '93	1·99	Weather—cloudy with occasional showers. *Makai* and *marua* thriving well. Rain has done good to standing crops. Indigo doing well. Plenty of fodder and water. Prices of common rice :— Srs. Sadar ... ... 13 to 15; Begusarai ... ... 14; Jamui ... ... 13½ } per rupee.
	28	Bhagalpur	„ 17, '93	1·82	Weather—cool and cloudy. The rains appear to have broken yesterday (16th). Prospects favourable. Sowings of *makai* are nearly complete. Price of common rice 13 seers 14 chitaks per rupee.
	29	Purnea	„ 17, '93	2·54	Weather—monsoon weather; fairly cool. Farming operations forward. Weeding of *bhadoi* in progress. State of *bhadoi* and of *aghani* seedlings very satisfactory. Fodder and water abundant. Price of rice remains at 12 seers per rupee at Purnea and Kishanganj, but has increased from 16 to 15 seers per rupee at Araria.
	30	Malda	„ 17, '93	4·36	Weather—cloudy with occasional heavy showers. Rainy season has commenced. Harvesting of *boro* rice completed. *Bhadoi* rice coming into ear. The seasonable rainfall has improved the prospect of *bhadoi* crops. Indigo is being cut in some places; the outturn is expected to be better than last year. Common rice selling at from 11 to 14½ seers per rupee. Supply of fodder sufficient.
	31	Sonthal Parganas	„ 17, 93	5	Weather—cool and rainy. The rains appear to have set in. Ploughing, sowing and planting of all crops going on. *Boro* harvest being completed. Price of rice 10½ to 13 seers per rupee. Fodder and water ample.
PATNA DIVISION.	32	Patna	„ 17, '93	1·36	Weather—cool and occasionally cloudy. Rain has benefited sownig of *bhadoi* crops. *Makai* is being sown and has germinated in some places. Transplantation of *marua* has commenced in Bihar subdivision. Sugarcane looks well. Swarms of locusts were seen in the Bihar subdivision on the 13th instant, but no damage was done. Prices of common rice :— Srs. Patna ... ... 15; Barh ... ... 13½; Bihar ... ... 17; Dinapore ... ... 12½ } per rupee.
	33	Gaya	„ 17, 93	1·65	Weather—unsettled monsoon weather during latter part of week; very hot and humid before that. *Bhadoi* crops and paddy being sown, and transplanting of *marua* millet begun. Sugarcane very promising. Prices generally stationary. Water and fodder-supply ample. Three straggling flights of locusts passed over the district, but did very little damage.
	34	Shahabad	„ 17, '93	0·63	Weather—cloudy with occasional sunshine and cool. Ploughing for *bhadoi* in progress. Sugarcane doing well. Fodder and water abundant. Prices stationary.
	35	Darbhanga	„ 17, '93	1·42	Weather—cloudy with high east wind. The rainfall of the week has facilitated cultivation of *bhadoi* crops. Paddy and indigo also much benefited by the rain. Prices remain stationary. Fodder and water abundant.
	36	Muzaffarpur	„ 17, '93	1·62	Weather—cloudy with east winds. Paddy, *makai* and *marua* are being sown. Standing crops doing well. Recent rain has done much good to crops. No disease among cattle. Supply of fodder and water sufficient.

	No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR—*concld.*					
PATNA DIVISION—*concld.*	37	Saran	June 17, '93	1·33	Weather—east wind, cloudy and rainy. Standing crops benefited by the rainfall. *Cheena* being harvested in many places. *Bhadoi* sowings begun. Mango crop plentiful towards North-West. Fodder and water plentiful. Prices of common rice :— Srs. Sadar ... ... 13 } per rupee. Siwan ... ... 12 } Gopalganj ... ... 13 }
	38	Champaran	„ 17, '93	5·38	Weather—cool for the time of year. Paddy and *makai* being sown. *Cheena* has been reaped. Prices nearly stationary. Fodder and water sufficient.
ORISSA.					
ORISSA DIVN.	39	Cuttack	„ 17, '93	2·87	Weather—showery. Sowing of *beali* and *sarad* in progress. Supply of fodder and water sufficient. Prices of common rice :— Srs. C. Srs. C. Cuttack ... ... 10 8 to 13 2 } per rupee. Jajpur ... ... 16 0 to 18 6 } Kendrapara ... ... 14 0 to 18 6 } Banki ... ... 15 8 }
	40	Puri	„ 15, '93	1·30	Weather—cloudy with rain at intervals. Lands being cultivated for *sarad* crop and in places being sown. Miscellaneous crops doing well. Price of rice stationary.
	41	Balasore	„ 17, '93	4·56	Weather—very stormy. The country is thoroughly waterlogged by the heavy rainfall of the last month. Cultivation and sowings are impeded and rice seedlings much damaged. A good spell of dry weather is greatly wanted. Prices of rice :— Srs. Balasore ... ... 13 } per rupee. Bhadrak ... ... 15 }
CHOTA NAGPUR.					
South-West Frontier Agency.					
CHOTA NAGPUR DIVN.	42	Hazaribagh	June, 17, '93	1·83	Weather—seasonable : cloudy and showery. Prospects of sugarcane good. Mango indifferent. Ploughing and sowing in vigorous progress all over the district. Fodder and water sufficient. Prices of common rice :— Srs. Head-quarters ... ... 9 to 12 } per rupee. Giridi ... ... 9 to 12 }
	43	Lohardaga	„ 17, '93	3·00	Weather—rainy. Ploughing and sowing of winter rice continue... Common rice selling at 12 seers per rupee. Fodder and water sufficient.
	44	Palamau	„ 16, '93	0·66	Weather—unsettled. Rain in almost all parts of the district. *Bhadoi* ploughing in progress. Cattle-disease in some parts. Prices stationary. Fodder and water sufficient.
	45	Singhbhum	„ 17, '93	3·52	The rains have apparently set in. All crops in good condition. Prices stationary. No cattle-disease.
	46	Manbhum	„ 17, '93	2·19	Rains have apparently set in. A few days' warm dry weather wanted. Prospects so far fair. Prices stationary. Fodder and water-supply sufficient.

* Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period
The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 01
rainfall the normal mean are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station
district, *i.e.*, from total rainfall at the subdivisional stations in the district sending in returns divided by the number of stations. A rainy day is one of

for the week ending Saturday, the 17th of June 1893.

Variation from normal mean.	Mean 8 A.M. temperature.	Average humidity at 8 A.M.	Average cloud amount at 8 A.M.	Rainfall of week at observing station. for the last ten years. The variations are *negative* when the mean for the week is less than the corresponding normal mean, and *positive* when greater. The numbers denoting cloud amount represents the part of the sky covered the whole sky being denoted by 10. Under the head District observations of for the period in question during the past ten years. The means of the district are the numerical average of the rainfall returned received in the which at least a tenth of an inch fell.

Statement of Rainfall in Bengal for the week ending Saturday (8 a.m.), the 17th of June 1893.

Meteorological Division.	District.	Station.	RAINFALL. Sunday, 11th	Monday, 12th.	Tuesday, 13th.	Wednesday, 14th.	Thursday, 15th.	Friday, 16th.	Saturday, 17th.	Total number of rainy days.	Rainfall of week.	Average rainfall of week.	Total rainfall since 1st of month.	Average total rainfall from 1st of month.	Total rainfall since 16th May 1893.	Average rainfall from 16th May to date.

Explanation.—... indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inches of rain has fallen.

CALCUTTA, *the 20th June 1893.*

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 17TH JUNE 1893.

THE most noticeable feature of the weather during the past week is the recommencement of south-west monsoon conditions. This was brought about by a disturbance which had been forming for some days during the previous week in the south of the Bay, and which at the beginning of the present week was probably causing squally weather in the extreme south. The depression steadily developed, wind velocity increased daily at Diamond Island, but pressure changes were very small at all the coast stations. The depth of the depression and the intensity of the disturbance were to a large extent due to the very high and increasing pressure in Bengal and the north of the Bay, and the effect of this was seen in the rapidity with which the disturbance moderated when the high pressure began to give way. On the 12th the low pressure area covered the greater part of the Bay, and within that area readings were below 29·65 inches, but at the coast stations there was no defect. On the following day the distribution was almost the same, there being a slight fall in the south of the Bay and a slow increase in the north, but on the 14th the fall became brisk in Madras and the Circars, and the depression was shown as over the west of the Bay. This was followed on the 15th by a very rapid fall in the Circars, and some time in the night of the 15th the depression crossed the coast between Coconada and Vizagapatam. By the time the centre reached the coast there was every sign that the depression was becoming more diffused and at the same time filling up. Under these conditions the stormy weather moderated very rapidly, but for two or three days afterwards strong winds and a rough sea prevailed along the west coast as far south as Masulipatam.

While the depression was still over the sea, showery weather was being experienced in many parts of Bengal. But this rainfall was caused by local thunderstorms and was consequently scattered and irregular. On the 13th in Orissa, and on the 13th and 14th in most of the other districts, there was a marked falling off in the rainfall, the showers being neither so heavy nor so general, but after the depression crossed the coast, and winds became more southerly, ordinary monsoon weather became general in all districts except North Bihar, where only scattered showers were received up to the end of the week. During the first two days southerly winds prevailed in Lower Bengal, but as the depression developed, these southerly directions changed to east, and the circulation in Bengal formed part of the cyclonic system in connection with the depression.

It is remarkable that the setting in of the monsoon weather in Bengal should have become established at a time when pressure was considerably above the normal in all districts. Throughout the week there was a large excess in places, and at one time it was almost as much as a quarter of an inch.

Pressure.—As just stated, pressure readings were above the normal throughout the week, and steadily increased till the last two days, when they fell moderately fast. Means are everywhere above the normal by amounts between ·1 inch and ·15 inch except in Orissa, where excess is less than ·1 inch.

Temperature.—Owing to the cloudy weather which was fairly general, temperature was below the normal in all districts except East Bengal and latterly part of North Bengal, where there was a small excess. The largest defect was in Chota Nagpur, where it was steadily 5° or more, and from there it diminished in all directions. The means for the large divisions are below the normal by amounts ranging from 1° in North Bengal to 5·9° in Chota Nagpur, except in East Bengal, where there is excess of nearly 1°.

Rainfall.—As the depression never was near the province, rainfall during the week was fairly evenly distributed. Though occurring in most districts as local showers, the amounts were at times rather heavy, and only two districts have received less than their normal falls. These are East Bengal and North Bihar; the defect in the latter is only a fifth of an inch, but in East Bengal it is as much as 2·99 inches. The two districts which were most under the influence of the disturbance are Orissa and Chota Nagpur, where there has been excess of 1·07 inch and 1·54 inches respectively. In South-West Bengal, North Bengal and South Bihar the falls are almost normal.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 17th of June 1893:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1893.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week.	Variation.	Average.	Normal average.	Average.	Normal average.

The total fall from 1st January to 17th June 1893	26·08
The average fall of the corresponding period for 24 years, Surveyor-General's Office	15·90

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

●, overcast ; g, gloomy ; d, drizzling rain ; p, passing temporary showers ; t, thunder ; <, lightning.
